AVÆNA ELATIOR,*

LINNÆI.

Superior to all other Grasses for Upland, Meadow and Pasture.

THE Rev'd Doctor Henry Muhlenburg, of Lancaster county, in the State of Pennsylvania, in a letter to Doctor Mitchell, of New-York, gives the following account of this celebrated grass: "I have cultivated this grass a number of years from imported seed, and find it, after a great many trials, of pretty near all other grasses, *the earliest, latest, and best grass for green fodder and hay.* It blooms in the middle of May, the same time with red clover, and the seed ripens a month after. Horses are fond of the hay; horned cattle prefer it to all other grasses. It will grow best in a clover soil, and the leaves are from two to four feet high before it blossoms. In the blossom, the stock rises from five to seven feet.—It ought to be cut in blossom, and will yield an abundance of sweet, good hay; may be cut three times a season; it suffered to grow old, it will become strawlike. The seed may be sown in the fall or spring, and must be brushed in, or lightly harrowed."†

The above account, from the experience of Nicholas Ridgely, Esq. the Chancellor of this State, George Cummins, Esq. both very respectable farmers, and myself, is fully verified. From the information of these gentlemen, who have cultivated this grass a greater length of time than I have, I am warranted to say that no pasturing, however severe, can destroy it. This grass is perennial, when once sown will produce perpetually unless the ground be broken. If sown alone it requires at least two bushels to the acre. On land in a high state of cultivation, the produce, after the first year, will be from two to three tons to the acre, from the first cutting, and little less from the second, if seasonable.

Seed may be had of James Bowie, Easton, from Doctor Daniel Sullivane, New-Market, and from Messrs. Loockerman and Chaplain, Cambridge, from whom agriculturists may be supplied, and a sample of the grass, with its age from the time of sowing, may be seen.

This is an upland grass, and will thrive wherever wheat, rye, oats or barley will flourish. Three or four pounds of clover seed to the acre, may be sown with the tall meadow oats; for by the time this grass comes to maturity, the clover will be on the decline. JAMES SYKES.
