THE QUEEN'S NAVY.

England's Eight Marine Monsters—Their Size and Armament.

The Inflexible is the largest and most powerful ship of the British navy, and, leaving out Italy's four huge iron-clads, is the most formidable war ship in the world. Each of the four guns of the Inflexible carries a shot that weighs 1,700 pounds, and all four can be fired at once and in the same direction. The vessel is simply an armored citadel, with unprotected ends lying beneath the surface of the water to keep her afloat. Although 320 feet in length, the armor protected portion, in the center, extends only 110 feet, but as the Inflexible is seventy-five feet wide, the citadel thus inclosed is of generous dimensions. It rises ten feet above the surface of the water, and is six feet five inches below it; but as the vessel is sunk by water ballast a foot in going into action, the protection beneath the surface of the water is increased to that extent.

The Ajax and Agamemnon are exact reproductions of the Inflexible in every respect except size. They are forty feet shorter, fourteen feet narrower, and draw twenty-three and a half feet of water. Their displacement is 8,500 tons and their speed thirteen knots. In these vessels the citadel is 101 feet long and the armor upon it eighteen inches thick. The armored deck over the submerged hull is six feet below the water level, and the height of the citadel above the water is nine and a half feet. The turrets are arranged in the same manner as those of the Inflexible, and they are armed with four thirty-eight ton guns carrying a 750 pound shot.

The Devastation, Thunderer and Dreadnaught are of the same class, although they differ in minor points of detail, and may be described as mastless monitors. The Devastation is 255 feet long, sixty-two feet wide, and draws twenty-six feet of water. Her hull, engines, boiler and magazines are protected by twelve inches of armor at the sides and her deck by three inches. She has two turrets, plated with fourteen inch armor, and carries in them four thirty-five ton guns, capable of sending a projectile weighing 700 pounds. These turrets are enclosed in a central armed citadel, the deck in front of it being given up wholly to the waves in rough weather, but a narrow deckhouse, running between the two turrets, is opened out at the top so as to form a spacious hurricand deck twenty-four feet above the water. The Devastation has a speed of nearly fourteen knots and can carry 1,000 tons of coal—enough to take her a distance of 9,000 miles. She is a very handy vessel, and can make a complete circle at full speed in a diameter of 339 yards in four minutes and thirty-four seconds.

The Thunderer is similar to the Devastation in every respect except that her four guns are of thirty-eight tons and are worked by hydraulic machinery. She is about half a knot slower than the Devastation, her speed being 13 1-2.

The Dreadnaught on the other hand, is more than half a knot faster than the Devastation and is a bigger ship, being about 1,500 tons larger. She carries heavier armor on her sides (fourteen inch instead of twelve inch), and her armament, like that of the Thunderer, is four thirty-eight ton guns.

The Colossus and Edinburgh which were launched in 1882, and are now about to be placed in commission, are like the Inflexible, but of different dimensions. The latter, with a length of 325 feet, had a width of seventy-five feet, so that it was difficult to obtain much speed without a great waste of power. The new ships are 325 feet long and only sixty-eight feet wide, and their displacement is 9,150 tons. They are very fast, the Colossus having a speed of sixteen and one-half and the Edinburgh of sixteen knots. Their armor is eighteen inches thick and steel-faced, and they each carry four forty-three ton guns in their turrets and four six-inch breech loaders. The forty-three ton guns are also breech loaders, and greatly superior to the thirty-five and thirty eight ton guns with which the Devastation and Dreadnaught are armed.

FIVE STRANGE SIGHTS.

The Oldest Thing on Earth—Lakes of Soda—An Odd Procession—A Ninth Century Cemetery.

In the heart of Wyoming Territory is a mountain of solid hematite iron, with 600 feet of it above the ground, more than a mile wide and over two miles in length; a bed of lignite coal big enough to warm the world for centuries; eight lakes of solid soda, one of them over 600 acres in extent and not less than thirty feet in depth, and a petroleum basin that contains more oil than Pennsylvania and West Virginia combined, from which in places the oil is oozing in natural wells at the rate of two barrels a day.

Trees were found in Africa which were computed to be 5,150 years old, and a cypress in Mexico is said to have reached a still greater age. The oldest tree, if not the oldest living thing upon the globe, is the cypress of Santa Maria del Tule in the Mexican State of Voxaca. The life of this venerable forest monarch has spanned the whole of written history. At last accounts it was still growing, and in 1851, when Humboldt saw it, it measured forty-two feet in diameter, 126 feet in circumference, and 382 feet between the extremities of two branches.

Suppose we have a balance gigantic enough for the purpose, and the sun is resting on one of the scales. Now put the earth in the opposite side of the scale. You might as well weigh your head against one of the towers of the East River Bridge. Pile a hundred thousand earths into the balance, and the sun does not stir. There lies the colossus immovable. Put get together another hundred thousand, and then another hundred thousand, and stack them up in the pan against the sun. Three hundred thousand worlds piled up on one side of the balance and still the sun keeps them up. It would take 30,000 more, or 330,000 earths, to make them beam even against a single sun.

A strange sight was presented in the streets of Tucson, A. T., one day last month. A woman appeared carrying a child's empty coffin on her shoulder, followed by a lot of little girls. Later the scene was reversed and the coffin was borne by four little girls, followed by several women. It is no uncommon sight there to see a coffin borne to the grave on the shoulders of a man, but a woman rendering the service was a novel spectacle.

An ancient burying ground was recently unearthed in Paris while digging a trench in the Rue Salande. The coffins of stone and plaster found there have been traced to the seventh, eighth and ninth centuries. They were pointed to the east, and had crosses inscribed on a circle, symbolical of eternity, and other emblems of Christianity. The coffins were found filled with dirt, their covers having given away.

A WORTHY OLD CUSTOM.

Planting a Fruit Tree Whenever a Child is Born.

A beautiful custom was once in vogue in Switzerland, which could be turned to valuable account in this country if generally adopted. When a child was born, a fruit tree was planted at some place along the highway, the fruit of which was always free to the passer-by. The pride of the parent would always be to plant a choice specimen of its kind, and so highly esteemed was this custom, that no one would injure the tree in any respect but rather, if possible, promote its growth. The child, when of sufficient age, would feel a pride in nursing the tree, and also, realizing its ownership, feel identified with the country and imbibe from its earliest recollection a spirit of patriotism. If it is more blessed to give than to receive, then there can be no simpler and easier way to bring the child early into possession of this blessedness, than by such a gift of fruit which may be as acceptable at least to the wayfarers, as a cup of cold water to a thirsty traveler.

This custom of tree-planting might be carried much farther and only profitable results follow. A line of shade trees along the land—and where is there a farm, without a lane?—adds immensely to the homelike appearance of the farm, making it a pleasant and comfortable summer's drive for young and old, and why may not those trees be fruit trees? Cherry, mulberry and peach, with elm, walnut and maple alternated, blending their foliage and their health-giving fruits for man's pleasure and benefit. One of the ways of keeping the children at home is by making home pleasant, and nothing adds so much to the pleasantness as to have shady walks lined with flowers to greet the eye and the songs of birds to greet the ear. The trees and flowers we must supply and in doing so we induce the birds to come and abide with us.

THE TWO WIVES.

Look on This Picture and then on That—Nature vs. Art.

In a certain city, says the Chicago News there were two wives named Gerda and Hulda. Although their two homes adjoined, these wives were in very different social stations, for Gerda was the wife of a very proud and rich man, while Hulda was the wife of a humble artisan. Gerda's house was lofty and spacious and was adorned with most costly and most beautiful things, but Hulda's house was a scantily furnished little cottage. The difference in their social stations did not, however, prevent Gerda and Hulda from being very friendly in a proper fashion, and these two frequently exchanged visits while their husbands were away from home.

One day Hulda was at Gerda's house, and Gerda said: "I must show you the painting we have just received from Paris. It is the most beautiful painting in the world and it cost a princely sum of money."

And Gerda took Hilda into an adjoining chamber and uncovered the picture, and for a long time Hulda stood admiring it in silence. It was indeed a masterpiece of art. Such beauty of conception, such elegance of design, and such nicety in execution had never before been seen. It was a marvel of figure and color and effect.

"Is it not the most beautiful in all the world?" asked Gerda.

"It is very beautiful," replied Hulda, "but it is not the most beautiful picture in all the world."

Then Gerda took Hulda into another chamber and showed her a jeweled music-box which the most cunning artisans in all Switzerland had labored for years to produce.

"And you shall hear it make music," said Gerda.

And Gerda touched the spring and the music-box discoursed a harmony such as Hulda's listening ears had never heard before. It seemed as if a mountain brook, a summer zephyr, and a wildwood bird were in the box vying with eachother in sweet melodies.

"Is it not the most beautiful music in all the world?" asked Gerda.

"It is very beautiful," replied Hulda, "but it is not the most beautiful music in all the world."

Then Gerda was sorely vexed.

"You said that of the picture," said Gerda, "and you say it of the music. Now tell me, Hulda, where is there to be found a more beautiful picture and where more beautiful music?"

"Come with me, Gerda," said Hulda.

And Hulda led Gerda from the stately mansion into her own humble little cottage.

"See there upon the wall near the door?" said Hilda.

"I see nothing but stains and marks of dirt," said Gerda. "Where is the picture of which you spoke?"

"They are the prints of a baby hand," said Hulda. "You are a woman and a wife, and would you not exchange all the treasures of your palace for the finger-marks of a little hand upon your tinted walls?"

And Gerda made no reply.

Then Hulda went to a corner and drew forth a pair of quaint, tiny shoes, and showed them to Gerda.

"These are a baby's shoes," said Hulda, "and make a music no art can equal. Other sounds may charm the ear and delight the senses, but the music of a baby's shoe thrills the heart and brings the soul into the communion with the angels."

Then Gerda cried "'Tis true, O Hulda! 'tis true." And she bowed her head and wept. For she was childless.

A Cow Story.

"Hillo, Mike, a happy New Year till ye! An' have ye a cow ye waant to sell an' it givin' milk?"

"Sure an' I have the foine cow, an' it's jist givin' herself away wid milk she is."

"An' how much is she givin' at a milkin', thin?"

"Come here till I tell ye now. An' it's this very marnin' that she give eighty-four quarts av milk, an' I hope to die ef she didn't."

"Begorra, Mike, an' it's lyin' ye are now, sure."

"It's not lyin I am at all, at all. An' if ye don't believe me ye may come round to-morry marnin' an' see her milked, if ye loike; but I'll not sell her to-morry, an' I *will* the day, if I ken get me price for the wance askin' an' the money down, for it's a good cow she is, an' I'm not carin' to sell her onyway."

"It's too much yer axin' for her' an' I don't waant a cow to flood the house, do ye see."

"Och, it's only the fair price that I waant fer her, fer she'll not be givin' that quantity fer long, thin, av course, an' she bein' new milks agin before the year's out, if ye mind."

A satisfactory price was agreed upon, the money paid and the cow driven off by its new owner. But Mike was called upon the next morning by his friend with an angry complaint that he had been cheated, that the cow only gave four quarts, "an' niver a dhrap above, so she didn't."

"An' wasn't it yerself said ye didn't waant a cow to give overmuch? An' aside from the milk, what have ye to complain of, onyway?"

"The cow is a party cow enough, but ye lied about the quantity, so ye did."

Mike, turning towards the house, called to a woman standing in the door. "Come here till ye tell Patsy how much the cow I sold give ye at a milkin'."

"Four quarts sure," said the woman.

"An' ye said eighty-four quarts, sure as I'm livin'."

"You're a soft one to think a cow *cud* give eighty-four quarts at a milkin'. Mike told the truth, fer me name is Aitie, an' *didn't* she give Aitie four quarts at a milkin', I ax ye."

This was a genuine transaction, and the best of it was that Patsy, after looking at his friends for a moment, took of his hat, and making a low bow, said, "I forgive ye, fer the sake av the joke.—*Harper's Bazar.*

The Church of the Future.

How long will it take yet until the Church of the Future will be established in this free country? By the Church of the Future a church is meant in which all preaching or teaching is strictly based upon truth and honesty. In the Church of the Future the resources of the preachers or teachers will exclusively be reason, common sense, and morality. In the Church of the Future the preachers or teachers will find these resources only in their own heads and hearts. The Church of the Future will disregard the Bible, which is not an American book, but a product of foreign lands. The Church of the Future will reject the compulsory celibacy of the priesthood, because, according to the American principle of equal rights to all in all matters of public concern, of which matrimony is one—being recognized and protected by law—every man in this country is entitled to found a home and family. The Church of the Future will oppose the claim of power in this country of a (foreign) spiritual potentate, because it violates the American Constitution, which ordains a republican form of government for every state of the Union. The Constitution of the United States grants full and absolute religious liberty and liberty of conscience to the American people. The Church of the Future will live up to this freedom in this country, recognizing no other authority for true religion than the eternal laws of the human mind and of the human heart. The Constitution of the United States, the supreme law of the land, grants full and absolute religious liberty and liberty of conscience to the American people, and renders religion and its exercise a strictly private affair.—*John Geo. Hervey, of Washington.*

A Clergyman on Shavings.

Rev. Dr. Paxton, in a lecture before the Mechanics' and Tradesmen's Union, of New York city, a few evenings ago, stated in a few words many truisms. Shavings, the lecturer said, were not of American invention, like whittling but were as ancient as the working of metals by Tubal Cain. They are the necessary waste of every work. There is a certain loss from every gain; there is no building without its rubbish heap to remove, which requires almost as many carts as to bring the building material. The fewest substances in nature are found pure. Construction is based upon destruction. Every joy presupposes a sorrow. The door posts of progress are sprinkled with the blood of its martyrs, and along the way are scattered like millstones the bodies of those who have fallen in the path. We cannot get something for nothing; for every tit there is a tat. The wrecks of rich men's sons to be seen everywhere show that it is as hard to keep as it is to get. Without toil there is no substance; hence the recklessness with which estates are squandered, without any regard for the toils and hardships that had to be undergone to procure them. It may be likened to the sacrifice of human life at the battle of Bunker Hill, through which the salvation of our country was procured.

CLOTHING FOR EVERYBODY.

With a large and varied stock of Clothing for Men of every trade, for Boys and Children of all ages, we are quite certain of meeting the demands of every class of buyers at prices that must give satisfaction.
