A LITTLE TALK ON THRIFT

"What are the chances of success for a young person today as compared with the opportunities of a generation ago?"

This question was recently asked of this writer by a correspondent, who received the answer that never before were the opportunities for worthy success better than now.

It show be borne in mind that environment has now and always has had less to do with persoal advancement than the individual's attitude toward the problems of life. Generally speaking, one's own fate is in one's own hands. Perhaps one of the most common errors made by these who fail to make advancement lies in their lack of concentration and thoroughness.

Superficiality is but another name for thriftlessness in time and opportunity.

The problems of life are so large and complex and the range of human endeavor is so wide that individual effort, to be effective, must be limited to definite lines. The young man of today has a limitless range of opportunities before him and he can successfully fit into the scheme of progress if he will realize that there is always need for those who can do things well.

Our schools and colleges are sending their young men and young women out into the world. While they have completed their academic lessons. they still have before them those larger lessons which can be learned only in the practical school of life. In entering this new life the one practical lesson they should learn first of all is that t is better to know one thing well han to know a score of things superficially, and that it is better to be able to do one thng right than to have twenty slipshod accomplishments.

Not doing things well is no better than not doing them at all. To perform one's tasks thoroughly is a very good exemplification of thrift because it is only through this thoroughness of performance that any one can make adequate advancement.
