SATURDAY - - - - SEPT. 20, 1873.

AGRICULTURAL DEPARTMENT.

WONDERFUL SALE OF "SHORT HORN" CATTLE.

Over Forty Thousand Dollars for a Cow, &c.—The most remarkable sale of cattle ever made in this country took place at New York Mills, three miles from Utica, New York, on the 10th instant, comprising the herd of Duchess and Oxford breeds belonging to Hon. S. Campbell. The sale attracted the most prominent short horn breeders of the world, including representatives from the great grazing sections of Kentucky, Illinois, Ohio, Minnesota, Canada, England and Scotland. About five hundred people were present, including all the American breeders and the following from England: Right Hon. Lord Skelmersdale, whose seat is near Liverpool; Mr. Halford, of Papillon Market Harbor; Mr. Calthrope; Mr. Richardson, who represents Sir Curtis Lampson, of Sussex; Mr. Berwick, agent for Lord Dunmore, but who buys for Earl Bective, recently Lord Kenlis, of Underley Hall, Lancashire, and Mr. Kello, agent for Mr. R. Pavia Davis, of Horton, Gloucestershire; also Messrs. Cochrane, Christie, Miller, and Beattie, of Canada.

The Duchess family, headed by that noble three-year old bull, Second Duke of Onedia, came first in the sale. He was no sooner presented than Lord Skelmersdale offered $10,000. This was quickly followed by offers of $11,000 and $12,000, and he was sold to Mr. Thomas J. Megibben, of Cynthiana, Ky. Next came First Duchess of Onedia. The bidding started at $15,000 and quickly ran up to $30,000, after which bids of $100 more were made until she was sold to Lord Skelmersdale for $30,600. A beautiful yearling, Seventh Duchess of Oneida, was next offered. The bids started at $5,000 and quickly went up to $19,000, at which sum she was sold to Mr. A. J. Alexander of Kentucky. After her the Tenth Duchess of Geneva came into the ring. The bidding started at $500, ran quickly up to $30,000, and then, by smaller bids, to $35,000, at which she was taken by Lord Bective, through Mr. Berwick. Several fine animals followed at high prices, some to cross the Atlantic.

The culmination of the intense interest, however, was reached in the bidding for the Eighth Duchess of Geneva, which was sold to Mr. R. Pavin Davis, of Gloucestershire, England, for the unprecedented sum of $40,600. After this eleven cows of the Duchess family sold for $238,800, an average of over $21,700. Of these, six went to England at a cost of $147,100, and five remain here at a cost of $91,700.

After the Duchess family came the Oxfords, then the other families, the bulls being brought in after all the cows were sold. There were in all one hundred and eleven animals presented. The sum realized was $380,890. The Duchess herd was originally from England, imported in 1853, and kept in perfect purity in Duchess county, New York. For some years many young animals, both male and female, have been sold back to England.

PRODUCT OF WHEAT.

A very pertinent question, and one which merits careful consideration, has for some time past been presenting itself to the attention of farmers, viz: Why is it that our wheat production is not equal to that of twenty or thirty years ago? Notwithstanding the improvements which have been made in the implements and machinery which are now used on all well managed farms, and in spite of the labor saving appliances which are almost universally employed, statistics show that the average yield of wheat per acre is not equal to what it once was, and the large tracts of worn-out land which may be seen in all of our older States confirm the assertion. That there is a reason for this deterioration, and that there is a remedy for it, is evinced by the fact that a number of farmers still continue to raise large crops. But while these exceptions to the general rule really prove it to exist, it is easy to point out the cause of the diminished production, and to prove by their example that by properly appreciating this cause and taking means to prevent it, larger and more profitable yields may be obtained.

The reason of this deterioration in the yield of wheat is simply because land has been cropped without an adequate return by manuring, of those elements which plants have taken from it. All plants require nourishment, and fertile soils contain this nourishment in proper proportion, and hence they produce good crops. But a soil once depleted of plant food can never reward the farmer with profitable returns for his labor, until the valuable constituents which plants require be returned to it in the form of manure. No fact has been ever more clearly demonstrated than this, and it should be appreciated by farmers with a due sense of its importance. Judicious manuring is the remedy for worn-out soils, and is the only treatment which will ever restore them to fertility. In view of this fact it behooves farmers to consider the question thoughtfully. In the absence of a sufficient quantity of stable manure, science and art have combined to furnish a substitute which is within the reach of every faamer. Reliable fertilizers which possess a good record may be easily obtained. Some of these manures—such as Whanu's Raw Bone Super Phosphate, for example—have won for themselves a high reputation, and have produced large returns. On wheat and other staple crops this celebrated fertilizer has proved itself indispensable both for the quality as well as the quantity of yield. If all farmers would avail themselves of standard manures of this class the product of our important crops would soon increase, and worn-out lands would exist only in memory of the past.—*Easton (Md.) Star.*

To Prevent Lice on Sitting Hens.—If the nest of the sitting hens are lined with tansy, freshly gathered, they will not be infested with lice. Old nest boxes should be treated to a bath of scalding lye, before they are again used. Grease must not be used on the hens or the eggs will not hatch. Lime is not of any use. We have known a nest in a barrel of lime where the eggs lay on the lime, completely infested with lice.

Dr. Bull's Cough Syrup is an old reliable Family Medicine, used since years by thousands. It is known to be a Medicine of great power, entirely harmless, so that even the smallest child may take it without bad results.

Life has few Charms for the Dyspeptic, which is not to be wondered at when we take into account the amount of bodily and mental suffering that this distressing malady generates. The Peruvian Syrup (a protoxide of iron) has cured thousands who were suffering from this disease.

ANNOUNCEMENT
For 1873.

my18-tf. L. C. BAKER.

Matting
And OIL CLOTHS,
at low prices.
May 17. J. H. SIMPERS.

THE EUREKA
FANNING MILL.
THE GREATEST INVENTION OF THE NINETEENTH CENTURY!
Farmers Look to Your Interest.
The attention of Farmers and Mechanics is particularly directed to the combined economy, utility and practicability of the Eureka Mill, and to the many other advantages it possesses over every other Fanning Mill which has been introduced to the public.
It is the fruit of long and patient investigation by the inventor, who has made it his constant study for over twenty years. He has secured several patents for Mills, and has always been rewarded with the best of success. But not feeling satisfied with his former attainments, he determined to reach the climax, and he now believes that his new invention will warrant him in exclaiming in the joy of his heart, like the philosopher, Phythagoras—EUREKA!—signifying in the Grecian language, "I have found it." This has given the name to this new Mill.
In this Mill are all the former improvements to which have been added several more, adding still greater advantages than were at first anticipated, or even thought possible by the inventor himself. It embraces the three great essentials necessary in every invention:
It combines ECONOMY, UTILITY and PRACTICABILITY!
THE "EUREKA" MILL
is small and lighter, and is capable of doing more and better work in a given time than any other Mill ever invented.
IT IS THE ONLY MILL
that will successfully remove from wheat all such pests as Cockle, Garlic, Oats, Rye, &c.
Should an extra quality of grain for seed or gristing purposes be required, it can be so arranged as to catch in one box perfect grain, and in the other, grain fit for market or mill. Here is made a great saving usually lost sight of: for nearly one quarter of the grain cleaned in the common Mills is lost when sown, on account of shrunken kernels and inferior grain. The Eureka Mill saves all this, and gives seed every kernel of which will grow when put into the ground, and this saving will, in a short time, pay for the Mill.
HINES & BURCHINAL,
Chestertown, Maryland,
Owners of the Mill, are having them manufactured at the Sash Factory and Planing Mill of Noland & Co., Port Deposit, Md., which is a guarantee that they will be put up in the best manner. je17-tf.
