TO INSPECT OYSTER FIELDS OF MARYLAND

Illinois And State Officials Will Leave This Morning

SURVEY PACKING PLANTS

Inspection to determine the purity of the oyster-dredging fields of Maryland, for the purpose of permitting state packers to ship to Illinois will begin today.

Dr. S. S. Winner, Illinois State epidemioligist; P. H. Cooney, chief quarantine officer of Illinois; Swepson Earl, State Conservation Commissioner, nd A. L. Sullivn, State Food and Drug Commisioner, will leave this morning on the state steamer Governor McLane.

The itinerary, which will permit Dr. Winner to view all the fields in the bay and return ti Baltimore next Wednesday evening, February 4.
ing plants on the Eastern and Western Shores.

Route Of Inspection Tour

The route will be as follows:

Proceed to Chesepeake Bay and study oyster bars in the bay and part of rivers to Cambridge, arriving Wednesdey evening, February 4.

Thursday—At Cambridge all day inspecting packing houses.

Friday—Steamer will leave Cambridge at 8 a. m. and proceed to Tred Avon river, where packing houses at Oxford and Bellevue will be inspected. A car will be taken at Bellevue to St. Michaels, while steamer remains at Bellevue wharf, return to Bellevue and steamer will proceed down bay, arriving at Solomons in the afternoon where oyster packing houses will be examined and the party will remain over night.

Saturday—Leave Solomons, proceed down the bay, studying oyster bars, and through Hoopers Straights into Tangier Sound to Crisfield, where the steamer will remain over Sunday. Dr. Winner will motor to Salisbury and make inspection there, remaining over Sunday. He will return to Crisfield, Monday morning and inspect Crisfield packing houses that day.

Tuesday—Will leave Crisfield and go through Kedges Straights, straight across the bay to the Potomac river, where most of the day will be spent. The party then will proceed to Baltimore, arriving Wednesday next.

To Examine Workers

When Dr. Winner returns next Wednesday, medical examinations of packing plant workers will have been completed. A certification form, to be issued and approved by Dr. Winner, will be prepared by the State Department of Health today.

Employes of Baltimore packing houses will be examined by the city Health Department to determine whether they carry typhoid fever.

Employes of plants in Cambridge, St. Michaels and Oxford will be examined by a bacteriologist to be stationed at Hurlock. Local health officers on the Eastern Shore will collect blood specimens from workers for examinations.

Program Is Completed

Specimens will be sent from Crisfield to Baltimore. This program was formulated at a meeting in the offices of the State Department of Health yesterday.

Plans for the identification of shipments, to prevent the substitution of unapproved oysters for Maryland oysters are being completed by oyster packers. When Dr. Winner finishes his inspection in the state he will be asked to certify oyster fields in Delaware bay in order to prmit packing of those oysters in Baltimore.

BABY CLINIC STARTS IN CAROLINE COUNTY

The regular meeting of the public health committee was not held on Tuesday because Miss Jackson, the nurse, was called away by the funeral of her uncle.

The Denton Community Club has had the floors of the rooms in the law building, used as her office, newly painted, thus making them sanitary and easily cleaned. Following is her report for January:

The work of the public health nurse is becoming more widely known. Clinics and health conferences are being held in various towns for diagnostic purposes.

Dr. Nicklas, medical director of tuberculosis association held his monthly clinic at Denton, 10 patients were examined.

In the month of January I visited Ridgely, Goldsboro and Denton schools and made the inspection of 160 pupils. The teachers are very interested in the health work, many of the schools are serving hot cocoa to the pupils at the noon hour. In this way we hope to give milk to some of the unfortunate children who are underweight and do not get it at home.

I made 45 visits to the sick this month, 7 patients of which were scarlet fever cases. In these particular cases I emphaize the importance of isolation and quarantine, also teaching the necessity of fumigation, etc.

I made the arrangement through the county commissioners for the admission of one case to the Eastern Shore State hospital and accompanied the patient to the same.

In cases of need I have supplied a number of gowns to the sick and also have done considerable charity work along with my actual nursing.

January 27th, I held a baby health conference at Federalsburg, Dr. Clift, of Baltimore, being the examining physician. Eleven children were examined and due to the stormy day many mothers were unable to bring their children. I hope to have other health conferences at various towns in the future. H. RUTH JACKSON

A CORRECTION

In the advertisement last week of William C. Bullock the size of the balloon tires on the Overland was misrepresented and the price of the deluxe 6-cylinder Overland was omitted.

DO YOU WORK UNDER ARTIFICIAL LIGHT

If you do, this message is written especially for you. Artificial lighting is often the cause of those tired, burning, aching eyes.

One cannot always remedy his working conditions, but we can relieve your eyestrain with properly fitted glasses.

Do not delay getting relief for those tired eyes.

KEEP THE SCHOOLS OPEN

Reports have reached the State Department of Health of the inclination in some places to close a school whenever a case of scarlet fever occurs among the pupils. As the members of the State Board of Health urge the opposite procedure and are convinced that all classes in a community are better protected by keeping the school open, and by having the children regularly inspected each morning, so that any one who show suspicious symptoms may be referred immediately to their family physician, or to the local health officer, the accompanying statement was prepared by Dr. R. H. Riley, chief of the bureau of communicable diseases, in order that parents may understand the reason for this reccommendation.

Scarlet fever is an exceedingly treacherous disease, not only because it is often fatal, but also because of the possibility of serious after-effects. If neglected, even a miid case, on diagnosed as scarlatina, may have disastrous after-effects on the heart, kidneys, nose, ears, tonsils, glands of the neck, or joints.

The child or adult who contracts scarlet fever should have the most careful medical and nursing attention during the entire course of the disease. The disease develops in from 2 to 7 days after exposure to the infection. It takes from 3 to 6 weeks for it to run its course, and the patient should be carefully isolated from contact with other members of the family or with neighbors and friends during the entire time. Even after the patient is convalescent it is not safe for him to mingle wtih other people until there are no longer any signs of the disease. Discharging ears are especially active means of infecting others.

The person who cares for a patient suffering from scarlet fever should wear a washable cover-all apron or gown and a washable head covering, a cap of some sort. These should be left in the sick room if the mother or nurse has to come out of the room and prepare the meals or to mingle in other ways with members of the family.

Soap and water are good disinfectants, and the hands and face of the mother or nurse should be washed carefully and well each time she leaves the sick room. Discharges from the eyes, ears, nose, throat or from any open sores on the patient should be caught on a piece of paper or soft cloth and burned.

There was a marked increase in scarlet fever in 1924 as compared with 1923 in the counties of Maryland, with 1851 cases reported in 1924, and 1586 in 1923. In January of the current year 215 cases were reported as compared with 238 for the corresponding month last year.

It is much safer to keep the schools open because it is possible in that way to keep track of the children; to detect the onset of suspicious symptoms promptly and to see that precautionary measures are put into effect without the delay that so often arises when children are not so carefully watched.

Through the work of two Chicago physicians, Dr. G. E. Dick and Dr. Gladys Dick, a scarlet fever anti-toxin has been found during the last year that has been used with marked success in a number of cases. It is used in the same way that diphtheria antitoxin is employed and its especial value is in decreasing the disastrous after-effects referred to above. It is hoped that the utilization of the same principle in immunizing persons against scarlet fever will eventually result in making the disease much less of a menace than it is now.

In the meanwhile, the disaese has to be fought with the weapons at present at our command—isolation of the sick, the best medical and nursing care, disinfection of discharges, and so mingling of sick and well, until all danger of spreading the infection is over.

HARMONY

Mr. and Mrs. German Wright and children of Easton, were the guets of Mrs. Wright's mother, Mrs. Bell Dean on Sunday.

Mr. and Mrs. John Tribbett and Mrs. Fred Payne of Federalsburg were the guests of Mrs. Tribett's sister, Mrs. Cora Todd on Sunday.

Mr. and Mrs. Clayton Satterfield of Federalsburg called on relatives here on Sunday.

Several of our people are on the sick list. Grip seems to be the prevailing ailment and mumps have come in also. Our school principle, Miss Alma Dean had to go home with the mumps on Thursday and some of the children are kept home with them.

Mrs. Carrie Collins, Mr. H. C. Todd and daughter, Jennie and Mrs. Elma Brodes all have the grip.

Miss Pearl Willis is confined to her home with grip and Mr. Edward Kelley near town is reported quite sick.

COUNTY FEDERATION TO MEET

The Caroline County Federation of Women's Clubs will meet in Preston, February 14, 1925 at the school auditorium. An unusual and interesting program is being planned.

QUEEN ANNE

The Ladies' Aid Society was held with Mrs. Dr. Rowe Tuesday afternoon. It was largely attended and splendidly entertained.

The Misses Morgan and Covey spent the week end with friends in Cardova.

Mrs. Charles Rhodes has returned from Pittsburg after a pleasant visit with the Roods, and returned by Denton to their home near Barclay.

Harris Chapel will give a box social on Monday night, February 9th in the school house. There will be an entertainment before the box social. All are invited to this pleasant evening affair.

Mrs. Price and Miss Louise spent the week end with Mrs. Price's brother, near Easton.

There was a moving picture entertainment in Tri-county auditorium Friday night. It was well patronized.

The Roods and Mrs. E. Lightner were entertained by Mr. and Mrs. George Stewart at a 5 o'clock dinner one day last week.

Although the walking was not the best last Sunday St. Paul's had 84 at Sunday school, and the collection was $14.

It has been suggested that all make from this time to Easton Sunday "go to church Sunday." Go some where to church. Denning on Sunday is very much like any other bad habit, or disease. It will harm others.

MILK PRODUCTION RECORDS FOR DECEMBER

Extraordinary records of production made in December by Maryland and District of Columbia pure bred dairy cows are announced by Le Roy W. Ingham, superintendent of official testing for the University of Maryland. A total of 233 cows were on yearly test during that month, of which 102 were Guernseys, 30 Holsteins, 48 Jerseys and 8 Ayrshires. Of this total, 64 cows made two-day official records admitting them to the honor roll, 37 of which are Holsteins, 21 Guernseys, and 6 Jersey.

The leading cow for butterfat production, all ages, all breeds is a full-age Holstein, Nockdair Suberba Gladice, owned by the Springfield State Hospital, at Sykesville, Maryland. This cow's seven-day official record is 20.404 pounds and her production for two consecutive days is 6.926 pounds. Holsteins also lead in each of the other six age classes with one exception, the senior two-year-old, which is headed by a Guernsey.

TRUTH

If Diogenes were here today—

—would he continue to seek for an honest man, at midday, with a lighted lantern?
—would he continue to sleep in a tub that he carried around all day on his head?
—would he continue to be the crafty cynic that he was in the squeamish days of 383 B. C.?

Many present day philosophers believe that these things, for which Diogenes was so well known, would be even more evident, if he could be on earth now.

It would not be as necessary, however, for him to seek the truth as he once did.

If you will watch carefully the series of advertisements of the Hearn Oil Company that will follow this announcement, you will find that truth in the advertising, and truth in the marketing of petroleum products, by the Hearn method, is as evident as it is possible to make it.

Men are much like motors; they always make better headway on the level.

In the advertising and marketing of oil, gasoline, and the other petroleum products, the general public has come to regard the manner in which they are presented with a certain amount of suspicion—and in some cases with good reason.

The creed of the Hearn Oil Company is—

TRUTH

—in production
—in advertising
—in marketing

Therefore, the statements made regarding the products of this company; the recommendations they make for the care of motors; the products themselves—ALL can be depended upon. They are all guarded with the constant degree of exactness demanded by the statement — HEARN PRODUCTS ARE AS GOOD AS YOU CAN BUY!
