Pontiac Six sales are now at record-breaking heights. No other low-priced quality six ever enjoyed such popularity—and no other car ever deserved its popularity more! For the New and Finer Pontiac Six is exactly the car that hundreds of thousands had hoped some day would be available!

The highest type of six-cylinder performance—the finest type of bodies known to the industry—the most desirable mechanical features.

And new low prices—the lowest prices ever placed on sixes of comparable size, performance and quality!

Small wonder that Pontiac Six popularity is sweeping the nation with wildfire speed! Small wonder that thousands of people are buying new Pontiac Sixes every week.

Farmers, List Your Repair Needs

It would be hard to find a farmer who at some time or another had not lost valuable time waiting for necessary repair parts. Take this territory and total up the time lost in this way and it will astonish you. And all because repairs are not ordered as early as they should be.

There is no better time than right now—just before the busiest season on the farm—to go over your machines carefully, make a list of repairs you are likely to need and send it to us. With this list in our hands, we can order our stock so as to be prepared t meet every call promptly.

Repair part service is a necessary part of our business. We realize what it means to you in time and money to get what you need at once. Help us to help you by making up your list now and sending it in to us.

HEALTH NOTES
SAFE AND SANE

In making your plans for the Fourth of July, have flag raisings, speeches, parades, pageants, band concerts and picnics; omit the toy pistol and anything else that gets its kick out of blank cartridges or out of equally dangerous explosives and you will have a worthwhile Independence Day. At the same time you will help to cut down the annual crop of Fourth of July accidents, burns and injuries, especially the injuries that cause lockjaw. This is the message that Dr. John S. Fulton Director of the State Department of Health asks this paper to give to the people of this community.

"Each season has its own particular problems for the health officer who aims to keep a bit ahead of the game, "Dr. Fulton said. "Lockjaw from accidents from fireworks, especially from toy pistols or from other uses of blank cartridges is associated with the Fourth of July in the mind of every health officer. There are fewer accidents from that cause than there were before the American Medical Association aided by the newspapers all over the country started the campaign for safety and sanity in the celebrations of Independence Day. But we are an easy going people, and likely to forget these things unless we are reminded of them. Hence this warning.

"Lockjaw or tetanus, to give the disease its scientific name develops from injuries or wounds in which street dirt or other solid matter is crushed into the wound. The size of the wound has nothing to do with its seriousness. Tetanus may develop from a pin scratch, or a puncture by a nail or by a splinter of wood, the agonizing stiffness of the neck and lower jaw which gives the disease the name by which it is popularly known, is caused by the poison generated in the human system in the life processes of the tetanus germ which is found everywhere wherever the soil has been cultivated. This poison or toxin, as such poisons are called, can be counteracted by an anti-toxin, known in this case as tetanus anti-toxin, provided the anti-toxin is administered promptly.

"Though lockjaw used to be associated principally with injuries from fireworks and firearms, much of the recent increase is due to the great increase in automobile accidents many of which produce injuries of the sort already described in which dirt from the roads or other solid matter is crushed into the flesh. The increase in injuries of this sort and the corresponding increase in deaths from lockjaw is indicated in the records of the State Department of Health which show a decrease in the deaths from diseases such as scarlet fever and diphtheria and an increase in those from tetnus.

"Tetanus anti-toxin for the preventive treatment of injuries likely to produce lockjaw is supplied free of charge by the State Department of Health. The larger quantities necessary for the treatment of advanced cases are furnished at cost."

DELMARVA FARM NEWS

A brief summary of the analysis of market reports compiled by the Department of Agriculture based on trading in the leading markets on June 15 follows: The wheat market was holding steady with premiums for cash grain slightly higher. Foreign markets were slightly lower, but there was a good export inquiry for new crop hard winter wheat. Weather continue to be cool for the best growing of corn crop and the market advanced about 3 cents per bushel for July delivery at Chicago. Oats market also continued firm with receipts light. Watermelons sold about $90 to $100 per car lower in New York City June 15. Good quality peaches and strawberries brought a slight premium. Onions and lettuce held about steady. Cantaloupes, tomatoes, and new potatoes sold slightly stronger; old potatoes nearly steady. Eastern Shore of Virginia. Cobblers cloth top barrels were bringing 25 cents more than those from North Carolina and Norfolk, Virginia. Strawberries from the Del-Mar-Va Peninsula were bringing 18 to 22 cents a quart.

W. M. Jardine, Secretary of Agriculture, declared on June 16 that the cooperative enterprises of farm boys and girls engaged in 4-H Club work will have its affect upon the successful conduct of future cooperative marketing associations. A few years ago it would have been difficult to find many people who would have ventured the statement that in 1927 almost 600,000 young folk would be enrolled in this work.

The fruit and vegetable crops were improved during the second week in June owing to rain. The fruit production for 1927 seems to be the smallest since 1921 it is stated in the Review of the Bureau of Agricultural Economics. Production of peaches is estimated about one-third lighter than last year. Peas production this year shows a material decrease from last year.

In the past, with our abundance of fertile acres, we have been able greatly to augment our total production through increased acreage and the use of improved machinery. With practically al our fertile land now under cultivation, except for irrigation and reclamation, further increases in total production must come from increased acre yields instead of from increased acreage," declared President Coolidge before the First International Congress on Soil Science June 13.

Increased yield per acre of food and feed crops was responsible in a large measure for the increased production of these crops in the United States during the past 40 years, a study by the Department of Agriculture reveals. The corn crop in the United States has increased per acre about 18 per cent, wheat about 7 per cent. oats 14 per cent. and potatoes about 40 per cent.

Cooperative associations marketing poultry or eggs or both have 50,000 members and do an annual business estimated at more than $40,000,000, according to statement just made by the Department of Agr culture. Eighty-two per cent of the total business credited to this type of Association is handled by organizations in the states of California, Missouri, and Washington.

The Department of Agriculture is endeavoring to enlist the interest of people in a variety of radio agricultural extension lectures covering many agricultural subjects. If you have not yet learned of the full details of these programs, write the Department of Agricuture.

A LITTLE TALK ON THRIFT

Thrift Means the conservation or most efficient use of all our possessions.

If it would be possible to translate our wasted hours into terms of dollars and cents we would be surprised at the results. The average man and woman probably wastes more value through lost time than through squandered money.

It also is to be borne in mind that wasted time often leads to wasted money, wasted health and a lowering of one's moral standards.

One of the best ways to practice thrift is to keep at work to keep doing something that is worth while and is along the lines of self advancement and self improvement.

An important educational and social betterment organization has undertaken a survey of how people spend their idle time. The object is to make recommendations which, it is hoped, will lead to the advantageous employment of leisure hours.

This movement emphasizes one of the important phases of practical thrift namely, the conservation of time. We are apt to think of thrift too much in terms of money only and too little in terms of moments and hours.

It was through the rightful employment of spare time that Lincoln acquired an education, and men like Carselves up from positions of minor importance.

Lingbergh, too has shown the value of thrift of time for it has been his custom to spend his spare hours in study and research instead of wasting them in the pursuit of idle pleasures as so often is the case with young men of his years.

Thomas Jefferson made it a rule always to keep a good book within reach and whenever he had even a few moments of square time he utilized them in helpful reading.

Every employer will tell you that if you want to build yourself up and make advencement do not become known as a time waster.

Thrift of tie is a lesson all must learn before success can be achieved.

KENNEDYVILLE

Mr. and Mrs. Harry Rasin and Miss Jefferies visited Mr. and Mrs. George Rasin the past week.

Miss Anna Caldwell and Mr. Edward Caldwell spent the week end with their parents.

Mrs. Hagger is entertaining her mother, of Baltimore.

Beauty that pays its own way

YOU can give your new home the added beauty of Creo-Dipt side-walls and roof and still save money, for even the first cost of Creo-Dipts is very low.

Or, you can re-beautify and modernize your old home by laying Creo-Dipts over old siding, for little more than the cost of two re-paintings. In 5 years, your Creo-Dipt side-walls save four coats of paint.

In either case you save money, for genuine Creo-Dipt Stained Shingles are selected red cedar, stained and preserved to require no painting or upkeep expense for years.

Ask us to show you the many attractive Creo-Dipt color schemes and quote you prices.
