"COLD IN THE HEAD"
is an acute attack of Nasal Catarrh.
Those subject to frequent "colds in the head" will find that the use of HALL'S CATARRH MEDICINE will build up the System and render them less liable to colds. Repeated attacks of Acute Catarrh may lead to Chronic Catarrh.
HALL'S CATARRH MEDICINE is taken internally and acts through the Blood on the Mucous surfaces of the System, thus reducing the inflammation and assisting Nature in restoring normal conditions.
All Druggists. Circulars free.

LESSON FOR JULY 2

EZEKIEL, THE WATCHMAN OF ISRAEL

LESSON TEXT—Ezekiel 2:1-3:21.

GOLDEN TEXT—Seek ye the Lord while He may be found; call ye upon Him while He is near; let the wicked forsake his way, and the unrighteous man his thoughts; and let him return unto the Lord, and He will have mercy upon him; and to our God, for He will abundantly pardon.—Isa. 55:6-7.

REFERENCE MATERIAL—II Kings 17:13, 14; Isa. 6:1-13; Jer. 1:1-19; Matt. 23: 37-39; Acts 20:18-21, 26, 27, 29-31.

PRIMARY TOPIC—The Shepherd and His Sheep.

JUNIOR TOPIC—Ezekiel Watches and Warns Israel.

INTERMEDIATE AND SENIOR TOPIC—Facing a Hard Task.

YOUNG PEOPLE AND ADULT TOPIC—The Duty of Warning Others.

I. Ezekiel's Call (vv. 1, 2).

1. Commanded to Stand Up (v. 1). Ezekiel was given a vision of the Almighty God on His throne of glory (ch. 1). Before the vision the prophet fell prostrate upon his face. The essential equipment of a minister for the discharge of his task is a vision of the Almighty.

2. Filled With the Spirit (v. 2). By the Spirit the divine energy entered him and enabled him to execute the commission given to him.

II. Ezekiel's Commission (vv. 3-8).

1. The Moral Condition of the People (vv. 3, 4). (1) A rebellious nation (v. 3). This rebelliousness perhaps referred to their heathen idolatrous practices. (2) Impudent children (v. 4). "Impudent" literally means "hard of face." It means the grossest perversity which caused them to stand up in the presence of the prophets of God without a sense of guilt or compunction of conscience.

2. The Charge (v. 4). He was to deliver the message of God. He was to declare, "Thus saith the Lord God."

3. The Difficulty of His Task (vv. 5-8). He was to deliver the message of God whether they would hear or forebear.

III. Ezekiel's Experimental Qualifications (2:9-3:16).

Before one can preach to others he must have an experience—must be in sympathetic accord with God and His message.

1. Eating the Book (2:9-3:9). This book contained God's woes upon the stiff-necked and rebellious people (v. 10). In order to speak God's threatenings effectively to others we must inwardly digest and appropriate them ourselves. The eating of the book was in his mouth as honey for sweetness. Though his ministry was difficult and the judgment severe, the prophet was in entire sympathy with God's purpose and found delight in His will.

2. Urged on by the Spirit (3:10-14). In order to strengthen Ezekiel for his task, the wonderful symbolism of God's providential agencies which had been before him in chapter 1 was brought to his attention, assuring him that God would accompany him to his new destination.

3. Entering Into Sympathy (v. 15). In order to minister to a people one must enter into sympathy with them; must show that the message is from the depth of the heart; that to declare the message of woe is a great grief. Ezekiel mingled his tears with theirs.

IV. Ezekiel's Grave Responsibility (3:17-21).

God made him a watchman. Every minister is a watchman over his flock. Two things were required of him:

1. To Hear the Word at God's Mouth. The source of his message was God's Word. So today the minister is to get his message from God.

2. Sound the Warning (v. 17). After he heard God's message he was to speak it out. The same duty is upon the minister today. Cases in point for his guidance (vv. 18-21):

(1) When God says to the wicked "Thou shalt surely die" (v. 18), and the watchman fails to warn him, the wicked man shall die in his iniquity, but his blood shall be required at the watchman's hand.

(2) If the watchman warn the wicked and the warning is unheeded (v. 19), the wicked man shall perish, but the watchman has delivered his soul.

(3) When a righteous man turns to do iniquity and God gives him over to stumbling in his own sin, his past seeming righteousness will be of no avail, but his blood will be required at the hand of the watchman if he fail to warn him (v. 20).

(4). If the watchman so warns the righteous man that he fall not into sin, the man shall be saved and the watchman hath delivered his soul.

Ministers have most solemn obligations, that of discharging their obligation whether men will hear or forefear.

The Wise Shall Understand.

Many shall be purified and made white, and tried; but the wicked shall do wickedly; and none of the wicked shall understand; but the wise shall understand.—Daniel 12:10.

Being Wise.

It is better to be wise and not to seem so, than to seem wise and not to be so.—Plato.

Honest Error.

Honest error is to be pitied, not ridiculed.—Chesterfield.

FARM BUREAU NEWS

MANUFACTURERS NOW USING APPLES TO THE LAST SEED

The thoroughness with which the apple is now worked over and utilized by some manufacturers makes it comparable with the packing-house pig that leaves only a futile squeal. The apple is not transformed into such a variety of products as the pig, but all are useful, and when the last of the series has been made hardly a smell is left.

In many of the apple-using factories the apples are first pressed to produce cider, which may be sold as such or may be manufactured into vinegar. After thorough pressing the pomace is treated with hot water to remove the pectin, which, after purification, is sold in either liquid or solid form to manufacturers of jellies and similar products and to housewives. The much-wasted and squeezed residue is dried, ground, and sold as cattle feed.

SEVENTEEN-YEAR LOCUST DUE IN ILLINOIS, IOWA, INDIANA

The 17-year locust, or cicada, as it is more properly called, may be expected this year in Illinois and southern Wisconsin, with small broods along the Lakes. In Indiana, on the board of Lake Michigan, and in the southern tier of counties in the State of Michigan, the characteristic whirring noise of the cicada will be heard. A big brood will appear in eastern Iowa.

Unlike the locusts of the Bible, which were really destructive grasshoppers, the 17-year cicada does but little damage of a serious nature. Interest in it is due chiefly to its unusually long life cycle. The Bureau of Entomology of the United States Department of Agriculture will welcome observations on this year's occurrence in order to maintain its records, from which is forcast the reappearance of the various broods. There are about 30 broods of the 17-year cicada scattered over the United States in different sections and appearing in different years. From 1924 to 1928 almost no cicada will be seen.

EASY WAY OF RIDDING ROSE BUSHES OF SAWFLY LARVAE

The foliage of roses is very frequently attacked by sawfly larvae, which feed upon the leaves and cause the bushes to become unsightly and weakened, or at least much less beautiful and ornamental, says the United States Department of Agriculture. Three common species of sawfly larvae eat the leaves of roses, and are found in many parts of the United States east of the Rocky Mountains.

They are easy to control. Knocking them some distance from the bush with a stream of water is a simple remedy. Since they eat the leaf tissue thoroughly spraying the leaves with a stomach poison, such as 3 rounded teaspoonfuls of powdered arsenate of lead to 1 gallon of water whenever the larvae begin to appear will kill them and thus prevent the injury.

If only one generation of the insect occurs, as in the European rose slug, one or two spraying should eect control; but if there is more than one generation, as with the coiled rose worm and the bristly rose slug, a closer watch will have to be kept upon the bushes and spraying done more often.

MIXING CEMENT WITH SOIL NEW IDEA IN ROAD BUILDING

Mixing cement with certain types of soil to alter the characteristics of the soils and make them more suitable for road surfacing and subgrades, is an experiment recently conducted by the bureau of public roads, United States Department of Agriculture, which is now proving its value in actual use. The treatment was first suggested and tried out at the Arlington Experimental station of the bureau. Results warranted a field test, and it was arranged with the California State Highway Department to try it on the adobe soil there.

A part of a Federal aid project in Solano county was selected for the test. The dry soil was well broken up and harrowed to a depth varying from 6 to 12 inches and mixed with cement in the proportions of 1 part cement to 10 parts soil and 1 part cement to 20 parts soil. It was intended to water and roll the surface, but rain prevented. One section was allowed to remain untreated for purposes of comparison. A recent inspection showed that the untreated section was badly broken up, due to the usual shrinkage cracks characteristic of adobe soils. The treated sections were in good condition and showed no shrinkage cracks. The treatment is not intended to make a hard surface like concrete, but to alter the properties of the soil so that it will be stable and lessen the effects of moisture.

Should Consult Food Authorities

While the careful housewife usually labels her jellies, jams, canned fruits, and vegetables for her own later information, the United States Department of Agriculture suggests that if she intends to sell any of her products she should consult the state food authorities as to the regulations concerning weight or measure and ingredients and the proper labels to be used.

Out of writing paper? We have just what you would like, no matter who you are. Come and see! The Amercan Union.

ARE YOU KEEPING YOUR MIND FIT ?

Nowadays many a man or woman does a daily stint of regular exercises. And a fine thing, too. That Daily Dozen has brought better health and keener zest in life into many a home.

All the more strange, therefore, that regular exercises of the body have not suggested to people how regular exercises of the mind can also bring in their train a full quota of benefits. How few persons—how lamentably few—have applied this principle of methodical mental exercise as a means to vigorous happiness. Does your mind do its regular Daily Dozen—or even half dozen? Do you eliminate your mental flabbiness by systematizing two or three matters a day? Do you reduce the superfluous trivialties of your intellectual waistline by attentive pondering of something worth while daily? Do you take a few deep breaths of spiritual fresh air every twenty-four hours by reading even a few lines of real poetry? Do you tense the muscles of your mind periodically over something which at first seems difficult, and make those muscles firm and alert?

In short, what are you doing each and every day to cut down your mental fat and strengthen your mental sinews?

—Collier's.

Uncle Johns Poem

CHINA

Last two or three years, we've harbored grave fears—for China. . . . In fact we shed tears till they filled up our ears—for China. . . We mourned till we're sick, at "The Rape of Shantung" and howled in disgust that the rapers ain't hung, while political bally-hops doleful sung—of China.

I've figgered myself, that we ort to reform—old China . . And I mighty nigh cussed, when the Jap took a swarm—to China. . . I pictured the Chink with a foot on his neck, while the ravisher gobbled his little brass check—then I sent up a howl, to the echo, by heck—fer Chiney.

Right now—when the mourners could bring her relief—old China—she ups an' declares she ain't got any grief—dear China. She's gentle, and stupid, and chronic, and stale—she don't mind the crupper that's under her tale—And the tears we have shed, somehow didn't prevail—in China.

Yours Uncle John

FARMER JONES was progressive. He believed in good barns, good outbuildings. But there he stopped. He thought that fire insurance was too expensive. "Would never need it, either."

One day a pile of straw and litter caught fire. From a small fire it became a big one. It consumed his barn, and seriously damaged his homestead.

—and Farmer Jones lost EVERYTHING! He was not insured!

Are You Farmer Jones? Where would you be if your property was consumed? Remember, every day of the year fires are busy devouring the work of years. It may visit you tonight. Tomorrow——?

Be safe—be sure—INSURE—at once, Today. Let us tell you how little fire insurance really costs.

IT'S THE FASHION NOWADAYS

to "advise" the farmer. The less a man knows about farming problems the more capable he thinks himself of solving them.

There are times, however, when a farmer seeks reliable information.

At such times—at all times, in fact—the facilities of this bank are at the disposal of our farmer-friends.
