In a class by itself

the pigment test tells you the house paint to use . .

SEEING is believing! We were undecided ourselves about what made good house paint until we saw the pigment test. Look at the black panel below! Note that of the six pigments used in house paint only white lead and white zinc—the pigments used in Devoe Lead and Zinc Paint—form opaque white films that completely cover and hide the surface. The others all form translucent films. That's why Devoe covers better, spreads farther, gives greater protection.
