Some of the Best Crops of Wheat

GROWN IN THE STATE WERE FROM

WILBUR W. HUBBARD'S

STANDARD BONE FERTILIZERS

Last year we made for Dr Isaac Barber, the ex-Congressman, and Mr. G. M. Wingard, the machinist, of Easton, a lot of Fertilizer that ontained 1400 pounds of Dissolved Animal Bone, 400 pounds of Bone Tanking, 200 pounds of Muriate of Potash; total 2000 pounds. Dr. Barber we have not have not heard from, but the following is what Mr. Wingard has to say:

EASTON, MD., Aug. 1, 1906.

WILBUR W. HUBBARD, Esq, Chestertown, Md.—Dear Sir: That goods you made for me last fall certainly gave satisfaction. In the spring our wheat looked like other people's. We feared that we would only have half a crop, although as I told you when I got you to make this goods for us I believed in a good goods and use less per acre, and only used 200 pounds on 100 acres, and threshed a few days ago from 66 acres 27 bushels per acre; from 40 acres 29½ bushels; from four acres 40 bushels per acre; and it was nice wheat. And I therefore believe it paid me better to use 10 tons of that goods than it would 20 tons of a cheap fertilizer, and my clover is splendid and about a foot high.

Respectfully,
G. M. WINGARD,
Machinist, Easton, Md.

Mr. Vincent Lee says: I used Wilbur Hubbard's fertilizer last year alongside a goods costing $3 50 more per ton and marked the place, and when the wheat was examined by people who came to see it Hubbard's was generally acknowledged to be as good or better.

Mr. Wm. Clark, on H. H. Barroll's farm, near St Paul's Church, says that Hubbard's fertilizer certainly did splendidly for him this time, and that part of it threshed out 24 bushels per acre.

Mr. E. D. Reed, who owns a threshing rig, under date of July 29th, certifies that Wilbur Hubbard's fertilizers for the last three years have yielded 3 to 5 bushe's more per acre than others used in competition and that the farmers are appreciating their value.

Mr. H. H. Klinefelter says: I have used 90 to 100 tons of Hubbard's goods per year for ten years, and I expect to continue to use them.

Mr. John T. Jones, of Barclay, Md., says: I sold and used 40 tons of Hubbard's in 1903, 60 tons in 1904, 165 tons in 1905, and will need over 200 tons to supply my trade this fall.

Mr. Cad. L. Phillips, of Laurel, Del., says: I have sold and used Hubbard's fertilizers for 20 consecutive years, and this year it will take me 150 to 200 tons.

Mr. John H. Evans, of Queen Anne's, uses 75 to 100 tons of our goods per annum, and says this year by actual test Hubbard's was the best, and expects to use it again.

Mr. J. B. Hossinger says Hubbard's fertilizers give him satisfaction, and that is why he places his order for 28 tons this year.

OYSTER GROWTH ILLUSTRATED.

Yeast Bottle From Chester River Tells Its Own Story.

Mr. L. M. Kelley, an oyster planter in Chester river sends a specimen of young oyster growth attached to a yeast powder bottle.

The bottle is full of Chester river water, and the young growth of oysters has corked it up so effectually that the water cannot get out. In fact, the oysters have hermetically sealed the bottle as efficiently as if the seal of Solomon had been put upon it by the magic touch of one of the genii of fable.

Clustered about the neck of the bottle, and extending down into its mouth, half a dozen or more of well-developed oysters made their lodgment and their home. They are there as an object lesson in oyster planting. Give the spat a chance to attach itself to something hard, a brickbat, a stone, an old boot, the vulcanite rubber of a set of false teeth, the shell of a defunct oyster, anything smooth and hard and the teeming waters of the Chesapeake and its tributaries will reproduce millions of oysters of commercial value.

To plant in the rivers of Maryland at the mouths, or in the Chesapeake bay, means simply to place in the rich mud of the great basin something upon which the myriad embryotic oysters may find lodgment, and they begin to build up their colonies.

A great deal is heard now about natural rocks, the need of surveying them, of locating them, of preserving them exclusively for common usage; but the industrious oyster will build upon an hard substance in our waters, and in time multiply into millions.

The simple regulation wanted is that the citizens of this State shall be permitted to put in the way of the willing oysters the proper means of building up themselves, of finding lodgment, of preventing themselves from being smothered in the rich oyster mud which the streams of many rivers pour into the basin of the bay.

There are eight large streams, mostly navigable water on each side of the bay—sixteen in all, and not counting smaller estuaries. They bring the food of the oyster. The natural rocks to which the embryotic shellfish cling are rocks which nature has placed here and there. About these rocks oysters have clustered for centuries, and for centuries have been taken away by man and consumed as food.

In its embryotic stage the oyster is a free swimming ciliated fish. That is, the embryo is provided with hairs which it uses as oars to propel itself toward some hard substance, which, when reached, becomes its abiding home, and from which an indefinite number of oysters may be produced.

It has been stated, no doubt with accuracy, that if left alone, the oysters would in a very short while, choke up the Chesapeake bay. There are many localities on the Atlantic coast where the oysters, multiplying one on the other, create bars which at low tide rise out of the water.

The natural rocks of Maryland 25 and 30 years ago were so fruitful of oysters that it was considered a benefit to them to employ the dredge to scatter them as well as to scoop them up for the market. But experience demonstrated that scattering them simply smothered them in the mud, the oyster mud, the richest food the oyster can have, but fatal to it when it is buried in it. It was too much of a good thing.

In its natural makeup the oyster, beginning as a little free swimmer, as Professor Brooks has demonstrated in his biological investigations, is desirous of but one thing, and that is to find lodgment. This secured, it goes on to build up its upper and lower shells, to grow in size, to fatten and propagate; in the natural state, such rocks as were at hand, so to speak, have been appropriated; they have been populated by the oyster and raked off by man until they are denuded, and the source of recuperation well nigh killed off.

But it is not too late to recuperate. The oyster is a willing creature. All it wants is a firm foothold, if such a term is admissible, to make permanent lodgment, and then go on to fill its natural instinct to increase and multiply in accordance with a motto of the State which has gone into desuetude along with oyster planting.

Let the oyster alone on its natural rocks.

Encourage planting, which is providing artificial rocks or foundations on which the oyster may build

Protect the planter in his industry.

These are four primary considerations to revive the former industry of the oyster and of men engaged in oystering whether they be takers of oysters, cultivators or packers of oysters.

To The Trustees of

It is our earnest wish to donate a quantity of the L. & M. Paint to your church and every church whenever it is to be painted.

10,000 churches painted with L. & M. 4 gallons L. & M. mixed with 3 gallons Linseed Oil will paint a moderate sized house.

Actual cost of L. & M. about $1.20 per gallon.

L. & M, Zinc hardens L. & M. White Lead and makes the paint wear like iron.

Barrows & Peck, Montpelier, Vt., Writes, "School house No 2 painted with L. & M.; two coats. Used only five gallons L. & M. and nine gallons Oil. Cost of paint, 97½ cents a gallon."

Sold by Smith & Graham, Chestertown, Md; F. H. Harper & Son, Still Pond; J. W. Ivens, Worton.

Dr. Pierce's Favorite Prescription

Is a powerful, invigorating tonic, imparting health and strength in particular to the organs distinctly feminine. The local, womanly health is so intimately related to the general health that when diseases of the delicate womanly organs are cured the whole body gains in health and strength. For weak and sickly women who are "worn-out," "run-down" or debilitated, especially for women who work in store, office or schoolroom, who sit at the typewriter or sewing machine, or bear heavy household burdens, and for nursing mothers, Dr. Pierce's Favorite Prescription has proven a priceless benefit because of its health-restoring and strength-giving powers.

As a soothing and strengthening nervine, "Favorite Prescription" is unequaled and is invaluable in allaying and subduing nervous excitability, irritability, nervous exhaustion, nervous prostration, neuralgia, hysteria, spasms, chorea, or St. Vitus's dance, and other distressing nervous symptoms commonly attendant upon functional and organic disease of the womanly organs. It induces refreshing sleep and relieves mental anxiety and despondency.

Cures obstinate cases. "Favorite Prescription" is a positive cure for the most complicated and obstinate cases of "female weakness," painful periods, irregularities, prolapsus or falling of the pelvic organs, weak back, bearing-down sensations, chronic congestion, inflammation and ulceration.

Dr. Pierce's medicines are made from harmless but efficient medical roots found growing in our American forests. The Indians knew of the marvelous curative value of some of these roots and imparted that knowledge to some of the friendlier whites, and gradually some of the more progressive physicians came to test and use them, and ever since they have grown in favor by reason of their superior curative virtues and their safe and harmless qualities.

Your druggists sell the "FAVORITE PRESCRIPTION" and also that famous alterative, blood purifier and stomach tonic, the "GOLDEN MEDICAL DISCOVERY." Write to Dr. Pierce about your case. He is an experienced physician and will treat your case as confidential and without charge for correspondence. Address him at the Invalids' Hotel and Surgical Institute, Buffalo, N. Y., of which he is chief consulting physician.

MARION DEK. SMITH, ATTORNEY.

Order of Publication.

John P. Ahern and Henry Tonkin, trading as Ahern & Tonkin,
versus
Henry C. Stevens, Peter Stevens, Benjamin F. Stevens, Annie Magee and Richard Magee, her husband; Mary E. Pearson, Alphonse H. Pearson, her husband; James W. Stevens, Frank W. Stevens, Elizabeth F. Stevens, Georgie W. Stevens, Michael Stevens, Ida Stevens, Benjamin W. Duling, James H. Poor and Walter Manning.

In the Circuit Court for Kent County, in Equity.

THE OBJECT of this suit is to procure a decree of this Honorable Court for the sale of a portion of the real estate of John Stevens, deceased, and to divide the proceeds among certain holders of mechanic's liens thereon.

The Bill states that the complainants contracted with the said John Stevens to furnish the materials to be used in the erection of a dwelling house, to be built by said John Stevens on a lot of land of which said Stevens was the owner, or reported owner, situate on Crane street, in the town of Millington, Kent county aforesaid.

That the complainants did furnish the materials used in the erection of said building. That this claim therefor being overdue, they demanded payment for the material furnished, and same was not paid That you orators filed in the Clerk's Office of the Circuit Court their claim as a lien against said building and the ground upon which same is erected.

That the said John Stevens departed this life in the month of April, 1906, leaving the said Ida Stevens, his widow, and Henry C. Stevens, Peter Stevens, Annie Magee, formerly Annie Stevens, who had intermarried with a certain Richard Magee, Mary E. Pearson, formerly Mary E. Stevens, who intermarried with a certain Alphonso H. Pearsons, John W. Stevens, Frank W. Stevens, Elizabeth F. Stevens, Georgie W. Stevens, his only children and heirs at law.

That said Benjamin W. Duling and James W. Poor duly filed their respective claims for work done in and about the erection of said dwelling house. That said John Stevens purchased the said lot of land from the said Walter Manning, and the complainants are advised that a part of said purchase money remains unpaid.

That the said John W. Stevens, Frank W. Stevens, Elizabeth F. Stevens, Georgie W. Stevens and Michael Stevens are infants, under the age of twenty-one years. That the said Annie Magee and Richard Magee, her husband, reside in the state of Pennsylvania; Mary E. Pearson and Alphonso H Pearson, her husband, reside in the State of Delaware; and all are non-residents of the State of Maryland; and the bill states that it will be necessary that the said house and lot of land be sold in order that the lienors may have their claims paid out of the proceeds of sale.

It is therefore this 23d day of August, 1906, ordered by the Circuit Court for Kent county, in Equity, that the Phintiffs by causing a copy of this order to be inserted in some newspaper published in Kent county, Maryland, once in each of four successive weeks before the 26th day of September next, giving notice to Annie Magee and Richard Magee, her husband, of the State of Pennsylvania, and Mary E. Pearson and Alphonso H. Pearson, her husband, of the State of Delaware, and non residents of the State of Maryland, of the object and substance of this bill, and warning them to appear in this court, in person or by solicitor, on or before the 12th day of October next, to show cause if any they have, why a decree ought not to pass as prayed.

JAMES T. DIXON, Clerk.
