BOOT AND SHOE ESTABLISHMENT,
No. 150 Pratt street, Baltimore.

BOOTS AND SHOES.

In soliciting the patronage of the inhabitants of Baltimore, in the above business, asks to invite their attention to a few plain facts in connection with the art of Boot and Shoe making, and particularly to the fitting of the same. Being fully convinced that the pain and inconvenience under which so many persons suffer arises from unequal pressure on certain portions of the feet, which causes corns, bunnions, and other deformations of the foot, may be removed with due attention to the formation of the boot or shoe.

S. P. RHODES
guarantees
A GOOD AND EASY FIT.

Each article being made under my own superintendence. It is an indisputable fact that corns and bunnions are caused by unequal pressure on the foot; it the boot or shoe, therefore, be not formed according to the position of the foot when the weight of the body presses upon it, there must of necessity be an unequal pressure which, with the friction occasioned by walking, irritates and produces inflammations. Hence, it is from the boots or shoes not fitting the foot properly a defect solely attributable to the manufacturer, who may not possess sufficient knowledge of his business, that has caused so many to suffer from the ignorance of the few, both in health and wealth; in the former instance by the pain occasioned by corns, &c., and in the latter by compelling persons to cut their boots and shoes to give ease, or sacrifice such articles before they are half worn out, and inflicting grievous wrong upon the public at large, in regard to that essential point—the properly fitting of the foot.

Boot making ought to be regarded as an important science, although it is generally considered as a very simple business. This arises from the great number of boot and shoe sellers, not manufacturers, many of whom are not in the slightest degree acquainted with the making of either; and many of the articles sold by such persons are frequently made from the one last, as if all persons's feet were precisely the same shape, a thing as utterly impossible as it is to see two persons with precisely the same features. The fact, is they are made for sale, and the comfort of the purchaser is not in the slightest degree attended to, while the material is frequently the very worst, the workmanship inferior, cheapness being the only point considered; but it often turns out the dearest. S. P. Rhodes will not adopt that course, and assures those who favor him with their custom that the article shall be manufactured of the best material, and best workmanship, and the lowest remunerative prices.

I have now on hand a fine lot of

GENT'S BOOTS, SHOES AND GAITERS.

I take the draft of your foot, so the boot or shoe is shaped to it. Corns cut, and all other imperfections of the feet attended to, without causing the slightest pain.—Persons waited on at their own houses.

Remember the old stand,

S. P. RHODES
successor to the late HENRY PECK,
who successfully carried on the above business for over fifty years. All measures, books and lasts kept, and I hope the old customers and the public in general will give me a trial.

THE
SCIENTIFIC AMERICAN
FOR 1866!

VOLUME X.—NEW SERIES.

ONE NEW Volume of this popular Journal commenced on the first of January. It is published WEEKLY, and every number contains sixteen pages of useful information, and from five to ten original engravings of new inventions and discoveries, all of which are prepared expressly for its columns.

TO THE MECHANIC AND MANUFACTURER.

No person engaged in any of the mechanical or manufacturing pursuits should think of "doing without" the SCIENTIFIC AMERICAN. It costs but six cents per week; every number contains from six to ten engravings of new machines and inventions, which can not be found in any other publication.

TO THE INVENTOR.

The "Scientific American" is indispensable to every inventor, as it not only contains illustrated descriptions of nearly all the best inventions as they come out, but each number contains an Official list of the claims of all the Patents issued from the United States Patent Office during the week previous; thus giving a correct history of the progress of invention from week to week. We also receive, every week, the leading scientific journals of Great Britain, France, and Germany; thus placing in our possession all that is transpiring in mechanical science and art in these old countries. We shall continue to transfer to our columns copious extracts from these journals of whatever we may deem of interest to our readers.

A pamphlet of instruction as to the best mode of obtaining Letters Patent on new inventions, is furnished free on application.

Messrs. MUNN & CO. have acted as Patent Solicitors for more than SEVENTEEN years, in connection with the publication of the Scientific American, and they refer to 20,000 patentees for whom they have done business.

No charge is made for examining sketches and models of new inventions and for advising inventors as to their patentability.

Chemists, Architects, Millwrights and Farmers.

The Scientific American will be found a most useful journal to them. All the new discoveries in the science or chemistry, are given in its columns, and the interests of the architect and carpenter are not overlooked, all the new inventions and discoveries appertaining to these pursuits being published from week to week. Useful and practical information pertaining to the interests of Millwrights and mill owners will be found in the Scientific American, which information they can not possibly obtain from any other source. Subjects in which farmers are interested will be found discussed in the Scientific American; most of the improvements in agricultural implements being illustrated in its columns.
