Your Dollar's Opportunity

Your dollar's opportunity is now, today! Set it to work for you. Give it the task of multiplying itself. In doing so it will perform its part in the world affairs.

Every man's money should be making use of this opportunity. Farmers, for instance, can not only feed the world; through businesslike handling of their farms and businesslike handling of their incomes they can help to develop the world.

Thrift Is Patriotism

Saving is a form of serving. It is one of the biggest forms of national service—service to your country. Our first president said, "Economy makes happy homes and sound nations."

The way to start right is to start right now! Saving is as much a habit as spending or putting things off. Once formed, it is easy to continue. But unlike other habits, it is a good habit.

WHEN A FELLOW'S STRONG AND WELL

and the world seems his to conquer it's pretty hard to work up any real concern over the future.

But assuredly it deserves some serious thought—for no one can afford to forget that youth is the accepted time of preparation for old age.

The man who consistently builds up a savings fund forestalls dependence in later years.

This institution welcomes the young peoples' accounts.

FARM BUREAU NEWS

POISON IVY OFTEN BLAMED FOR HARM BY OTHER PLANTS

Although poison ivy is one of the worst offenders, it frequently is blamed for poisoning caused by other plants, says Dr. W. W. Stockberger, of the United States Department of Agriculture. The department has a list of more than 100 of such plants that grow in this country, and it is probable that there are others that may be poisonous to some persons. Not all of these plants are equally poisonous, and, too, there is great variation in the susceptibility of persons.

Because some of these common plants are used for ornament in the home is no reason to fear them, as most persons are not affected by them and in great majority of cases the irritation of the skin is mild. This would probably hold true of such plants as the tomato, geranium, daffodil, and many others that are known to cause skin poisoning. Such plants, though, as the nettles, are irritating to most persons.

In the long list of plants having these toxic properties are the following, which are well known, but not all of them generally known to be poisonous. Aconite, ailanthus, asparagus, catalpa, dog fennel ladies slipper, wild carrot, hop, lobelia, oleander, nightshade, ox-eye daisy, parsnip, pokeweed, smartweed, primula, buttercup, poison elder or poison dogwood, blood root, mullein, ccklebur, and the mustards. The pollen of the easter lilly, has been known to cause irritation of the skin, but this is probably as rare as poisoning by leaves of the geranium or the carrot. Some of these plants are poisonous when taken internally, but the list has been made out on the basis of being irritating to the skin.

DIFFICULTY IN TESTING CANADA BLUEGRASS SEED

Canada bluegrass seed seems to be extremely sensitive to a number of conditions that affect its germination and for that reason the United States Department of Agriculture is trying to develop a method for testing it that will give uniform results. Up to the present time bluegrass seed has been giving seed dealers and State analysists much trouble.

The department, in its attempt to determine the factors influencing the germination of Canada bluegrass, has found a great variation in the behavhavior of various samples. All samples are found to require a daily alternation of temperatures for successful germination. A temperature of 20 per cent. C. for 18 hours and 30 per cent. C. for 6 hours is satisfactory. Many samples give a distinctly higher germination when exposure to light is added to the above temperature schedule. However it is important that the temperature schedule be not sacrificed in obtaining the light exposure.

Some samples of Canada bluegrass do not germinate completely even with the above conditions satisfied. Work in progress is expected to determine all the factors necessary to make a dependable germination test of Canada bluegrass possible.

ORPHANS COURT

At the regular session of the Orphans Court on Tuesday there were present their honors, Judges West, Harper and Shawn and the following business was transacted:

In the absence of the court, the register of wills granted letters testamentary on the personal estate of Mary E. Seward, deceased, to Ida Cooper. Bond filed and approved, notice to creditors ordered, and John H. Mitchell and John E. Luff were named as appraisers.

Harry A. Roe, executor of Mary L. Emerson, deceased, filed an inventory and appraisement of the personal property and an order to sell was granted. Also was filed an appraisement of the real estate.

On application letters of administration on the personal estate of Jennette Williamson, deceased, were granted to C. W. Bradley. Bond filed and approved, and William I. Norris and Ferdinand Baynard were named as appraisers.

James L. Miley, administrator of the personal estate of William K. Miley, deceased, filed releases from Elizabeth E. Miley, William H. Miley and James L. Miley, distributees.

Tilghman C. Layton and John F. Kelley, administrators of the personal estate of Sarah A. Layton, deceased, filed a release from Minnie Thawley, distributee.

On application letters of administration on the personal estate of Sarah E. Haymond, deceased, were granted to Bertha E. Pitcher and John E. Haymond. Bond filed and approvd, notice to creditors ordered and Thomas A. Cleaves and S. P. Brown were named as appraisers.

The truth is that a lot of movie actresses are not as bad as most folks hope they are.

WORK AGAINST HOG CHOLERA EXTENDED TO OTHER STATES

The United States Department of Agriculture this year extended its cooperative hog-cholera control work to South Dakota, Washington, New Mexico and West Virginia, making a total of 34 states in which work is being done in cooperation with state authorities. Cooperation among the different agencies is now at its best, and is therefore more effective than ever.

The object of the work with the various states is to prevent and control outbreaks of hog cholera, and to prevent the spread of the infection and to reduce losses.

During the year, hog cholera has been kept well under control, but special care must be taken in October, November and December, when usually there in an increase in its prevalence. Farmers will save more hogs and prevent disastrous losses if they do not delay reporting immediately to the state veterinarian, the county agricultural agent ,the representative of the Bureau of Animal Industry, or local veterinary practitioner any suspicious cases of sickness among their hogs. Anti-hog-cholera serum is not a cure, but a preventive treatment, and should be applied as soon as possible when the disease appears in the herd or in the neighborhood. The preventive treatment is a good insurance against losses from hog cholera.

MAP WILL SHOW PRODUCTION OF DAIRY COW BY COUNTIES

"Are you proud of the cows in your county?" is the question asked by the United States Department of Agriculture on a map on which is shown the average production of dairy cows in practically every county in the country. This large map will be shown in the department's Exhibition, at St. Paul, October 7 to 14. Dairymen may thus see at a glance just how the cows at home compare with those in any other part of the United States.

The map shows that 7 counties have cows that average more than 6,020 pounds of milk a year. Three of these counties are in Washington, while Oregon, California, Nevada, and Texas have one each. The exhibit also shows an analysis of the census figures made by the Department of Agriculture, in which it is brought out that the States which lead in average production per cow are those in which the highest percentage of dairy bulls are purebred. The States are marked off into four groups according to the production of 4,427 pounds of milk a year and 42.5 per cent. of the dairy bulls are purebred. In the fourth group the average production is only 1,606 pounds of milk and only 1.4 per cent. of the dairy bulls are purebred. In the first group there is one purebred dairy bull to every 10 dairy farms, while in other groups there is only one to every 82 dairy farms.

The 48 States are arranged in the order of the percentage of dairy bulls purebred. Arizona, where the dairy business has been of recent development, is at the top of the list, with 91 per cent.

HARMONY

Mr. and Mrs. Alonzo Christphor of Berlin and Mrs. Andrew Christphor of Hurlock, spent Sunday with the formers parents, Mr. and Mrs. John Christphor.

Mr. James Lord of Franklin, Va., is visiting, his sister, Mrs. William Thomas.

Mrs. Harry Aringdale, of this place and her sister Mrs. Nora Richmond, of Denton have gone to Philadelphia. They were called on account of the serious illness of their mother, Mrs. Stack formerly of Denton.

Mrs. Thomas Chaffinch of Denton is spending the week with her sister, Mrs. Louise Aringdale.

We are sorry to report Mr. John Williamson, one of our oldest citizens, was paralized Monday. He was on a load of fodder when the attack came.

Mr. Eugene made a business trip to Wilmington, Del., on Monday.

Mr. John Williamson, who was paralized this morning died today at 12 o'clock. He was 80 years old and had always enjoyed the bbest of health.

Dr. Albert S. Cooke, State Superintendent of schools and Professor Gibson, State Supervisor of music, will speak at the Harmony school, Wednesday evening October 11th at 8 p. m. All are cordially invited to attend.

Purchased Home

The Rev. Mr. Levi K. Zeigler has purchased the home of Mr. M. M. Luzader, 7th street and will move to his new home some time in November.

Mr. Luzader has not completed his future plans as to what he will do.

TRESPASS NOTICES

Post your lands with No Trespass signs if you would keep the hunters off. These signs obtainable at The American Union.

—it's not the original cost but the upkeep.

To Local Merchants

Your motor trucks and delivery wagons make it possible for you to render to your customers complete and satisfactory service.

Think this over and then ask yourself: "What would it mean if fire should destroy my motor equipment?" It would mean the loss of a car and load. It would mean disruption of service and dissatisfied customers.

You can protect your trucks against fire by equipping them with Pyrene Fire Extinguishers. This can be done at a nominal cost, since Insurance Companies will rebate to you on your motor insurance policies 15% of the premium when your motor equipment carries Pyrene.

Pyrene won't freeze, won't damage machinery, insulation, or anything with which it comes in contact. It is absolutely sure on gasoline or oil fires and its simplicity of operation make no previous instruction in its use necessary.

We will equip your motor trucks and delivery wagons with Pyrene Fire Extinguishers and get the 15% rebate from whatever insurance company has written your automobile policy.
