CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of Chas. H. Fletcher and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhœa and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

TURNIP TOPS AS MEDICINE.

West Virginian Undergoing Novel Treatment At Hopkins.

Turnip tops, as a diet for patients suffering with certain intestinal diseases, is the unique treatment adopted for experimental purposes at the John Hopkins Hospital.

Mr. John S. Ashworth, 27 years old, of Williamson, W. Va., entered the Hopkins the early part of last month weak and ill from the disease. He was pale, had lost much flesh and had suffered for several months. It was at the suggestion of his physician that he came to Baltimore, and when he entered the hospital he was put to bed and under the hospital regime for such cases. His condition grew worse. At the suggestion of one of the house physicians, Ashworth was put on the turnip greens treatment. It is the first case of this character ever so treated at the Hopkins, and the improvement of the condition of Ashworth has been rapid.

For the first two weeks Ashworth took four or five meals of the turnip tops a day. His condition improved remarkably. After another week of the treatment his diet will be increased by the addition of a glass of milk and toast. But at present the patient eats nothing but turnip tops, which are gotten fresh daily. The attending physicians have high hopes of rapid recovery of their patient. The physicians are watching the case with much interest.

The common turnip is used. The whole growth is taken fresh to the hospital and when about to be prepared, the tops are cut off. They are cooked with great care, as the dish is unpalatable when badly cooked. The patient at first cannot get accustomed to the cooked greens, but after a day or so finds the meals very platable.

Throughout the South it is a common diet in the country districts, but it was not until a well-known physician of Alabama discovered that they had medicinal properties that their value was known. Since then he has recommended its use and adoption at the John Hopkins, and the physicians interested in the patient there feel that the treatment will be successful. In the preparation of the turnip greens ordinary bacon is used, which is boiled about half an hour. Then the turnip tops are added and let boil from one to two hours.

Hicks' Forecast For November.

A reactionary storm period is central on the 5th, 6th, 7th. We predict that storms will take on decided boreal conditions from about the fifth to the 7th; that rains will turn to sleet and snow generally to the northward, with rising barometer, change to colder and very stiff to dangerous gales from the northwest, especially in all the regions of the great northern lakes.

A regular storm period is central on the 12th, extending from the 10th to the 15th. This period will pass its crisis from Tuesday, 12th, to Friday 15th. Change to warmer, falling barometer and cloudiness will appear in western sections by 1.14 A. M., the 10th and 11th followed promptly by autumnal storms, but these storms will grow in extent and intensity as they pass over the country from west to east, reaching their climax in central to eastern sections from 12th to 15th. The moon being on the celestial equator on the 16th, the probabilities are that storm conditions may be prolonged over the date, with only moderate change of temperature and barometric pressure.

A reactionary storm period falls on the 18th, 19th and 20th. This period will bring falling barometer, with corresponding rise of temperature, followed promptly by cloudiness, rain and possibly snow. The full moon periods, and those of the new moon as well, are times when seismic shakes are far more frequent. They are also times when gales are more certain and severe on the lakes and north Atlantic. All this is especially true about the month of November. Change to much colder will rush down from the northwest about 19th to 22d.

A regular storm period extends from Friday 22d, to Tuesday 26th. It is central on the 23d. During this period look far marked depression of the barometer higher temperature and more rain, turning to snow north and west, about the 23d, 24th and 25th. It will be the part of prudence to anticipate some disagreeable, if not forceful, autumnal storms between the 23d and 26th. High barometer and change to colder, frost and freezing will follow the disturbance of this period.

A reactionary storm period is central on the last three days in the month. This period will reach its crisis on the 30th, the date upon which the moon crosses the celestial equator, going southward. Electrical storms even in winter are much more liable in storm periods, at such times. Hence November will go out with rain, and possibly lightning and thunder in many places southward, with rising barometer and rapid change to much colder heading down from the northwest with the incoming December. Upon the whole November promises to be an average month for all exposed and out door interests. Much fair and open weather will alternate with storm periods. The rainfall will be light.

Rapid changes of temperature are hard on the toughest constitution.

The conductor passing from the heated inside of a trolley car to the icy temperature of the platform—the canvasser spending an hour or so in a heated building and then walking against a biting wind—know the difficulty of avoiding cold.

Scott's Emulsion strengthens the body so that it can better withstand the danger of cold from changes of temperature.

It will help you to avoid taking cold.

ALL DRUGGISTS: 50c. AND $1.00.

FELLOW SUFFERERS.

Each Had Throat Trouble Just Like the Other.

As the commuter who always boarded the train at Paradise Hills seated himself he was conscious that the young man next him looked at him with some curiosity as they exchanged good mornings. For the first few minutes neither one spoke; then the young man broke the ice. "You have a delicate throat, I see," he said commiseratingly. "I used to be bothered that way myself."

The commuter hesitated. There was something about his seat mate which invited confidence.

"Have you been married long?" he asked, with apparent irrelevance.

"Not so very," admitted the young man. "Why?"

The commuter cautiously loosened the bandage round his throat and, turning toward his companion, displayed an absurd looking, polka dotted tie.

"We've been married less than a year," he muttered, "and she gave me six for my birthday."

The hand of his seat mate grasped his in a cordial, sympathetic grip.

"I thought so," he said. "It's only a year since I had my attack of throat trouble."—Youth's Companion.

Blowing the Nose.

Medical experts are calling the attention of the public to the importance of performing the nose blowing operation in a scientific and hygienic manner. First one nostril and then the other should be blown without undue violence. Doctors state that the two nasal passages should never be closed at the same time. If they are obstructed, as in the case of a cold, the back of the throat is filled with compressed air, and this, together with the discharge and the microbes which it contains, may be driven through the eustachial tube into the middle ear and lead to serious results. A great authority on the subject used to forbid his patients to blow their noses when suffering from a cold. The course is hardly one which will commend itself to those in the habit of catching colds. The best advice would seem to be that when it is necessary to blow the nose blowing should be done gently.—London Mail.

Wanted His Money's Worth.

"Have you any choice as to the wedding march?" asked the church organist.

"The wedding march?" echoed the father of the bride.

"Yes; the march that is played when the bridal procession moves down the aisle. Which one would you prefer—Mendelssohn's or the march from 'Lohengrin?'"

"Any difference in the expense?"

"Oh, no!"

"Then play the one that's the longest."

Silk Manufacture.

From all accounts silk manufacture originated in China. Chinese tradition has it that the Emperor Foh Li taught his people the art of cultivating the silkworm as early as 5000 B. C. Spain was the first European country to receive the silkworms, the Arab conquerors introducing them about the tenth century, probably from their home on the borders of Persia. The foundation of the silk industry in France dates from the year 1516, when Francis I. imported silk workers from Milan.

The Baby's Fault.

Nursemaid—I'm going to leave, mum. Mistress—Why, what's the matter? Don't you like the baby? Nursemaid—Yes'm, but he is that afraid of a policeman that I can't get near one.—London Tatler.

His Absentmindedness.

Professor (after dinner, looking at his empty plate in a rage)—There, we've had spinach and egg again! You know perfectly well, Amelia, that I can't eat it!—Fliegende Blatter.

Sure Thing.

"Do you believe any of the plant or arboreal kingdom would stick to man if given the choice?"

"I think the dogwood."—Baltimore American.
