THE NEW YEAR

For some time we have repeatedly heard such phrases as New Deal, New Era, New Business, New Governor, new officers, new leaders and so on, that we have to stop and think what is it that isn't new. Life never holds one pattern long, it is an ever-changing design in every form of existence. What is there to do about it? At the end of each year we find ourselves unconsciously doing a lot of retrospecting, a bit of introspecting and certainly, a lot of anticipating. Hope whch springeth eternal always is the faint ray which drives us onward.

Retrospecting, rawely put, 'Water over the dam,' often does little as far as being able to do anything about it except seeing what fools perhaps we may have been, and with some introspection, trying to realize why we were said fools, but with anticipaton, the slate is clear we can start all over, begin afresh and anew. And then comes realization, how are you going to change what already is? A little determination to see the bright side that is coming and surely will shine a bit each day of the new year and the consciousness of the fact that no matter how bad things are, that the pattern which is ever changing, tho sometimes making an ugly picture will never remain the same, and with the hope that each day of 1935 a more colorful, beautiful design may be our share.

DON'T NEGLECT YOUR KIDNEYS!

If your kidneys are not working right and you suffer backache, dizziness, burning, scanty or too frequent urination, swollen feet and ankles; feel lame, stiff, "all tired out" . . . use *Doan's Pills*.

Thousands rely upon *Doan's*. They are praised the country over. Get *Doan's Pills* today. For sale by all druggists.

DOAN'S PILLS

NOTICE TO CREDITORS

NOTICE is hereby given that the undersigned has obtained from the Orphans' Court for Kent County letters of Administration on the personal estate of

JAMES H. KELLEY

late of said county, deceased. All persons having claims against said deceased's estate are hereby warned to exhibit the same, with the proper vouchers thereof, to the undersigned on or before the 29th day of June, 1935, otherwise they may by law be excluded from all benefit of said deceased's personal estate.

All persons indebted to this estate must settle at once.

Given under my hand this 27th day of December, 1934.

EDITH E. KELLEY,
Administratrix

d29.

Ice-Boring Flower From Alps Is Brought to U. S.

The blue moonwort, a beautiful spring flower from the high Swiss Alps, has the remarkable power of boring its way through a thick sheet of ice, flowering and going to seed before the ice has barely begun to melt, writes Robert Shosteck, in the Washington Post. The appearance of the crocus flowers as they push their way through the snow is ever a source of joy and wonder to the flower lover, but the ability of a plant to drill a passage to the air and sunshine through nearly a foot of ice is just short of a miracle.

In the autumn the moonwort develops thick, leathery leaves, well stocked with fuel for the coming drilling operation. These blades lie flat on the ground all through the winter until the first water from the melting snows on top trickles down and arouses the dormant roots. Internal combustion of the starchy fuel produces sufficient heat in the sprouting stalk to melt away some ice about these uprising flower stems. As the ice gives way to nature's unusual heat drill, the moonwort stem gradually pushes its way to the pure mountain air and warm rays of the sun. The opening flowers are indifferent to the below zero night temperature, since the plant is able to surround itself with a blanket of its own heat, very much as a domestic animal protects itself from the winter cold.

First Act Authorizing National Highway Plan

The first act authorizing the construction of the national highway was passed in March of 1806 and proposed a road from Cumberland, Md., only to the state of Ohio. As the public believed that the river would be more than sufficient for all transportation west, the constitutionality of expenditures for a road this side of the river was raised and debated.

When the road approached the Ohio, the friends of further extention had to sweat blood to secure an appropriation of $10,000 for locating a route for the road to the Mississippi. It was not until 1825 that congress appropriated $150,000 to build a road to Zanesville and the next year $170,000 to continue the work. Even by this time many were still vigorously opposed to so unpractical a project as a national road westward when the Ohio river could carry all the traffic.—Cleveland Plain Dealer.

Useful Orchids

Orchids are not only beautiful but they are also useful, Strand Magazine, London, says. Many of them have distinctly practical uses and several are used for medicinal purposes. "Vanilla," says the writer, Sir Jeremiah Colman, chairman of the orchid committee of the Royal Horticultural society, "is too well known to need description, yet few know it as an orchid. A Paris physician claims to have discovered that the essential oils distilled from certain orchid flowers have proved a relief in tuberculosis cases. Many flowers of less patrician quality could not claim so much practical service to mankind."

Magnetism

Faraday demonstrated in 1845 that all substances, even the gasses, are either attracted or repelled by a sufficiently powerful magnetic pole. Practically, however, the metals responsive to magnetism are the three which, with their alloys, comprise the ferromagnetic group. These are iron, nickel and cobalt. Certain other combinations of metals will respond to the magnet. Thus there was discovered in 1903 an alloy—Heusler's alloy—which is comprised of copper, aluminum and manganese, and which is said to be not greatly inferior to iron in its capacity for being magnetized.

Use of Radio Beams

Radio beams were first devised to help aviators follow a straight course in bad weather when they cannot see the ground. The "on course" radio signal or radio beam is a steady hum in the radio receiver, which breaks after a few seconds, when the call letter of the sending station is repeated in dots and dashes. Then comes the steady hum again, followed by the dots and dashes. The radio beam "off course" signal is a dot and dash, or a dash and dot, depending upon which side the pilot is off his regular course.

Genius Inherited

The fact that geniuses rarely have sons that are geniuses tends to prove that it is inherited, because all theories of human development agree that the better the environment the more likely it is to bring out any person's abilities, and a genius would be more likely than any father not a genius to furnish a stimulating environment for his son, says a writer in the Detroit News. Since many geniuses rise in poor environment and the son in question has failed to become a genius even in this exceptional environment, it indicates that the father surely did not get his genius from his environment, whether good or bad, but must have got it from his heredity, since we know of no sources of genius other than heredity and environment, or else the two combined.

Presidential Succession

It was at the instance of Vice President Hendricks' death in November, 1885, that the Presidential succession act was created in 1886. This act provided an order of succession of the cabinet officers in the event of the removal, death, resignation or disability of President and Vice President. John Sherman was president of the senate pro tem at this time. It is not likely that he would have taken the President's place. Perhaps congress would have taken some action, or one of the political parties. This situation has never arisen and there is no specific provision in the Constitution or in law to cover the point.—Cleveland Plain Dealer.

The Saar Basin

The Saar basin lies north of Lorraine, and contains about 738 square miles and 770,030 population (1926). Extensive coal fields occupy the middle of the valley between Saarlouis to the northwest and the Saar river on the west. These mines, which came into German possession with the territory after the Franco-German war, produce annually more than 7,000,000 tons of high grade coal and employ 50,000 men.

Insure Against Punishment

Most novel of insurance plans was that of two boys at Goole grammar school in England who insured fellow students against having to write lines as penalties, the charge being two cents a week and the compensation paid to students six cents a hundred lines.

The Roman Index

The Roman Index contains both the Index Librorum Prohibitorum and the Index Expurgatorius. The former contains a list of books forbidden, while the latter contains books forbidden until certain parts are omitted or amended.

Kissing in Public, Criminal

Under the Russian Soviet criminal code, kissing in public places such as in a taxi, on a train, or elsewhere is a "public obscenity" and is a punishable offense. It makes no difference if the persons doing it are married.

Home of the Dove

Doves breed chiefly in British Columbia, Saskatchewan, Manitoba, Ontario and southern Nova Scotia and throughout the United States and Mexico and locally in lower California and Guatemala; they winter in southern Oregon, southern Colorado, the Ohio valley, and from North Carolina to Panama. The dove is casual in winter in the Middle States.

Early Telephone Switchboards

The first intercommunication of telephone lines by means of a switchboard occurred at Boston in 1877. In 1878 the first commercial switchboard was installed in New Haven, Conn., with 21 subscribers.

Mix Boys' and Girls' Names

In Samoa, some girls have boys' names and some boys girls' names. If a girl is born after the death of a brother, she is given his name. If a boy is born after the death of a sister, he is given her name.

St. John's Bread

The "husks" eaten by the prodigal son in the Bible parable are identified in a Mediterranean legume with a sweet edible pulp, which is called St. John's bread, says Llewelyn Williams, botanist of the Field museum.

Assignee's Sale
—OF—
Valuable Farm.

Under and by virtue of the power of sale contained in a mortgage from John H. Clendaniel, et al, to Annie T. Hayes, dated January 26, 1909, and recorded among the Land Records for Kent County, Maryland, in Liber J. T. D. 18, Folio 366, etc., said mortgage being in default by reason of the failure of the mortgagors to pay principal, interest and taxes, was on the 17th day of December, 1934, assigned to Stephen R. Collins for foreclosure and collection. The said Stephen R. Collins, as Assignee will offer at public sale in front of the Court House Door in Chestertown, Maryland, on

MONDAY, JANUARY 14, 1935,

between the hours of 11 and 11.30 a. m.

All That Farm

located on the concrete road leading from Kennedyville to Chestervile and known as the Robert A. Cochran Farm or the John H. Clendaniel farm, containing

408 Acres
and 27 Perches

of land more or less,
being the same property conveyed to John H. Clendaniel by Nannie B. VanDyke by deed dated January 25, 1909, and recorded in Liber J. T. D. No. 18, Folio 364, etc.

This is one of the most productive farms in Kent county, well located near K nnedyville, improved by a fine dwelling and necessary outbuildings.

TERMS OF SALE:—One-third of purchase money cash on day of sale and the balance cash upon ratification of sale by the Circuit Court for Kent County, Maryland. Deferred payments to bear interest from day of sale and to be secured to the satisfaction of the undersigned. Title papers and revenue stamps at the cost of the purchaser. The purchaser to pay taxes for the year, 1935.

STEPHEN R. COLLINS,
Assignee of Mortgage

William G. Smyth, Auctioneer.

A liberal loan can be arranged on the above property.

STEPHEN R. COLLINS, Attorney

This property is sold with the consent of the mortgagors.
