Cleveland, O.

## "BLOOD IS THICKER THAN WATER"

Without good red blood a man has a weak heart and poor nerves. Thinness of the blood, or anaemia, is common in young folks as well as old. Especially is it the case with those who work in illy ventilated factories—or those who are shut up indoors in winter time with a coal stove burning up the oxygen or emitting carbonic (oxide) gas. This blood, or blood which lacks the red blood corpuscles, in anaemic people may have been caused by lack of good fresh air breathed into lungs, or by poor digestion or dyspepsia. Sometimes people suffer intense pain over the heart which is not heart disease at all, but caused by indigestion. Whatever the cause, there's just one remedy that you can turn to—knowing that it has given satisfaction for over 40 years.

DR. PIERCE'S

## GOLDEN MEDICAL DISCOVERY

is a blood cleanser and alterative that starts the liver and stomach into vigorous action. It thus assists the body to manufacture rich red blood which feeds the heart—nerves—brain and organs of the body. The organs work smoothly like machinery running in oil. You feel clean, strong and strenuous instead of tired, weak and faint. Nowadays you can obtain Dr. Pierce's Golden Medical Discovery Tablets, as well as the liquid form from all medicine dealers, or tablets by mail, prepaid in $1 or 50c size. Adress R. V. Pierce, M. D., Buffalo, N. Y.

DR. PIERCE'S GREAT 1008 PAGE ILLUSTRATED COMMON SENSE MEDICAL ADVISER WILL BE SENT FREE, CLOTH BOUND FOR 31 ONE-CENT STAMPS.

## Light Your Kitchen with a Rayo Bracket Lamp

Sometimes in the kitchen or elsewhere you need a lamp held high, where it will light the whole room, and be out of the reach of children.

The Rayo Bracket Lamp is made for exactly this purpose. It is one of the famous Rayo Family—the best kerosene lamps made. A clear, white light, steady, diffused. A strong, substantial bracket, easily affixed to the wall. The lamp is inexpensive. Economical. Lighted without removing chimney or shade. Rayo Lamps are made in various styles and for all purposes. *At Dealers Everywhere*

## How To Keep The Boy And Girl On The Farm.

By Conlyn E. Noland.

Authorities all over the country are confronted with a new and growing problem upon the solution of which depends the social and economic wellfare of this illustrious nation. The problem in question is: How to keep the young men and young women on the farm.

Our legislators and economists have recently sounded a note of warning that, unless some measures be taken to stop the yearly increase flow of population from country into city, our nation will soon be embarassed by the question of deficiency in food production and, that it devolves itself upon us, as good thinking citizens of the commonwealth, to ascertain, if possible, the reason for these conditions and to offer, as best we may, suggestions for their proper correction.

It has long been the complaint of the country boy and girl that rural life offers few of the social, educational, or financial advantages as compared with the exceptional opportunities of the city and we can attribute to this cause, more than any other, the basis of their discontent.

We shall not attempt to deny or disprove the truth of these assertions. There is an undeniable glitter and fascination in the contemplation of city life whether or not purchased at a price far in excess of the benefits accrued, and there are instances of wonderful achievements and fabulous success attained through the tireless energy and exceptional individuality of former country boys, though countless others have fallen victims to the relentless clutches of endless toil and avaricious ambition.

What we desire to do is to point out in a very general outline a few ways by which we can confer upon the boy and girl a fuller realization of the myriad resources of the soil and give them a nobler conception of its golden opportunities.

By thus causing them to view from a different angle the commanding position attained by the agriculturist in this new era of scientific advancement they cannot but pay heed to its striking advantages in selecting a field for their life work. To bring this about we would suggest as the most important method of procedure: The installation of a complete and systematic course of nature study in our public schools. It is needless to say that the success of this movement would depend upon the subject being presented in a pleasing and interesting manner as otherwise its effect would be highly deleterious in the attempted creation of new ideals. First bring to the child's attention the continual occurance of natural phenomena about him. By the use of text-books, supplemented by field work, begin an elementary course in botany, zoology, and geology, gradually branching out into more general and scientific principles when his mind is able to assimulate them. Encourage him to explore and experiment on his own account and by thus gathering the secrets from her wonderful storehouse of knowledge, we will open his eyes to the beauty and complexity of nature and things, which before seemed to him commonplace and insignificent will assume a new and interesting aspect. By the time high school is reached he will be prepared to intelligently begin an elementry course in agriculture, giving him further insight into the subject by combining practice with study. His interest may be further held by the introduction of prizes for the best grown products at the smallest cost of production or other methods suggested to the instructor and occasional lectures by experts from our agricultural colleges and practical farmers of experience. Suppliment these studies with a well-equipped library and encourage the filing of agricultural journals at home by which means a ready and helpful reference may be easily secured. Parents should co operate by giving the youth an interest in the live stock, a plot of ground to till for his own profit, and discuss with him the problems and tillage of the farm, acquainting him with conditions as they actually exist, and encourage him to investigate and suggest new ideas. The attendance of live stock and horticultural shows is another source of education and inspiration. The employment of land-scape gardening around the farm, installation of modern conveniences in the house and outbuildings, employment of modern machinery in growing and harvesting of crops, exert a lending effect in the theme of his education.

We have now given our student a limited education in the science and practice of agriculture. We have given him a conception of the wide field that it embraces, the dignity of its calling, and the inexhaustible wealth and opportunity it offers. We have transformed him from one who would otherwise have regarded it in a prejudiced or disinterested manner into one thoroughly conversant with its possibilities and able to compare it intelligently and favorably with all other callings. He is now the graduate of a high-school. The time has come for him to specialize in that profession in which he will attempt to realize the dreams of lofty ambition and reap the reward of hard-earned success. We have done our part. What will his answer be?

### WILL OF WILLIAM P. NORRIS.

In the News last week was published the will of Mr. Penn Norris but a a mistake was made in referring to the farm left Mrs. Norris. This farm lately came in possession of Mr. Norris through the death of Mrs. Beck. The Urie farm was not mentioned in the will so that the will in full is as follows:

He gave his gold watch and chain to grandson, Norris Wilson Matthews.

He left $200 to his son, John C. Norris, to be held in trust for his two grandchildren, Norris Wilson Matthews and John Cecil Matthews.

He left to his wife, Annie M. Norris, his farm in the Second district of Kent county.

He gave to his son, John C. Norris, his interest in the firm of W. P. Norris & Son, including a stall in Lexington Market, Balto.

To his daughter, Lydia N. Matthews, wife of Aquilla J. Matthews, he gave all the money he had deposited in the Howard Loan and Savings Association and the Federal Hill Perpetual Building and Savings Association.

The residue of the estate is left to his wife, Annie M. Norris. He appointed his son, John C. Norris, executor to the will.

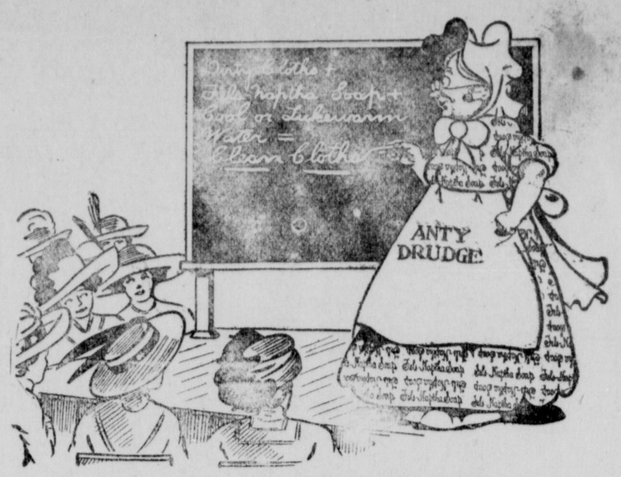
Children Cry
FOR FLETCHER'S
CASTORIA



Anty Drudge as a Teacher.

*Anty Drudge*—"There is a sum that is as true as 2+2=4."

*Mrs. Savework*—"But you have forgotten to subtract several things, professor."

*Anty Drudge*—"I know, my dear. When you use Fels-Naptha soap you can subtract hot fires, hard rubbing, yellow-white clothes, steam-soaked homes on Mondays, sickness resulting from hot water washing and many other disagreeable things."

Your clothes—your health—your strength—so much depends upon the soap you use, that you can't be too careful in choosing.

If you do the wash in the old-fashioned way—with soaps that require boiling water and much hard rubbing, you can't blame the clothes for wearing out so quickly.

And it's natural that the exertion should tax your strength and that the steaming soapy suds should "stuff up" your head and ruin your skin.

But Fels-Naptha requires no boiling water, no hard rubbing.

And it contains nothing harmful to the finest fabrics.

It is the one soap that will make your clothes look best and wear longest, and that will get you through a whole day's wash before noon.

Fels-Naptha is a wonder-worker at housecleaning—makes the floors white and brightens up the paints.

Follow the directions on the red and green wrapper. Use any time of year.
