Breeder's Field Day, March 31

Breeders of purebred and commercial beef cattle in Queen Anne's County are invited to a field day at the University of Maryland, Saturday, March 31. The all-day program opens at 10 A. M. in Symons Hall, but moves to the judging pavilion for a beef barbecue at noon.

Dr. J. E. Foster, head of the Animal Husbandry department will discuss the opportunities for beef cattle in Maryland with special emphasis on the outlook for the future.

Dr. W. W. Green, will speak on "Beef Cattle Selection" and also give an outline of the University's ing.

Buildings and equipment for beef research work in beef cattle breed-producers will be discussed by Ray W. Carpenter, head of the Agricultural Engineering Department. He will tell of available blueprints and plan books and answer qquestions on construction problems.

The visiting livestock will have an opportunity to tour the beef, sheep and swine barns during the lunch hour and discuss their production problems with members of the University staff.

May Enact State Withholding Tax Law

Delegates John W. Logan has been appointed chairman of a Special House Committee to study the advisability of enacting a state withholding taw law, according to an announcement made by Gordon A. Boone, Majority Floor Leader.

There has been considerable deand for such legislation from Baltimore city and Baltimore county groups. However, active opposition has been encountered from small businessmen and the Comptroller's Office.

Mr. Logan has been holding hearings on the subject with his committee during the past week and is expected to present his recommendations to the Ways and MeansCommittee thise week.

Although the proposed measure does not represent any new taxation of the public it is being studied for the purpose of securing additional revenue for the State which is now being lost by failure of certain individuals to file a state income tax return. The work of the comittee is being watched with considerable interest by both parties throughout the state because of the possibilities of additional revenue resulting without additional taxation.

Time For Auto Plates Maybe Extended

The possibility of an extension of the deadline for use of old auto tags was indicated this week by Thomas B. R. Mudd, Motor Vehicle Commissioner, because of a delay in the receipt of plates from the manufacturer.

Many applications, received in the Baltimore office, have been stamped, according to Mr. Mudd, and are being held pending the arrival of the plates. He asked that the pub- not stop payment on checks.

Press and radio release from the Commissioner's office said: "Commissioner Mudd wants every person who has sent in his checks or money order to know that the plates will be issued as soon as they are available and should it happen that they are not available for delivery to car owners by March 31, he will personally ask the Governor to authorize him to grant an extnesion. In that event, of course, the present tags may be used for the duration of the extension."

Do It Electrically
with
INFRARED
Lamps

With infrared lamps you can conveniently direct clean, safe, penetrating heat to the spot where it will do the most good. Here are a few of the many practical applications at home and on the farm.

- Brood baby chicks. Lamps give constant heat and light without fire hazards.
- Brood baby pigs. Save all the pigs farrowed in each litter; keep them warm safely in a corner away from the sow.
- Brood baby lambs. Keep them warm and dry right in their own brooder. No more carrying them to the kitchen.
- Dry stockings, infants' clothes, new glue jobs or freshly painted surfaces.
- Relieve localized pain such as arthritis, sinus pain and aching muscles.
- Start your car or tractor easily. Warm it up by directing a beam of heat to the carburetor or crankcase.
- Keep your hands warm with a "spotlight" of infrared heat when working in a cold milk-house or workshop.
- Thaw frozen pipes, especially those that are hard to get at—like elbows.

Infrared lamps can be moved from job to job as the need arises.

For further information about the use of Infrared Lamps write
