Kent News.

SATURDAY.....MARCH 12, 1881.

HOE OUT YOUR OWN ROW.

One day a lazy farmer boy
Was hoeing out the corn,
And moodily had listened long
To hear the dinner horn.
The welcome blast was heard at last,
And down he dropped his hoe;
But the good man shouted in his ear,
"My boy, hoe out your row."

Although a "Hard one" was the row,
To use a ploughman's phrase,
And the lad, as sailors have it,
Beginning well to "haze."
"I can," he said, and manfully
He seized again his hoe
And the good man smiled to see
The boy "hoe out his row."

The lad the text remembered long,
And proved the moral well,
That perseverance to the end
At last will nobly tell.
Take courage, man! resolve you can,
And strike a vigorous blow;
In life's great field of varied toil,
Always "hoe out your row."

Fish for Farmers.

An extremely interesting subject is brought to the attention of farmers by that veteran journalist, Mr. H. W. Grady, in an article written for the Atlanta Constitution. The article narrates the experiences of Mr. Pappe, a German, who in 1877 introduced the carp of his native country into the United States. He purchased eighty-three-fish of a miller in Reinfield, Germany, who was known for the excellence of his carp, but lost all but five of them while crossing the Atlantic, as the result of the failure of his supply of ice. When he arrived at the ponds he had constructed from marsh land on his farm near Sonora, Cal., the five fish had cost him $500 each. In nine months, however, they had grown to be sixteen inches long and had raised a family of 3,000 members. The carp spawns two or three times in April or May, instead of continuously as other fish do. One pair will produce about 20,000 young each season, and as the rate of growth is about an inch in length and a half pound in weight a month, the progeny of an industrious pair should aggregate about 100,000 pounds of food at the end of a year.

What renders such statements peculiarly interesting to the farmer, is that almost any farm may have a carp pond, since, although a delicious fish, the carp will live in any artificial pond, and Mr. Pappe declared it would eat anything a hog would eat. He fed his curd from his dairy, but they like barley, peas, wheat, or anything of the kind. Mr. Grady thinks there are fully 2,000 fish ponds in California. He humorously says: "I think the establishment of fifty carp ponds will do Georgia more good than if we had elected Hancock. I had rather see a dozen established than to see Georgia gain a Congressman in the apportionment, and that is why I have written more about fish than politics."

He speaks of the bad effect to the Southern people of a meat diet chiefly of bacon and other salt meat. A substitute of fish for a great part of this bacon would not only add to the comfort but to the vigor of the people of the South. And salt pork on the farms of the North is almost as much used as bacon in the South. The farmers are generally too far from market to obtain a regular supply of fresh meat in the summer, and so they depend for flesh food upon salt pork, an article which is not fit for the table. Although the marshy character of Southern lands will make the construction of carp ponds less difficult there than at the North, in both sections the farmers should see what can be done to provide their tables with fish upon the plan Mr. Grady suggests. If the farmers would abandon salt pork for more wholesome meat, the reform would contribute much to the national strength.

Wheat for Chickens.

Every farmer has noticed that about the time of wheat harvest, if the fowls are allowed the run of the fields and barnyard, there is a material increase in the egg supply. I think the second fact is the natural result of the first. I have fed corn, oats, barley, buckwheat, flax and sunflower seeds, and have found nothing equal to whole wheat as food for fowls. For young chicks it seems especially adapted. After two or three days of feeding of soft food the young chickens will pick up the wheat quite greedily, and will thrive on it as on nothing else. Growing chickens have a large demand for lime, and especially bone material, and this is more nearly supplied in the whole wheat than any other grain. If wheat were two dollars per bushel it would still be the cheapest feed for young chicks. Farmers can, however, economize by feeding wheat screenings and damaged wheat, though unsalable, is nearly as good for chicken feed. In feeding screenings, if there are many weed seeds, due allowance should be made, as they are not so nutritious as the wheat. Some kinds of weed seeds are hurtful to chickens; but these they will reject if fed whole. Grinding weed seeds is of little benefit except to get clear of them, and this might be better done by fire, as they are of so little worth.

Last winter we had several bushels of wheat so badly damaged by rain in harvest that it was condemned as worthless except for stock feed. It was given quite liberally to the hens, alternating with corn, and though the winter was very unfavorable for egg production, the hens commenced laying early and have produced much larger quantity than ever before. I attribute this to the damaged wheat, and shall see that wheat in some shape is supplied to the fowls hereafter.

Boiling Water in a Sheet of Paper.

Nature is publishing a series of articles on "Physics without Apparatus." In the latest number are given experiments for boiling water and melting lead on a piece of paper and fold it up, as school boys do, into a square box without a lid. Hang this up to a walking stick by four threads, and support the stick upon books or other convenient props. Then a lamp or taper must be placed under this dainty cauldron. In a few minutes the water will boil. The only fear is lest the threads should catch fire and let the water spill into the lamp and over the table. The flame must therefore not be too large. The paper does not burn, because it is wet; and even if it resisted the wet it still would not burn through, because the heat imparted to it on one side by the flame would be very rapidly conducted away by the water on the other.

Another experience of a similar nature, but even more striking, is as follows: Twist up the edges of a common playing card or other bit of cardboard, so as to fashion it into a light tray. On this tray lay a layer of small shots or bits of lead, and heat it over the flame of a lamp. The lead will melt, but the card will not burn. It may be charred a little round the edges, but immediately below the lead it will not be burned, for here again the lead conducts off the heat on one side as fast as it is supplied on the other.

Forward and Backward.

The clever "Puzzle Editor" of London Truth exercises immense ingenuity in providing entertainment for his readers. He offered a prize for "sentences making sense whether read backwards or forwards." Here are several sent in:

Dies slowly fading day; winds mournful sigh:
Bright stars are waking;
Flies owlet, hooting, holding revel high,
Nightly silences holding.

Solomon had vast treasures—silver and gold—things precious. Happy and rich and wise was he. Faithfully served he God.

She sits lamenting sadly, often, too much alone.

Dear Harry— Devotedly yours remain I. Have you forgotten 20-poundcheque? Reply immediately please, and hand to yours—Grace Darling.

Man is noble and generous often but sometimes vain and cowardly.

Carefully boiled eggs are good and palatable.

Love is heaven and heaven is love, youth says. All beware! says age. Trying is poverty and fleeting is love.

Badly governed and fearfully troubled now is Ireland.

Adieu, darling! Time flies fast, sails are set, boats are ready. Farewell!

Matter and mind are mysteries. Never mind. What is matter? Matter is—never mind. What is mind? Mind is—never matter.

Honesty and truth are good and admirable qualities, as sympathy and love are enduring traits.

Politics and religion avoid arguing in. Here is good and sound advice.

Scandalous society and life make gossips frantic.

The Square Man.

The square man measures the same each way, and hain't got no wamny edges nor shakey lumber in him. He is free from knots and sap, and won't warp. He is klear stuff, and I don't care what you work him into he won't swell and he won't shrink. He is amung men what good-dried boards are amung carpenters, he won't season-krack. It don't make any difference which side ov him yu cum up to, he is the same bigness each way, and the only way tew get at him, enny how, iz tew face him. He knows he is square, and never spends any time trying tew prove it. The square man is one of the best shaped men the world has ever produced. He is one ov them kind ov chuncks that yu kant alter tew fit a spot, but yu must alter the spot tu fit him.—*Quincey (Ill.) Modern Argo.*

It is an erroneous notion which some people hold, that cold winters are useful to the farmer, by freezing out insects, caterpillars, and larvæ. Of course, if there is any good to be got out of such a winter as the past, for instance, we have no objection; but let us have no false pretenses. The fact is, catapillars and larvæ may be frozen so as to snap like glass, and yet the blamed things "ain't dead yet." There's no use in lazy farmers depending on the cold weather to rid them of their enemies.

A French gentleman, who supposed he had mastered the English language, was sadly puzzled one day when a friend looked at him and said:
"How do you do?"
"Do yot?"
"I mean how do you find yourself?
"Sair, I never loses myself."
"But, how do you feel?"
"Smooth—you just feel me."

An honest Hibernian, in recommending a cow, said she would give milk year after year without having calves. "Because," said he, "it runs in the breed; for she came of a cow that never had a calf."

All kinds of burns, including scalds and sunburns, are almost immediately relieved by an application of a solution of soda to the burnt surface.

More hearts pine away in secret anguish, for want of kindness from those who should be their comforters, than from any other calamity in life.

We appreciate no pleasures unless we are occasionally deprived of them. Restraint is the golden rule of enjoyment.

A man cannot do good or evil to others without doing good or evil to himself.

NEW YEAR GOODS.

C. M. LUCAS,
Watchmaker and Jeweler,

The Improved
WATER
Elevator
AND
Purifier!
AS A WATER ELEVATOR it has these merits: 1st—It is the Simplest Structure for raising water, on the American market. 2, it is easily adjusted to any well or cistern. 3, it is very durable. 4, it works easily. 5. it will NEVER freeze. 6, it is always ready for use and always at its best. 7, it has none of the objections common to pumps. 8, it will make warm water cold.
All who examine this invention admit the above claims, but ask
How Does it Purify Water?
As the inverted cups pass around the Terra Cotta wheel suspended in the chain at the bottom of the Well or Cistern, they are constantly discharging air through the water from the bottom to the top.
This elevator will destroy *Wiggles, Water Bugs and Water Lice*, will make *foul or stagnant water pure*, and will remove all *color, bad taste* and *smell*. In short, *it will make bad water good, and good water better.*
The undersigned have secured the exclusive right to sell this really valuable Pump in Kent county and they earnestly ask for it a candid and fair examination, confident of its intrinsic merit. One can be seen on exhibition in Chestertown at any time. For circulars address
ROLPH & DeFORD,
jy24-tf. *Sole Agents for Kent County*

A Great Discovery!

We have just succeeded in making a combination which will *effectually cure*
SCRATCHES
IN HORSES,
IN FROM TWO TO THREE DAYS.
This preparation has not been put upon the market hastily, but has been thoroughly tested by our leading horsemen.
By permission we refer to
Messrs. JOHN W. LOUD,
SAM'L B. ARMSTRONG,
C. C. B. RASIN,
JAMES A. RUSSELL.
A fair trial is solicited. Price per bottle 50 cents.
fe21-tf. COLIN F. STAM, DRUGGIST.

THE U. B.
Mutual Aid Society
OF PENNSYLVANIA,
Presents the following plan for consideration: The payment of $8 on application, $5 annually for four years, and thereafter $2 annually during life, with prorata mortality assessments at the death of each member of his class, which

FOR DIVISION A IS AS FOLLOWS:

Age.	Assessment.	Age.	Assessment.	Age.	Assessment.	Age.	Assessment.
15	60	28	73	41	92	54	1 70
16	61	29	74	42	94	55	1 80
17	62	30	75	43	96	56	1 92
18	63	31	77	44	98	57	2 04
19	64	32	79	45	1 00	58	2 16
20	65	33	81	46	1 06	59	2 28
21	66	34	83	47	1 12	60	2 40
22	67	35	85	48	1 18	61	2 45
23	68	36	86	49	1 24	62	2 50
24	69	37	87	50	1 30	63	2 55
25	70	38	88	51	1 40	64	2 60
26	71	39	89	52	1 50	65	2 65
27	72	40	90	53	1 60		

This secures One Thousand Dollars at death. To secure two thousand the payments are double the above; three thousand three times, &c.
WM. H. DUDLEY, Agent,
apr17. *Lynch's Station, Kent co.*
