Hood's Sarsaparilla

Has made itself welcome in the homes of the people the world over, by its wonderful cures of all blood diseases and run-down conditions.

Get it today in usual liquid form or chocolated tablets known as Sarsatabs.

Constipation

"For over nine years I suffered with chronic constipation and during this time I had to take an injection of warm water once every 24 hours before I could have an action on my bowels. Happily I tried Cascarets, and today I am a well man. During the nine years before I used Cascarets I suffered untold misery with internal piles. Thanks to you, I am free from all that this morning. You can use this in behalf of suffering humanity. B. F. Fisher, Roanoke, Ill.

Pleasant, Palatable, Potent, Taste Good. Do Good. Never Sicken, Weaken or Gripe. 10c, 25c, 50c. Never sold in bulk. The genuine tablet stamped C C C. Guaranteed to cure or your money back. 939

DR. W. H. MAY, 573 Pearl Street, New York.

A Peculiar Code Of Honor.

"Some men," said Al Trotter, well known clubman, at a banquet recently, "have very queer ideas of honor.

"I was riding from Pitsburg to Philadelphia in the smoking compartment of a Pullman. There were perhaps six of us in the compartment, smoking and reading. All of a sudden a door banged and the conductor's voice cried:

"'All tickets please!'

"Then one of the men in the compartment leaped to his feet, scanned the faces of the rest of us and said slowly and impressively:

"'Gentlemen, I trust to your honor.'

"And he dived under the seat and remained there in a small silent knot until the conductor was safely past."—Philadelphia Times.

Why The Minister Was Mad.

John Garvin, one of the elevator men at the state house, manages to get into speaking terms with almost every passenger he carries. The other day a heavy weight stepped into the elevator, carrying two heavy suit cases.

John sized him up as the elevator started for the fourth floor.

"Your goods in a liquid state?" he ventured, taking the visitor for a "jughouse" man.

"I'll have you understand," replied the visitor caustically, "that I am a Methodist minister, and am on my way to the conference at Atchison."

But the preacher saw the joke in a moment and laughed along with Garvin, who refused to apologize.—Topeka Capital.

Children Especially Like

The sweet, "toastie" flavour of

Post Toasties

Crisp, fluffy bits of perfectly ripe white corn—cooked, rolled and then toasted to an appetizing brown.

Served with cream and sometimes fruit, this dainty food pleases the whole family.

Give the home-folks a treat.

THE FARMER'S HOME AND ACRES

Get a Good Foundation.

If about to start in the poultry business, whatever else you do, get good stock. Your future as a poultryman depends upon the foundation upon which you build. Better start with a trio of first class birds than a dozen of inferior or even mediocre quality. Buy of a reliable breeder whose strain is established and keep this strain pure. Do not think you are economizing in buying cheap and inferior stock to start with.

Low Prices Past.

Low priced live stock of all kinds has had its day. It is not to be presumed that the present prices will hold long, but they will never reach the low prices of years past. Stockmen and farmers should receive justifiable incomes from their labors. The great prairies and plains of the West have had their day as pasture lands for stock. Other uses will be made of them, and the future supplies must come from the thousands of small farms.

To encourage this the owners of these small farms should have protection in prices for what they may raise and not permit them to be wholly at the mercy of the merciless meat trusts.

What To Feed Horses.

Editors Indiana Farmer:

Wouldn't it be profitable to buy cottonseed or linseed meal to feed horses, when one's feed consists of corn and timothy hay. Reader.

Answer:—As spring advances and you are feeding only corn and timothy hay, it would be well for the condition of the horses to feed a small amount of such meal, as they are high in protein, and will put horses in higher condition for spring work, relieving the tendency to constipation. One to two pounds of linseed meal per day, or about the same amount of cottonseed meal per day, mixed with bran or corn meal, as the usual quantity fed to horses, fed as yours are now being fed.

Don't Neglect the Yard.

While cutting the hay put on the farm you will of course be very busy, but don't get so much so that you forget or neglect the yard about the house. A few minutes with the lawn mower now and then will do the work all right.

"The mower, do you say? Not half the farmers of the country have such a thing." I know that, and I am sorry it is so, too. We ought all to have a mower of that kind just as much as we do a broom for the house. We ought to use it, too, so that the lawn might always look neat and trim. The farm home is where we live. Far more than we know does the appearance of things about this home shape our lives and that of our children and our neighbors.—Epitomist.

Old-Fashioned Ways.

Experts recommend the "shaking test" for eggs. We never tried after once, when the egg went off like a bursting electric light bulb. We needed a kerosene bath from head to foot and clothes from the skin out. Do not let your little boy put an egg up to his ear and shake it. It may make him stink like a dead mule. After a little experience simply wrap the first finger and thumb of the right hand around the egg and look through at a light or the sun, using one eye, while the left hand covers the other eye. Another egg tester is a lamp with a dark, stiffened imitation leather-like shade all around it, the shade having a hole in it to fit the egg lengthwise. Again, a hole the size of a pullet's smallest egg may be cut in the center of a large dark piece of cardboard. Each egg is placed over the hole as the tester is held before a strong light. A good way is the old keyhole test, a knothole in the sunny side of a dark hen house or smoke house. Hold the eggs up before the knothole and let the sun shine through them, somewhat as every boy has held his finger over a keyhole and watched his finger as the sun rays showed him bone, a form of X-ray, as it were.—New York Press.

Handling Setting Eggs.

Some are so careful in handling setting eggs that they take them out of the nest with a spoon instead of the hand, but this is carrying things to extremes. Simply bring the eggs in and keep them in some old, clean woolen rags, some place where they will get neither chilled nor warmed, and unless too many are put under one hen, in about eighteen or nineteen days the chicks will be out of the shell. The fewer days chicks are hatching the stronger they are as a rule.—New York Press.

The Value of a Pure Bred Bull.

"There is, perhaps, no other important factor connected with beef production that is as often disregarded as that of the selection of bulls to head the herds of grade cows from which are produced the feeding cattle of the country.

The breeder of feeding cattle, whether he fattens them himself or sells them to cattle feeders, cannot afford to use a common bull of indiscriminate breeding. Feeding cattle that are well bred and possess quality enough to weigh one thousand pounds or better at two years old are worth all the way from $40 to $50 per head, depending upon their individual quality and condition. Such feeding cattle can be produced from grade beef cows mated with choice beef bulls.

Common and inferior feeding cattle that are produced from common cows and grade or scrub bulls frequently attain an age of three or more years before they reach one thousand pounds in weight. Such feeders at such an age and weight are worth from $27 to $30 each. The lesson should be plain that it does not pay to use an inferior bull that sires the steer that pays the owner but nine dollars per year for his keep against the one that pays twenty-two dollars to twenty-five dollars per year.

"It may be claimed that the fault is not altogether with the bull. We grant that. But suppose the cows are the same in either case, the well-bred bull will produce feeding cattle which will grade at least two grades higher than the feeding cattle produced by the mediocre bull.

"There is usually about thirty-five cents per hundred-weight difference in price between one grade of feeding cattle and the next higher grade. If the well-bred bull raises the grade of his offspring two grades, he adds to the value of each animal he sires seventy cents per hundred-weight, or to the one thousand pound steer seven dollars.

"Properly cared for, a bull should sire from forty to fifty calves per year. For sake of argument, suppose we say he sires forty. If he should increase the value of each of his offspring but five dollars, a very conservative estimate, he earns at least $200 with his first crop of calves. It is no exaggeration to say that as compared with the use of an inferior bull the registered beef bull pays for himself the first year."—Herbert W. Mumford, Chief Division of Animal Husbandry, University of Illinois.

Practical Poultry Points.

The French method of preparing poultry for market is acknowledged in some respects, superior to others. The birds are made very fat and plump, and are manipulated to increase plumpness. A few feathers are left on tail and neck. The skin is white and delicate. Each carcass is tied with a ribbon, and is shown back uppermost, instead of breast up, according to American and English usage.

It is when the duck is not laying that she readily takes on fat.

Corn, barley and buckwheat are very fattening grains, the latter having a tendency to whiten the flesh. Sweet potatoes are sugary, and as such are fattening, but give a yellow tinge to the flesh.

Scientists tell us that a ton of wheat contains 41 pounds of nitrogen; barley, 32 pounds; oats, 38 pounds; corn, 32 pounds peas, 70 pounds beans, 81 pounds; hay, 31 pounds clover, 39 pounds; milk, 10 pounds; potatoes, 6 pounds.

The late M. Barral of France laid down the rule that in every case the food given should be in proportion to the weight of birds, taking into consideration their active nature and such accessory products as eggs and feathers. Generally speaking, an average hen will consume three ounces of grain per day, or over a bushel in the course of a year.

Some poultrymen in the South use rosin in dressing poultry, claiming that by its use they can do the work quicker and more thorough. The fowl is first dipped in cold water, then with a perforated can powdered rosin is sprinkled all over the feathers. The fowl is then scalded in the usual manner, and the whole coat—pin feathers and all—it is said, comes off very easily in the mass, and the job is complete. It does not in the least affect the appearance of the skin.

No success can be obtained with poultry unless the fowls are kept comfortable. A fowl drenched with rain is not comfortable. A man caught in a rain storm can change his clothing and thus save catching a cold, but a fowl must allow her clothing to dry on her. No fowl can stand a constant exposure to inclement weather, and the more we protect them the better will be the results.

Capons, generally, are dressed by leaving feathers on the neck from the head down two-thirds to the shoulders. They are also left on two first joints of wings, on tail, half way up the back and on legs from knee joint two-thirds up the hips. All the rest of the feathers are taken off.

Boston market prefers the head of the fowl taken off at the throat. Strip the blood out of the neck; peel back the skin a little remove a portion of the neck bone; and then, just before packing, except in warm weather, draw the skin over the end and tie and trim neatly.—Weekly Witness.

Notes.

A cool, well ventilated pen is ideal, but it must be free from drafts or you will surely have trouble.

If it is possible the quarters for the sheep should be so arranged that the sun can shine in all or most of the day.

Difference in individuals to produce maximum flow of milk should prompt every dairyman to weed out his inferior animals as early as possible.

It is not fair calculation to take the average of the herd as the basis of computing annual profit from the dairy. Let each individual stand on her merits.

Without reasonably accurate records of each cow in the herd no dairyman can expect to improve his standard of production. There is nothing that helps out like figures when it comes to grading up the herd.

Nearly every dairyman has had some experience in shrinkage that comes in mid-summer when pastures become dry. It is an advisable plan to look ahead and make some provision early and avoid the pinch.

Corn ensilage can be fed to sheep, but be very careful if it is at all sour. Nothing gives better results than clover or alfalfa hay and turnips, with a small quantity of a mixture of wheat bran, oats and oil meal.

From the lowest mammal to the noblest man milk is the flesh builder and giver of nerve power. It is the one purpose that serves an indispensable purpose in the perpetuation of the human race. Let it then be pure and sweet at any cost.

A Package Mailed Free on Request of

MUNYON'S PAW-PAW PILLS

The best Stomach and Liver Pills known and a positive and speedy cure for Constipation, Indigestion, Jaundice, Biliousness, Sour Stomach, Headache, and all ailments arising from a disordered stomach or sluggish liver. Sweden and Spain have fewest alien residents.

Her Scalp Itched Intolerably.

"Just about two years ago, some form of humor appeared on my scalp. The beginning was a slight itching, but it grew steadily worse until, when I combed my hair the scalp became raw and the ends of the comb-teeth would be wet with blood. Most of the time there was an intolerable itching, in a painful, burning way, very much as a bad, raw burn, if deep, will itch and smart when first beginning to heal. Combing my hair was positive torture. My hair was long and tangled terribly because of the blood and scabs. This continued growing worse and over half my hair fell out. I was in despair, really afraid of becoming totally bald.

"Sometimes the pain was so great that, when partially awake, I would scratch the worst places so that my finger-tips would be bloody. I could not sleep well and, after being asleep a short time, that awful stinging pain would commence and then I would wake up nearly wild with the torture. A neighbor said it must be salt rheum. Having used Cuticura Soap merely as a toilet soap before, I now decided to order a set of the Cuticura Remedies—Cuticura Soap, Ointment and Pills. I used them according to directions for perhaps six weeks, then left off, as the disease seemed to be eradicated, but toward spring eighteen months ago, there was a slight return of the scalp humor. I commenced the Cuticura treatment at once, so had very little trouble. On my scalp I used about one-half a cake of Cuticura Soap and half a box of Cuticura Ointment in all. The first time I took six or seven bottles of Cuticura Pills and the last time three bottles—neither an expensive or tedious treatment. Since then I have had no scalp trouble of any kind. Standing up, with my hair unbound, it comes to my knees, and had it not been for Cuticura I should doubtless be wholly bald.

"This is a voluntary, unsolicited testimonial, and I take pleasure in writing it, hoping my experience may help someone else. Miss Lillian Brown, R. F. D. 1, Liberty, Me., Oct. 29, 1909."

Forty per cent. of all the year's deaths in London occur in December, January and February.

WOMEN'S ILLS.

Many women who suffer with backache, bearing-down pain, headaches and nervousness do not know that these ailments are usually due to trouble with the kidneys. Doan's Kidney Pills remove the cause.

Mrs. Rudolph Ruscke, 44 Wilson St., East Buffalo, N. Y., says: "For several years I had severe headaches and was so dizzy I feared to go out. I lost thirty pounds in weight and for a whole year could not do my housework. After doctoring and using different remedies without help, Doan's Kidney Pills brought relief and finally a cure."

Remember the name—Doan's. For sale by all dealers. 50 cents a box. Foster-Milburn Co., Buffalo, N. Y.

A Sceptic.

Knicker—My dear, I was detained at the office.

Mrs. Knicker—I won't believe it unless you have data and a scientific companion.—Harper's Bazar.

May Rank With Marshall.

There is no other branch of the government in which a man of exceptional force and character and idealism can exert a more permanent influence upon republican institutions. Mr. Taft is looking forward to "22 years of solid usefulness" on the part of Mr. Hughes as a justice of the Supreme Court, and this "solid usefulness" may be quite as enduring as the work of a Marshall or a Story.

In these circumstances New York's loss becomes incidental and trivial.—New York World.

Universe Running Down.

It is absolutely certain that the machinery of the solar system is running down. The earth, with its mass of 3,000 trillion tons, moving through space a thousand times faster than the express train goes, is being retarded by the friction of the atmosphere and tides to the extent that it loses about an hour in 16,000 years—a very slow process, it would, seem, but one that will inevitably bring the earth to a standstill ultimately. And what is true of the earth is true of all the worlds and suns. Sir Isaac Newton maintained that the motions of all bodies in space suffer retardation, and that their velocity is steadily becoming less and will finally cease. Solar systems, like everything else, have their time to be born and their time to die.—Chicago Examiner.

POPULAR SCIENCE & INVENTION

Prof. Lowell announces that he has discovered a new canal a thousand miles in length on Mars.

Experiments with the ultra-violet light appear to show that it is more effective for sterilizing liquids than ozone.

One of the oddest domiciles on earth is that erected at Yokohama by Dr. Vander Heyden, the noted bacteriologist, of Japan. This is a dust-proof, air-proof, microbe-proof building of glass, which stands in the open, unshaded grounds of the hospital of Yokohama.

Electric power is furnished to Helsingor, Denmark, from Sweden by means of a cable which runs under the narrow sea separating the two countries. The power is generated at a three-hundred-foot fall of the Laga river in Sweden and is conducted to the coast by means of cable, where it connects with a submarine cable three miles long.

A novel method of recovering a sunken cargo has been adopted by the United States Steel Company. A large magnet, 3 1-2 feet in diameter and weighing 3000 pounds, has been employed in raising kegs of nails from a barge that was sunk in the Mississippi river near New Orleans. The magnet raised five or six kegs at a time, or about a ton at each lift. The advantage of this method was that it avoided breaking open the kegs, as would have been the case had a dredge been used. The magnet is soon to be used for raising a sunken load of woven wire, and also for a load of steel baling strips.

For cases of asthma, bronchitis and tuberculosis a new compressed-air method has recently been put in use by several London physicians. The patients are placed in a hermetically-sealed boiler provided with windows for conducting written communications with those without, and are made to breathe compressed air, which is pumped into it. Here they remain half an hour before the air has reached its maximum compression, an hour more, during which the air remains under full pressure, and yet another hour, while the pressure subsides again to its normal 15 pounds. Though it has been found that this system is beneficial to the patient's health, whether it is due to the increased quantity of oxygen in the compressed atmosphere, or whether to the expansion of the cells of the lungs, the physicians themselves are not ready to say.

RARER THAN RADIUM.

Strange Traits of the Element Polonium, Discovered by Mme. Curie.

The most interesting feature of yesterday's meeting of the Academy of Sciences was the announcement by M. Lippmann that Mme. Curie, together with M. Debierne, had succeeded in isolating the tenth part of a milligramme of polonium, a substance which is 5000 times more rare than radium and which was discovered by Mme. Curie alone before she shared in the task of finding radium. This infinitesimal quantity of polonium is, nevertheless, the largest yet obtained and was the result of treating five tons of pitchblende with hydrochloric acid. The achievement is, perhaps, more valuable scientifically than practically, for, although polonium is far more radioactive than radium, and especially productive of more alpha rays, it is far less permanent. While it has been calculated that radium does not lose any appreciable atom of volume of length in a thousand years the quantity of polonium just obtained appears already to have wasted by half in a hundred and forty days.

Among the distinguishing properties of polonium it is found that it throws off sensible emanations of ozone and helium, and its spectrum reveals the existence of seven rays which are not detected in any other cognate substance. It decomposes chemical and organic substances with the greatest rapidity, and though it is contained in a vase of quartz, one of the substances most refractory to chemical action, the receptacle is split and cracked in all directions. It is the transmutations which polonium appears to undergo which offer the most scientific interest, and if they are accurately defined it is believed that a revolution will have been effected in chemical science.—Paris correspondence of The London Standard.

Civilization and Eyesight.

It is sometimes mistakenly supposed that primitive races have naturally better eyesight than civilized ones. That is not exactly true. Nature works more slowly than that, and in the records of power or acuteness of eyesight some French artillerymen proved to be as well furnished as the most keen-sighted Arabs. Native races often appear to have keen eyesight simply because they know what to look for and where to look for it. But as soon as reading is introduced to a race short-sightedness begins to appear with progressive frequency, and some striking instances of this relation to cause and effect have appeared among the school children of Egypt.—London Daily Graphic.

A Sharp Pupil.

A schoolmaster inquired of one of his pupils on a cold day in winter what was the Latin word for "cold." "I can't remember it at the moment," said the boy, "but I have it at my fingers' ends."—New York Press.

According to the mortgage record, Manhattan island goes in debt, on real estate security, to the amount of $800,000 each day, but the daily payments keep the total to a lower proportionate level than it has ever been before.

Not Sisters

Now and again you see two women passing down the street who look like sisters. You are astonished to learn that they are mother and daughter, and you realize that a woman at forty or forty-five ought to be at her finest and fairest. Why isn't it so?

The general health of woman is so intimately associated with the local health of the essentially feminine organs that there can be no red cheeks and round form where there is female weakness.

Women who have suffered from this trouble have found prompt relief and cure in the use of Dr. Pierce's Favorite Prescription. It gives vigor and vitality to the organs of womanhood. It clears the complexion, brightens the eyes and reddens the cheeks.

No alcohol, or habit-forming drugs is contained in "Favorite Prescription."

Any sick woman may consult Dr. Pierce by letter, free. Every letter is held as sacredly confidential, and answered in a plain envelope. Address: World's Dispensary Medical Association, Dr. R. V. Pierce, Pres., Buffalo, N. Y.

As Shelley Saw Babies.

According to a story of Shelley by the Rev. Bradley Gilman, the splendid mental equipment of the poet did not include humor.

In his characteristically impassioned way Shelley was deeply interested in the problem of immortality. One day he met a nurse maid wheeling a very young child in a perambulator.

"Here is a little soul," he reflected, "recently come to earth, out of a great unknown preceding human life. Perhaps he can tell me something about the great unknown after human life. The two realms may be one and the same."

He accosted the infant twice, but, of course, gained no response, only a blank infantile stare.

"Alas! alas!" sighed Shelley. "How very reticent these little creatures are!"—Journal of Ethics.

It is estimated that 60,000 horsepower can be developed from the St. Lawrence River.

Ask Your Dealer For Allen's Foot-Ease. A powder. It rests the feet. Cures Corns, Bunions, Swollen, Sore, Hot, Callous, Aching, Sweating Feet and Ingrowing Nails. Italy has more theaters than any other European country in proportion to population.

For COLDS and GRIP.

Hick's CAPUDINE is the best remedy—relieves the aching and feverishness—cures the Cold and restores normal conditions. It's liquid—effects immediately. 10c., 25c. and 50c., at drug stores.

An English physician has placed on record a case of malaria which remained latent for 13 years.

"That Tired Feeling"

is a condition, not a theory. Far from being a matter of trivial or joking comment, it is a condition of real danger. It is a never-failing symptom of a state of the blood and nerves that will not cure itself, but, unless prompt measures are taken, will go from bad to worse. Just now, when so many contagious diseases are prevalent, it makes the system especially susceptible to attacks of sickness. To mention "that tired feeling" is to suggest the remedy—Hood's Sarsaparilla, unquestionably the most successful blood purifier, nerve tonic, appetizer, and general "spring medicine." It makes people well.

The Philippines are adopting the rattan furniture business.
