New Fashions in Foods

By KARINE HOLMES

One of the most pleasing ways of doing green tomatoes is what we call

Maryland Relish

1 quart green tomatoes
2 quarts cabbage
5 medium sized onions
2 teaspoons tumeric
6 red peppers
1 quart vinegar
½ tablespoonful whole allspice
¾ tablespoonful mustard seed
2 tablespoonsful salt
½ tablespoonful celery seed
1 cupful sugar

Slice the tomatoes thin and let them stand over night in salted water In the morning, drain and add the

KARINE HOLMES

thinly sliced cabbage, onions and red peppers chopped fine. Put the vinegar in the preserving kettle, add sugar, spices, and tumeric, then the vegetable mixture and scald thoroughly. Put up in small jars or jelly tumblers and seal with parafine.

Quick Cabbage Chow Chow

1 large head cabbage
2 green peppers
1 teaspoonful celery seed
1 pint small onions
2 tablespoonsful salt
¼ cup black mustard seed
¼ cup white mustard seed
1 quart vinegar
½ pound brown sugar

Chop all very fine—mix. Sprinkle lightly with salt and let stand an hour then drain for three hours. Mix in a kettle with brown sugar, celery seed and mustard seeds; add vinegar, let boil up, then pour it over the cabbage, cover tightly. This chow chow may be made in the winter or summer—any time when relishes become scarce

Pickled Carrots

Cook carrots as for table. Prepare the vinegar, as for cucumber pickles, using 1 cup each of sugar, salt and mustard, to the gallon of vinegar. Scrape carrots (of course before being cooked). When cooked tender drain and pack in glass jars. Pour over them the vinegar, heated to boiling and seal at once. These are a pleasing addition to any salad all winter.

Beet Relish

1 quart cooked beets.
1 small head cabbage
1 cup grated horse radish
2 cups sugar
2 tablespoons salt
2 tablespoons mustard
2 tablespoons celery seed
1 pint vinegar

Put the beets and cabbage through food chopper and add the rest of the ingredients in order given. Let stand at least 24 hours before using. This will keep indefinitely. It may be bottled or kept in a covered crock.

Chutney Conserve

12 apples
8 green peppers
1 red pepper
1 cup seedless raisins
1 pint weak vinegar
8 bay leaves
1 teaspoon whole allspice
½ teaspoon ground mace
¼ teaspoon mustard seed
½ cup celery seed
2 cups brown sugar
¼ teaspoon paprika
Juice 6 lemons
1 tablespoon salt

Pare, core and chop the apples, chop the green peppers after removing the seeds and chop the red pepper retaining the seeds. Mix all the ingredients together and boil until thick. Seal in jars while hot. This quantity makes 4½ pints.

FEMININE TOPICS

That pleasant combination of colors, dark blue and biscuit, is seen in a suprisigly large number of street frocks. These frocks are likely to be of gaberdine of heavy silk marcoain, with a piping of biscuit satin or with panels faced in biscuit.

All steel articles can be perfectly preserved from rust by putting a lump of freshly-burned linme in the drawer or case in which they are kept.

Paste jewels as well as jet ornaments are being used on some of the new straw toques. Often these jewels do not appear on the hat itself. They are more likely to ornament the ends of the long velvet or satin streamers hanging from one side.

Three new little fancies intrigue the younger set today. One is a neckline long on the shoulders but cut out only to the base of the neck in back and front. Another is the lace or muslin cuff reaching to the knuckles and the third is a very long chain ending near the knee with a medallion or a jewel.

A remarkably effective pendant, swung on the end of a long silk cord, is a bit of carved amber. The carved amber idea is not new; the new feature is the fact that the amber is carved in the form of an inverted lotus flower, very Egyptian effect.

When the final fire of the season goes out of the furnace, thoroughly clean and brush the whole radiating surface. Remove the smoke-pipe running from the furnace to the chimney. Brush out the pipe and, if possible, put it away where it may be kept dry during the summer. Do not paint heat-pipes. Painting over bright tin or asbestos-paper-covered pipes causes a heat loss.

A cedar chest is considered the ideal place in which to keep linens, but any chest or closet is suitable, provided that the average temperature is not too warm and not too dry. Keep linens away from steam radiators and pipes.

A Full Yield from the Whole Field

There is no idle soil when a Superior Grain Drill is used in the seeding. It doesn't skip, clog or leave empty furrows. Distributes all the grain evenly at the bottom of the drill furrow insuring uniform covering. A full, even stand results, and the full stand brings the full crop. That's why

Superior Grain Drills

have won their way into the favor of the farmers who prepare and plant their fields for the extra bushels—*the all profit bushels*. Made of the choicest materials. Special features: **Double run positive force grain feeds**—two feeds in one. **Parallel disc bearings** guaranteed for life of drill. **Superior telescoping steel conductor tubes**—non-breakable; no buckling, kinking, bending or collapsing.

Made for sowing all large and small grains in 4, 6, 7 and 8 inch rows in plain grain and fertilizer styles.

Constructed for Use With Any Tractor

It will pay you to use this Drill because its effective and economical sowing will bring you greater profits in increased crops. Superior Drills are noted for lightness of draft, ease of operation and unusual strength.

SOMETHING NO LIVING PERSON CAN CONTROL

The season of electrical storms is here. In an instant a flash of lightning can cripple what geniuses of more than a half century made possible and what scientists worked over fervently to perfect. It is something over which human kind has no control. The great question, however, is how long it takes to recover from the dstructive stroke out of the sky.

There are at least 500 miles of wires, and twenty thousand poles to support them, used by your company to supply the community demands, all of which are susceptible to the elements.

During the next severe electrical storm let your thought drift to that corps of courageous emergency men the company must maintain; visualize, if you will, what are the hardships and dangers they are encountering—for service. When you shall have done this, you will readily appreciate why they might well be called minute men.

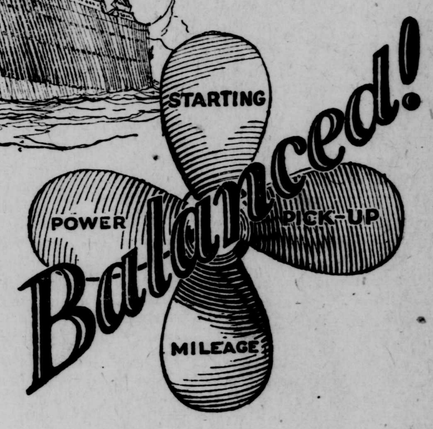
Balance! at sea and on land-



Balanced!

A GREAT ship far out at sea was shaken by an ominous shudder. One of the four propeller blades had been thrown off and before the engines could be stopped the driving shaft began to pound and whip. Sailors dangling in a rope sling went over the stern and chiseled off the opposing blade. Afterwards, with power reduced but balance restored, the vessel made port.

When a cylinder is missing your car goes by jerks. Its power plant is unbalanced. The gasoline that *feeds* your motor must be balanced. A refining experience of more than half a century and constant research have produced a finely balanced motor fuel called "Standard", the gasoline that gives you instantaneous starting and swift pick-up—maximum power and high, economical mileage. You don't have to turn out of your way to find this balanced gasoline. Every pump you meet with the red "SO" on the globe dispenses this all-round motor fuel. Use it exclusively for all-season economy and satisfaction.

Made right here in Maryland, at Baltimore. Sold at hundreds of pumps that bear this mark.
