CHESTERTOWN'S BEST STORE.

Special Notice to Ladies

Our large purchase of Ladies' Suits for this season are now completed and the final lots have arrived, and are ready for selling. These Suits are just what you are looking for. Our strong argument is that you get them just a "little cheaper" than elsewhere. These specials should sell at sight.

Prettiest Wash Fabrics

We say prettiest, for surely there never were any prettier Wash Fabrics than these we are showing. Organdies, Dimities, Batistes, French Ginghams, Lawns and Voiles crowd each other for room, and when you consider that the prices are so very low the goods become very tempting.

Embroideries : An Endless Variety

There are All-Overs, Edgings and Insertions—baby width, medium widths and flounce widths. Patterns from a fraction of an inch to a half yard, with unusually liberal margins. The designs are beautiful, artistic and diversified. Neat exquisite effects for baby clothes and women's lingerie, dainty styles for trimming waists and showy elaborate combinations for flounces and ruffles.

BECK & IVENS

Real Estate Brokers

If you are in the market for a Water Front or Inland Farm, Town or Village property, it will be to your advantage to see us or write for our Catalogue to see the many bargains that we are offering.

NO. 110. "Napley," a beautiful water front estate, on Chester river. Napley is beautifully situated on Chester river, in Kent county, Md., and contains 448 acres of well-improved land, 340 acres tillable, 108 acres in good timber (easily $6,000 worth of timber can be cut off this farm); 4,000 peach, 800 pear and about 80 apple trees in good bearing. Large 12-room frame dwelling, newly papered and painted, 2 large porches and fine shade, 6-room tenant house and another smaller tenant house; 10-stall stable, granary and other necessary outbuildings in excellent condition; 2 pumps, fine water and good fencing. This is one of the most desirable water fronts on Chester river; the dwelling is erected on a high knoll, affording a most beautiful view of up and down the river; fine harbor for motor boats. This property is extremely pleasant in summer high and healthy, and for a summer home on the water it is difficult to surpass. The soil is easy to till and very responsive to cultivation, therefore this property combines both the summer home and a profitable farm. Price $22,000; is absolutely going to be sold. Write at once.

NO. 128. Trenchard Farm, situated within 1½ miles of Church Hill, in Queen Anne's county, Md., and containing 150 acres of well improved land, 30 acres of which is set in good and valuable timber and the balance tillable; 200 keiffer pear trees and other fruits for family use. The improvements consist of a new 9 room frame dwelling with large cellar and porches; 8-stall stable, granary and corn crib combined, with large loft; 60 foot implement shed, and all other necessary outbuildings new and in excellent condition, 2 fine wells of water. This farm is nicely situated, the land is of good quality, medium loam, the buildings are only two years old and of good material and nicely painted; the fencing is practically new, galvanized wire. It is a paying investment, and for anyone looking for a farm for a home this one would be difficult to surpass. We are offering this farm for sale at $6500, on easy terms, and feel confident it will not be in the market long. So if inrerested write at once or call to see.

NO. 112. Pretty water front, in Kent county, on Lankford's bay, 132 acres of land, 12 acres of woodland and balance tillable; apples, pears, cherries, damsons, half acre Gooseberries and grapes for family use; 7 room brick house, 5-room tenant house, stable, barn and all other necessary outbuildings in good repair. This property affords a most beautiful view of Lankford's bay; the house is erected on a high bluff with a gradual slope to the bay. Price $3500. Fish, oysters, etc., plentiful; delightful in summer and comfortable in winter.

NO. 97. ¼ of a mile of railroad station in Second Election District of Kent county, Maryland; 17 acre farm, 15 acres of which are tillable land, 2 acres in meadow nicely fenced and running stream; 7 room frame dwelling, papered and painted; 3-stall stable, carriage house, granary, meat house, 2 poultry houses, etc., fencing good and fine drinking water. This farm is situated nicely; school and church practically on farm. Price $2,100.

NO. 124. In Kent county, ½ mile from Worton, 76 acres of good land; 5 room house and all necessary outbuildings, in good condition. This farm is in a very high state of cultivation; has 1000 pear trees, 500 peach trees and nice apple orchard; good well of water, and only half mile from railroad station, school and church; it is a good bargain. Price only $1,000.

DEEP SEA DIVERS.

Death Always Hovers Round Them While They Toil.

PERILS THEY HAVE TO FACE.

The Awful Pressure of Water and Air That May Bury or Burst Them—The Helmet Telephone a Wonderful Aid In Work and In Times of Danger.

It is surprising to learn how many uses there are for divers. The navy, of course, employs many to set submarine mines and torpedoes and to attend to investigations of the condition of ships' bottoms. Bridge construction companies use them, as do those who build dams, waterworks and reservoirs. Waterworks in large cities keep a diver on their staff constantly. Wrecking companies need their services, and the profession of underriver tunneling makes many demands on the time and skill of the man in armor.

Since Smeaton in 1779 designed a pump to supply air to the diving bell little real improvement in the art has been made, save in detail of helmet and clothes, until the invention of the telephone. The greatest advance ever made in the art, divers will tell you, is the combination of the telephone with the diving suit. Before its advent divers had to depend entirely upon pulls on the life line for communication with the surface and upon signs to each other when under water if two wished to communicate. Today the modern diving helmet is equipped with a telephone, and the diver can not only hear what is said to him from the surface, advise those in charge of his pump as to whether the air is "coming right" or not, but he can communicate to a brother diver and hear the instructions sent to him from the surface, all of which facilities are of great assistance in the work.

At first thought it may not seem so difficult a thing, this going down under water and breathing air sent in from a pump by a tube. But the physical drawbacks to the work are enormous. For every ten feet a diver descends he sustains an additional pressure of four and a half pounds over every square inch of his body. What this means may be better understood when considering the greatest depth ever made by a diver—204 feet. His body at that depth sustained a pressure of eighty-eight and a half pounds to the square inch over and above the fifteen pounds always sustained when in the air.

Divers must descend very slowly, swallowing as they go; otherwise they may bleed at the nose and ears and even lose consciousness. And they must ascend even more slowly than they descend, particularly when coming from great depths; otherwise they may literally burst from internal air pressure. At the least, too sudden a rise may cause an attack of that terrible disease known to tunnel workers called caisson disease, or the bends, in which air gets into the tissues under pressure and causes the most extreme torture.

The diver, getting ready to descend, clothes himself in very heavy underwear of guernsey or flannel, the drawers well secured to prevent slipping, and adds a pair of heavy woolen socks. If the water be cold two such suits may be worn. If the depth to be negotiated is great cotton soaked with oil is put in the ears or a heavy woolen cap pulled down over them. Shoulder pads, if worn to take the weight off the helmet, are next tied on, after which the diver wriggles into his heavy suit of rubber and canvas. Next come the inner collar and the breastplate, which are secured with clamps to the rubber dress, the utmost care being taken in this operation not to tear or pinch the rubber. Finally the shoes are fitted on and the rubber gloves clamped to rings in the sleeves.

The helmet is the last to go on, and never before the valves and telephone have been tested. The attendants start to pump as the helmet is clamped home. The helmet is attached to the pump with a rubber tube, which is canvas and wire protected. No diver descends, after the helmet is put on, until he has tested the outfit and found that his air supply is sufficient and the pump working properly.

He is supplied with a life line, with which he can signal should his telephone get out of order and by which he may be drawn to the surface should he become helpless for any reason. He must take great care when walking about on the bottom not to foul his life line or his air tube and for this reason must always retrace his steps exactly to his starting point if he has gone into a wreck or about any obstructions. For the same reason two divers working together must be careful not to cross each other's path.

Sometimes the life line may become so entangled in wreckage that it must be cut, and then there is danger of the diver not finding his way back to his boat or float, especially if the bottom is muddy and fouls the "seeing." But the greatest danger of all, of course, is that the tube be cut or the diver faint. In either case he is in desperate straits. If the man handling the life line "feels" anything wrong he will haul the diver up willy nilly and regardless of the severe bleeding at nose and ears which will result from too rapid a rise to the surface. But if the diver be inside a wreck or if his life line gets tangled in wreckage such hauling would do no good. It is in situations like these that the slender connecting link of telephone wire means so much to the men who risk their lives far beneath the surface of the water.—Scientific American.
