Movies

Boasting an elaborate cast and gay music, "Caravan" comes to the screen of the New Lyceum Theatre on Monday and Tuesday evening as the featured attraction for these evenings. A story of one of the romantic Tyrolean provinces. "Caravan" is filled with scenes of the vineyards, of love and song. of laughter and gay comedy. Loretta Young has the leading role, as a young Princess, while Charles Boyer, foreign film star, plays the part of a gypsy who wins her love. The cast also includes such players as Jean Parker Louise Fazenda, Eugene Pallette, Noah Beery and Phillips Holmes.

This film is Boyer's first appearance in an American film and he is depicted as a singing hero. His voice has received the plaudits of critics, while, equally as enthusiastic, "Caravan" has met with great praise everywhere.

* * *

For Wednesday and Thursday evenings Cecil deMille's much-talked-about "Cleopatra" will be the featured attraction at the New Lyceum Theatre. With Claudette Colbert as the Egyptian queen, Warren William as Caesar, and Henry Wilcoxon as the redoubtable Marc Anthony, "Cleopatra" in all its lavish splendor will be unfolded before the eyes of local play-goers.

This story is of the romance that shook the world, the greatest of all eternal triangles — Cleopatra, Marc Anthony and Julius Caesar—and a love story that has come glittering up through the ages to live with us as one of the greatest of all romantic tales. How Caesar journeyed across the Mediterranean to woo the queen of the Nile how Marc Anthony cut him out and then plotted his death, is revealed vividly in this startling film of stupendous proportions.

Directed in the typical de Mille manner, where gigantic sets send shivers of wonder through the watcher, "Cleopatra" is a film that will live long in your memory. It is worth seeing.

For Friday and Saturday there will be two features presented at the New Lyceum Theatre. Jack Holt will appear in "I'll Fix It" as one of the stellar attractions, and George O'Brien will be seen in "Dude Ranger," a western film with a new twist.

Golden Wedding Anniversary

Mr. and Mrs. Lemuel C. McGinnis celebrated their golden wedding anniversary Sunday at their home at McGinnis' Corner. A splendid turkey dinner was served by the children, viz., Oliver and Ruth at home, W. Howard andwife, Edgar A., wife and son, Allen, Thos. J. and wife. The bride was attired in her wedding gown of dark blue taffeta. Ice cream was served to the many friends who called to congratulate the couple. Joel McGinnis and Mrs. Emma Hazel were among the guests at dinner.

Birthday Party

On Saturday evening there was a "Surprise Party" held at the home of Mr. and Mrs. Ralph Copper, on the farm. The occasion being in honor of their sister, Miss Mildred Copper's 18th birthday. At 7.40 p. m. the guests began to arrive; about 35 being present. The evening was spent in a very enjoyable time. Many beautiful gifts were received and refreshments of ice cream, cake candy and fruit were served, and at a late hour all left wishing Miss Mildred many happy returns of the day.

Dairymen Fear Ban

Faced with threats that they will be prohibited from shipping milk into territory in which they are charged with violating rules. Eastern Shore dairy men are complaining of the stringent regulations imposed by the Pennsylvania and New Jersey Board of Health.

Winning Essay On The Uses Of Ice

(By ELLA P. ROBINSON)

The following is the winning essay in a contest recently conducted by the Chestertown Ice Plant:

De we need it? Absolutely. In this progressive age the idea of doing without ice is not even entertained. We must have it no matter how made or how preserved. The most practical use of ice is to

Preserve Foods. Meats, perhaps, the highest cost of foods must not be wasted. Take a roast for instance. To be at its best it must be fresh when purchased and of good size, more than enough for one meal in a small family. The remnants of the first meal must be kept in good condition to use again. There are many ways of serving left over meats, and when prepared in attractive ways and served upon different days, one will not tire of eating the same kind of meat. The point, however, is to have the meat keep its pristine purity until all of it has been consumed. Here is where ice plays its part in the household economy.

Bread, the Staff of Life. Mostly today this is purchased already baked, but when a change is wanted, we welcome the cook who gives us home-made rolls or teacakes. The dough for these can be made before the day of serving if desired and kept in the ice box. When needed, it can be taken out shaped and baked.

Ice Box Cookies. One reason why cookies seemingly went out of style in cookery was that homemakers disliked the tediousness of rolling and re-rolling the dough. Today ice box cookies come to the rescue. The dough is made into a roll like a roll of butter and put into the ice box until icy cold. Then it is put on a floured board, shoved off with a sharp knife and baked in a hot oven. Result, delectable cookies!

Vegetables and Fruits. It has been said that salad is our truly 'All-American' dish. It is also admitted that food should appeal to the eye as well as to the palate. To make salads pleasing to both eye and palate the vegetables must be fresh and crisp. This can be attained by their stay near ice. Then, for instance, with an arrangement on crisp lettuce or romaine, of firm red tomatoes, slices of cucumber, strips of green pepper and topped with yellow mayonaise, the salad is an attractive picture as well as an appetizer. Fruits can also be arranged artistically in salads. Fresh vegetables and fruits, with a good refrigeration system and storage facility, may be bought several days ahead whenever a supply is available in market or whenever a desirable price is quoted.

Sea Foods. Fish, crabs, etc., must be put on ice after the catch and kept there during the process of selling.

Milk, Cream, Butter. Milk, although certified or pasteurized, must in summer be kept near ice until ready for use, whether in preparation for baby's food, or as a drink for older children, or fofr use in cooking. Ice must keep the cream sweet for our coffee, and must hold the butter in check lest it spread itself all over the butter dish. What is less attractive on the table than soft, melting butter? Speaking of cream and butter recalls the problems housekeeprs had in earlier times during the summer season making butter without the use of ice. The cream after each skimming had to be lowered into the well, then pulled up again to admit the next skimming and soon, in order to keep it sweet and pure and at the right temperature for the churning. Then when the batter was made it must seek the recess of the well to keep it in firm condition for sale or use. This was hard work. Of course some favored few country homes had ice to use from their own ice houses. These were supplied with ice cut from rivers and ponds when a winter was cold enough to freeze water sufficiently hard for cutting and gathering the ice. Today ice from our ice plants is trucked out into the surrounding rural sections and hailed with joy by our farmer wives for their various needs.

Refreshing Drinks need ice. What would be do in the good old summer time without the drinks that ice make so refreshing? Fountain Drinks—coca cola, milk chocolate, lime, lemon and orange ades. Home drinks—ice water, iced tea and coffee, cocoa shake and punch. Fruit juices may be prepared long before using, alone, or several in combination, put into the ice box until ready for use. Then into tall glasses, filled three quarters full of cracked ice, these juices can be poured over the ice, and presto, a drink fit for the gods!

Frozen Desserts please the palate. We would be comparatively lost without our frozen desserts, especially in sumer. Even without an electric refrigerator as a household equipment, pleasing frozen desserts may be made with a small inexpensive freezer and plenty of ice—mousses, parfaits, sherbets, custards and ice cream, the latter, an old and reliable standby without which folks would be at a loss. Imagine, to, the boys and girls without an ice cream cone! Lamentable existence!

The Sickroom's friend in need—ice. Enter a hospital. You see a patient with an ice cap on his head to allay pain or lower temperature; another is being fed cracked ice to quench a feverish thirst; another, unable to take ice, has his fevered lips moistened with pads dipped in ice water. A drink of ice water, or cracked ice itself is one of the best agents in nausea or gastric distress. Ice packs limit inflamation, ease pain, prevent bruises, are useful in all fevers, indispensable in sunstroke and very refreshing in even minor indispositions. Ice must be used, too, to keep cool diffrent medicines, especially the various serums.

Buildings sometimes use strange materials. In the Polar regions, Eskimos build their igloos, or homes of blocks of ice and snow. The ice is used as windows to admit whatever light may be gotten during the long winters. Inside the igloos, ledges of blocks of ice covered with skins of wild animals serve as beds.

Science uses ice in various ways. Laboratory Work—In laboratory tests ice is used to get liquids down to a temperature desired. It is used also to liquefy different gases. In marking thermometer scales, crushed ice is used to get the mark for the freezing point.

Air Cooling—Some railroads use ice in their air-conditioned cars. Fans blow air over the ice, and then the cooled air is wafted out and through the cars.

Sculpture—In cold climates, sculptors often chisel their models, using ice as a medium.

Cold Storage Plants—The cold storage building erected by the U. S. Government at Manilla, Philippine Islands, is probably unexcelled in scientific construction. It has a storage capacity sufficient to store enough food to feed an army of ten thousand men for three months. But in addition to its large mechanical freezing apparatus, it has an ice plant with a daily output of forty tons.

Weather Forecasting—Ice may aid the weather man. A new way to forecast weather from slight earthquake like tremors found to exist in ice floes in the Arctic Ocean is being experimented upon. Both ocean currents and storms are important in forecasting weather over the Arctic Ocean, also the weather of the lands farther south is affected by these air movements in the Arctic regions. Many of the cyclonic storms which determine the weather of the U. S. originate in the Pacific Ocean near Alaska and farther north. To detect and chart these vibrations, it is planned to set up quiver recorders on the shores of Wellen and Wrangel Islands, believing the information will be a valuable aid to exploring expeditions in the far north.

Engineering—Once in building a bridge in the Middle West, where jacks could not be used to lower an engineering structure upon its foundations, the structure was placed upon cakes of ice, the unit pressure being 20 lbs. per sq. in., and then as the ice melted, the structure was lowered to its final resting place. This feat was very successful. Ice has been used in other engineering problems of the same nature.

Refrigeration by ice gains favor. Mechanical refrigeration supplies the needs in large concerns where other modes of cooling could not be used. However, in ur households by means of the newest style refrigerators, ice still holds its own. These top and side icers claim many points of excellence. They keep the inside temperature at 50 degree and below, distribute moist air throughout, insure perfect sanitation, remove gases and odors from the food chamber, assure a small expense in running, and do not destroy the food flavor, nor rub the food of its vitamines. An instance is noted of preferred ice refrigeration. Some schools in the West and Southwest, where cafetaria service is rendered, having tried other means of refrigeration, have discarded those methods and are turning to ice refrigerators. They also are using ice manuals as text books in their home economics classes.

The Ice Industry gives employment to many. With the numerous uses of ice, both natural and artificial, since ice become an article of commercial value, thousands of people are given employment in making, procuring, distributing, and otherwise using ice.
