D. P. Leonard, manager of the Frankford Sea Food Market, of Frankford, Pa., some time ago told the Elizabeth City, N. C., "Independent," a story that should be of interest to every shad fishermen. He said: "Recently we received a box of shad from Florida and sold same to our best trade. And everyone of those shad came back. Examination showed that the shad had been contaminated by gasoline or other oil. And come to think about it, the average shad boat is constructed without a bulkhead to shut off the engine from the main compartment. In the engine pit there is usually several inches of water and this water contains much oil and grease from the engine. It is the easiest thing in the world for several shad to get into this oily water. This delicate fish immediately absorbs the odorous stuff and the fact can not be easily detected until some one has bought and cooked the fish."

This is a pointer for hundreds of shad fishermen; keep the shad away from the gas engine, even if it is necessary to put a bulkhead on the shad boat to do this. —N. Y. Fishing Gazette.
