FOLEY'S HONEY AND TAR

for children: safe, sure. No opiates

MRS. A. M. HAGERMANN

ALL WOMEN SUFFER

from the same physical disturbances, and the nature of their duties, in many cases, quickly drift them into the horrors of all kinds of female complaints, organic troubles, ulceration, falling and displacements, or perhaps irregularity or suppression causing backache, nervousness, irritability, and sleeplessness.

Women everywhere should remember that the medicine that holds the record for the largest number of actual cures of female ills is

Lydia E. Pinkham's Vegetable Compound

made from simple native roots and herbs. For more than thirty years it has been helping women to be strong, regulating the functions perfectly and overcoming pain. It has also proved itself invaluable in preparing for child birth and the Change of Life.

Mrs. A. M. Hagermann, of Bay Shore, L. I., writes:—Dear Mrs. Pinkham:—"I suffered from a displacement, excessive and painful functions so that I had to lie down or sit still most of the time. Lydia E. Pinkham's Vegetable Compound has made me a well woman so that I am able to attend to my duties. I wish every suffering woman would try Lydia E. Pinkham's Vegetable Compound and see what relief it will give them."

Mrs. Pinkham's Standing Invitation to Women

Women suffering from any form of female illness are invited to write Mrs. Pinkham at Lynn, Mass. for advice She is the Mrs. Pinkham who has been advising sick women free of charge for more than twenty years, and before that she assisted her mother-in law Lydia E. Pinkham in advising. Therefore she is especially well qualified to guide sick women back to health.

JOHN BARTLEY, Chestertown, Md.

IT PAYS TO ADVERTISE IN THE "NEWS"

THE TONGUE OF A BIRD.

An Organ Which Varies Much in the Different Species.

Few people have given thought to the subject of birds' tongues. Many, even of the amateur bird students, know little of the literature on the subject and still less from personal observation.

Birds must use their bills as hands, and to some extent the tongues supplement such use. Thus nut and seed eating birds extract the kernel from the shell, which is cracked between the mandibles.

The full complement of bones of the tongue consists of eight. The shape varies considerably in different species, and the comparative size very much more, although there is a prevailing general resemblance. The size and development of the various bones control the shape and utility of the organ. Well developed front bones mean a thick, fleshy tongue, such as we find in members of the duck family, while small forward bones usually accompany a small tongue of less importance to the owner, sometimes little more than rudimentary, like that of the pelican.

Among such birds as have occasion to protrude the tongue well beyond the tip of the bill the hind bones are marvelously developed and greatly elongated, for these are the bones on which the tongue is hung.

The edges of the tongues of most birds are more or less fringed, this feature being most noticeable in thin tongues. Most birds have a greater or less number of papillae—small fleshy projections, spinelike in appearance and usually inclined backward—on the upper surface of the tongue. These are of service in working the food backward toward the throat.

Some of the sea birds have very simple tongues, which serve but little purpose. The tongues of the honey creepers have very fine and long feathering, while those of the woodpecker are long, slender and pointed, and the roots of some species curve clear around the back of the skull, up over the crown, and their tips rest at the base of the upper mandible. With the exception of the sapsuckers the tongues of woodpeckers are capable of great protrusion, and the tip is barbed. The sapsuckers, however, instead of having sharp, barbed tongues like those of other woodpeckers, have brushlike tongues as a result of the degeneration of the bristles on their surface into hairs standing out from the tongue rather than pointing backward.

Birds with long bills do not always have correspondingly long tongues. The kingfishers, with their disproportionately large bills, have short tongues. The outer edges of the very long tongues of humming birds are closely rolled up into two tubes lying side by side, by means of which the birds are enabled to suck the nectar from flowers.—New York Post.

Utility of Censors.

"When Maxim Gorky dined with me," said a literary New Yorker, "he talked about the Russian censorship.

"He said that in the course of the Russo-Japanese war he had occasion in an article to describe the headquarters of one of the grand dukes. He wrote of these headquarters, among other things:

"'And over the desk in his highness' tent is a large photograph of Marie la Jambe, the beautiful ballet dancer.'

"Before this article could appear the censor changed that sentence to, 'And over the desk in his highness' tent is a large map of the theater of war.'"—Detroit News

The Ostrich.

In its habits, methods of life and prejudices the ostrich is one of the most curious creatures of the animal kingdom. It cannot be tamed, though it is easily trained to harness. When taught to race it seems to delight in a brush on the track or road with a horse. The gait of the ostrich is a lumbering sort of jog trot, which becomes delightfully easy when the bird is traveling fast. Unhampered with a rider and traveling with the wind this muscular creature can outstrip any horse.

Machinery and Labor.

A generation or two ago men and women worked very long hours, and children had to work, too, in order to produce enough to support the workingman's family. The growth of capital and the employment of machinery have added so much to the efficiency of labor that long hours for adults are no longer necessary, and the industrial employment of children under fourteen can be entirely dispensed with.—American Review of Reviews.

A Fatal Error.

Borrowes—Nellie, hand me my umbrella, will you? It has commenced to rain. Mrs. B.—I lent your umbrella to Mr. Sweetfern last night. Borrowes—What in thunder did you do that for? Didn't you know it was his?—Spare Moments.

Did Her Worst.

Hicks—She threatened all sorts of things, and finally he got desperate and exclaimed, "Do your worst!" Wicks—And what did she do? Hicks—Very coolly she began to play the piano. Wicks—I see. She took him at his word.

Quite a Difference.

"Say, paw, what does it mean to live to a ripe old age?"

"When a rich man gets to be eighty, my son, he is at a ripe old age. A poor man is merely old and decrepit."—Milwaukee Sentinel.

The word idea formerly meant a completed performance, whether mental or physical.
