SATURDAY, FEBRUARY 2, 1901

A PROMINENT Kent county Republican yesterday declared the extra session "a good thing—a move for a higher standard of citizen-ship, which should be commended by all parties."

THE SENATORIAL DEADLOCK in Delaware continues with no signs of weakening. Mr. Addicks and his friends continue to show a brave front, but many believe that they are leading a forlorn hope.

DIRECTOR OF FARMERS' INSTITUTES, W. L. Amoss, is to be congratulated upon the character and eminent fitness of the gentlemen whom he brought to Kent to address the intelligent agriculturists of the county. All the gentlemen were practical and thoroughly informed as to every detail of the subjects which they treated. Mr. Amoss will find his audiences in the county on his next visit far more satisfactory in numbers than in the past. The farmers are awakening to a recognition of a good thing.

Mr. Wing, though giving no evidences of the hardships of cowboy life on the western plains, has grown up with the great stock interests of the country. As a mere child the education which has made him one of the recognized authorities of the United States on all subjects bearing upon stock raising for profit, was commenced. He is the correspondent of the Breeder's *Gazette*, of Chicago, one of the leading papers upon stock subjects in the country. Mr. Van Alstyne's standing as an expert upon the subjects treated here, will be fully understood, when it is stated that he has been selected to take charge of the dairy tests at the Pan-American Exposition, to be held this year at Buffalo, New York.

Mr. Seidewitz as truly understands the art of being a royal good fellow as he appreciates the delicate beauty of the flowers and plants which he loves and daily tends with such signal success Mr. Amoss has shown himself to be "the right man in the right place," by the excellence of his selections of gentlemen to aid him in his institute work.

THE EXTRA SESSION.

After a deliberate and careful consideration of political conditions in Maryland, it is evident that the great masses of the representative element consider an extra session of the State Legislature a necessity. Governor Smith has displayed a dignified care in the matter, which the most bitter opponents of the extra session movement cannot fail to commend. He has given all parties and all sections an opportunity to be heard, and in considering the reasons for and against the call has shown that degree of care which its importance demands.

Of course, it was expected that republican politicians and their allies would be driven frantic by the mere suggestion of a lessening of their hold upon power, by placing the rights of franchise to a greater extent in the hands of the intelligent citizens.

With surprising effrontery they rave in fits of righteous indignation over the "political outrage," and in the same breath declare that the democratic and not the republican party will be the final loser. As expressed by Col. Jas. R. Brewer:

"They announce Governor Smith's determination for him before he has decided for himself; they have settled the constitutionality of any act which the General Assembly may, might, could, would or should adopt; they have determined the conduct of the Federal authorities in the event of any possible State legislation; they have measured the moral turpitude involved in the elimination of the ignorant, illiterate and corrupt voting elements; in fact, they have decided the whole thing in advance and have put up a game of bluff well calculated to intimidate the average politician."

The Democrats propose to contest every inch of the ground in their fight for an intelligent ballot; for relief from the blighting evil of vote-buying and for a higher standard of citizenship.

How's This.

We offer One Hundred Dollars Reward for any case of Catarrh that can not be cured by Hall's Catarrh Cure,

F. J. CHENEY & CO., Props., Toledo, O.

We the undersigned, have known F. J. Cheney for the last 15 years and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by their firm.
WEST & TRUAX, Wholesale Druggists, Toledo, O. WALDING, KINNAN & MARVIN, Wholesale Druggists, Toledo, Ohio.

Hall's Catarrh Cure is taken internally acting directly upon the blood and mucous surfaces of the system. Price 75c. per bottle. Sold by all Druggists. Testimonials free.

Hall's Family Pills are the best.

Subscription to the Transcript $1.00 per annum.

THE FARMERS' INSTITUTE.

The Most Successful Meetings Ever Held in Kent County---Many Ladies Attend at Night.

DIRECTOR AMOSS DELIGHTED WITH THE INTEREST AND ATTENDANCE.

"This is more like a farmers' institute than anything we have ever had in Kent county," said Director Amoss at the close of the meeting on Tuesday evening.

Each and every meeting was well attended by representative farmers from different sections of the county, and every expec ation of those present was met by the thoroughness and the practical way in which those who spoke treated the subject in hand.

Mr. Joseph E. Wing, of Ohio, who spoke on Alfalfa the Queen of the meadow, is a man of large experience in raising cattle and growing forage grasses. He not only knows the best cattle for beef or dairy purposes but understands the subject of soils and grasses to produce the best general results. He declared the Eastern Shore to be the "Paradise of America."

In treating the subject of Alfalfa, he stated that six tons per acre is mown in Ohio.

Alfalfa.—"When Ben Hur won his chariott race 2000 years ago, his horses had been fed on alfalfa hay." That is what wing says of alfalfa. It is evidently not a new thing.

Alfalfa needs a dry subsoil. If water stands in the soil during winter alfalfa will certainly die. It needs a rich, dry soil It must be sown alone or with beardless spring barley. The land must be deep plowed. It must be well fitted and the seed sown at the rate of 12 or 15 pounds per acre. It must be lightly covered and rolled down smooth, and sown in April or May, or in August if there is moisture enough in the soil.

The subsequent treatment consists of keeping it mown off three or four times the first season—cutting it close.

This mowing is very necessary to its success.

The second year it will yield from 3 to 8 tons per acre of hay in four cuttings.

Mr. Wing was emphatic in advising Kent county farmers to try only a few acres until perfectly well satisfied that their soil is adapted to the growth of the plant.

Alfalfa has been grown on the Rock Point farm, and three mowings per season were made. Rev. E. P. Prettyman, of Galena, and Mr. Walter T. Morris, of near Chestertown, will experiment with it this year.

Fruit—Mr. Van Alstyne's talk on fruit was interesting, in the extreme. He insisted that *merit* and not beauty alone, will govern the fruit market of the future as it has largely done in the past. The attractiveness of color and size, which have characterized the fruits of California, will not stand as against the delicious flavor of the Eastern fruit when properly harvested and sent to market. Then, too, he contended, the fruits of the East when carefully grown and handled, are scarcely less attractive to the eye than the western article. He insisted that the peach and pear orchards, the small fruit patch, and other fruit crops, should no more be abandoned to the tender mercies of nature and the elements so soon as they are planted, than should wheat, corn or other crops.

Fertility and cultivation, with especial emphasis upon the latter, were claimed as two absolute requisites to successful fruit growing. The speaker was strong in his endorsement of intelligent spraying as the most effective means of combatting the myriads of insect enemies which threaten the great horticultural interests of the country.

Mr. Van Alstyne took the position that after all these pests were in great measure an advantage rather than an injury to the fruit farmer. In the first place, he said, it places the reward of industry and intelligent effort where it properly belongs—in the hands of the observant and careful grower; and in the next place, it relieves the up-to-date fruit man of the the competition in the markets, of the fellow who relies entirely upon nature and Providence to produce the crops.

The Stereopticon.—Mr. E. E. Seidewitz, who was expected to deliver a lecture on House Plants, failed to arrive on Monday evening and Mr. Vanalstyne delighted the large number of ladies and gentlemen who had gathered to learn how to grow flowers, with an illustrated lecture on Interesting Points in New York State. The speaker is proud of the greatness of his home State to a degree only second to the love which he holds for the wild beauties of her mountains and the charms of her pastoral landscapes and the fascinating charms of her water courses. His talk was delightful, and fully compensated for any disappointments which first suggested themselves because of Mr. Seidewitz's failure to appear.

Red Clover—Mr. Wing on Tuesday took up the subject of red clover. He stated that his own State, Ohio, has had the same experience of clover failures of which Kent county farmers complain. One reason for the failure, he said, was that the fertility of the soil had suffered from long use without proper repair. Then too, he contended, that the crop is put in too carelessly. Were any other crops seeded in the same way, no returns would be expected. The seed are thrown out on unprepared ground and the elements are expected to do the rest. He advised that when the clover seed are to be sown on the wheat, a harrow be run over the ground to prepare a seed-bed, and after the seed are put out a drag or roller be put on. A roller he thought would be preferable as it would crush the clods and cover the seeds.

In his opinion the farmer could in many cases well afford to prepare the ground and sow clover seed as a crop independent of wheat or anything else Beardless spring barley he considers the most desirable "nurse-crop" for clover; use some fertilizer, follow corn, and sow about the first of April. If soil is poor, build up by seeding cow peas.

He considers timothy death to fertility and discounted its use by farmers. In response to a query as to Bromus Inermis Grass, he stated that it stands drought, grows well in poor land, is a rapid grower and keeps green late in fall. Kentucky Blue Grass he declared to be the best permanent pasture in the world. It is sown in Kentucky at the rate of one to two bushels to the acre—one-half sown in the fall and the balance in the spring. The seed sown in the fall should be rolled hard. Unless there is considerable lime in the ground blue grass might not be the best to use.

He had never known alfalfa to thrive when sown with wheat. This crop is more apt to "pull" from frost the first winter than after it gets well set.

Mr. I. R. Leaverton thought possibly our lands are "clover-sick," and needs something to help them, but did not think lime filled the requirements. Cow peas were recommended to restore the land.

The Silo.—Mr. Van Alstyne's talk on Silo and Ensilage, was peculiarly interesting. He advised any one who produces milk, either for private families or the creamery, to have a well-constructed silo. "It is the poor man's need," he said. Seventy per cent. of the value of the corn stalk is below the ear. Clover, he said, is not used with uniform success in the silo. When placed in the silo it should be a trifle wilted. Should the corn to be used become a little dry use salt with it. Corn in proper condition needs no water. Don't weight the silo, but tread down firmly as you fill in. It needs some cover to keep the air out and heat in. Sawdust is an excellent covering. The corn desired for the cows should be l ft in the fodder for the silo. He recommended the mow for clover hay.

Mr. Amoss declared that with the silo in Kent it should be the best dairy county in the State.

In reply to the question, "How many cows would an acre keep with the silo?" It was stated that there would be an average of two hundred feeding day; an average of forty pounds of ensilage per day to the cow for 200 days would make 8000 pounds or 4 tons; at an estimate of 15 tons per acre, each acre of ensilage would keep three and one-quarter cows.

Mr. VanDyke, of up the county, gave his experience with the silo, which was in every particular as set forth by Mr. Van Alstyne.

Lambs.—Mr. Wing's talk on lambs for the early market, was practical and intructive. The proper care of the sheep and a due regard to the season of the dropping of the lambs were dwelt upon. In regard to dipping sheep for scab, he considered that there was little danger of injury. He uses a dip made of coal tar—Milk Oil, made in Chicago. Does not like the tobacco dip as there is danger of its making the sheep temporarily sick. Several farmers present stated that they had used it with entire success. Mr. Wing is "Rather afraid of the Cooper dip." "Don't make your own dip," he said, "you will find a reliable, ready-made dip cheaper and more satisfactory in the end."

The Balanced Ration.—Here was a talk by Mr. Van Alstyne in which every farmer was directly interested. He endorsed no particular breeds of cattle for dairy purposes, saying that there would be found individual excellence in all breeds. A pure breed male is the one all-important point, but in cows look to individual performance rather than to long and high-sounding pedigrees. In selecting a stock bull for a dairy herd, look closely for the milk points. Study the animal and demand that in addition to his "blood" he should have the "milk points."

"Feed your cows rather than pasture your lands," was a proposition which the speaker set forth. The stock he considered will trample down and injure the pasture. No man can afford to dairy with poor cows. The milking period of a good cow should be from 10½ to 11 months out of each year.

Mr. Van Alstyne has adopted ensilage instead of raising root feeds for his dairy cows. He discouraged white turnips for dairy feeding, stating that he would not think of using them. Where used they should be fed to the cows after milking.

Here are two records which the speaker gave:

No 1—8000 lbs. milk,	515 lbs. but'r	at 20c.,	$103.00
No. 2—6000 "	276 "	"	55.20
No. 3—4600 "	191 "	"	38.20
Cost $47.50 to keep cow.			
No. 1—3720 qts. milk	at 2c,	$74.40—profit	$26.90
No. 2—2790 "	"	55.80— "	8.30
No. 3—2140 "	"	42.80—loss	4.70
Cost $47.50 to keep cow.			

Flowers.—The sessions of the institute closed with the lecture of Mr. Edwin A. Seidewitz, mayor of Annapolis, and an extensive florist with headquarters on Lexington street, Baltimore. This talk was instructive and pleasant. A large number of ladies were present and received many valuable points as to how to treat house plants in winter.

A number of queries were made and answers given relative to insect pests and how to combat them.

A Thrilling Experience.—Mr. Wing, who was for years a cowboy on the western plains and in the mountains of Utah, gave a thrilling story of adventure while tending cattle on the mesas and in the canyons of Utah. A pleasant speaker, this story of hardship and adventure was made so realistic by the narrator that the audience was held spellbound during its recital.

A STRANGER'S TRIBUTE.

One of the lecturers of the Farmer's Institute, Mr. Wing, of Ohio, has had rather unusual opportunities of observing various parts of the United States through his connection with the Breeder's *Gazette*, for which he is a traveling correspondent. Speaking of our section he says: "I am impressed with the natural advantages of your country. Your soils are certainly productive, even when measured with the standard of western soils. Your climate is far more equable than we are used to in Ohio. Your markets are better. Your railways are not to be equaled elsewhere in the United States, so far as I have observed. I own a good farm in Ohio, perhaps as good a farm as there is in the State. On it we grow some 250 tons of alfalfa hay, some 3000 bushels of corn and 1500 bushels of barley. All this we feed to stock and the stock maintains the farm. I took hold of this farm when it was not as productive as your farms. I brought it up by the keeping of stock and the careful saving of manures and the use of tide drains. Alfalfa has helped us wonderfully, but we could have succeeded without alfalfa. It would have been slower, that is all. We keep some 1000 sheep through the winter, and 200 all the year round. We keep some twenty head of cattle and ten horses. The farm contains but 250 acres. It yields us a good income. My brother takes care of things while I make my occasional trips abroad. I believe that I could take one of your farms and do the same thing. First, I would learn to grow clover. That is the foundation of all successful stock growing. I would take up the winter-fat lamb. I have sent them from our farm in Ohio to New York that averaged us $8.00 each. Those were Dorset lambs, born in January and fat as butter and only about 8 weeks old. I could do that trick here easier than at home. Then, I would take up a combination of baby-beef and dairy farming. I would select the Red-polled cattle as the best for Maryland outside the vicinity of the large cities. Red-polls are very beautiful cattle. They are good milkers, and their calves are good feeders. I would have the silo and depend largely upon soiling my cattle in summer rather than pasturing them. And of course I would have an orchard as a side issue.

I am convinced that western men could come here and do better than they are doing at home, but they would have to forget some of the things that they know and learn some lessons of your people, no doubt of that.

Your village is delightful to me. Our villages may be newer, neater, more modern, but there is here the charm of old associations, and doubtless about each old mansion there clings a halo of beloved memories. There are bits of scenery in your village and about it as fine as I have seen anywhere. An artist would find here material for many a sketch, and a romancer could doubtless spend the rest of his days weaving his many-colored threads into charming tales. I am glad that your people prize these old buildings, that you love your own country and are proud of it, that the college stands on your little hilltop, and whenever I may be I can turn back in memory to Kent county with pleasure and charm."

The Mutual Fire Insurance Company of Kent County.

The past five years' business of this company shows a saving to its policy-holders of from 38 to 40 per cent. of the premiums paid. Last year the company carried to the credit of its policy-holders more than 40 per cent. of these premiums, its total income being $11,729.00, and total expenditures for Insurance losses and expences being $6,846.00, leaving a balance of $5,383.00.

Its Cash Assets are	$10,918.99
Real Estate, Mortgages and Bonds	58,624.94
	$69,543.93
Premium Notes	191,000.00
Total Assets	$259,342.93

During the past five years the company has issued $1,000,000.00 new policies, a strong proof of the confidence of the public in it as a safe and prosperous money saving institution.

Notice to Creditors.

NOTICE is hereby given, that the subscriber has obtained from the Orphans' Court of Kent County, letters of administration upon the personal estate of

JOHN F. NEWNAM,

late of Kent county, Md., deceased.

All persons having claims against said deceased are hereby warned to exhibit the same with the proper vouchers thereof, to the undersigned on or before the 9th day of August, 1901, otherwise they may be excluded by law from all benefits of said estate. Given under my hand this 26th day of January, 1901.

ELLEN N. COMEGYS,
Administratrix.

AGENTS WANTED.

I am prepared to Furnish Estimates on

Tombstones & Monuments

at Reasonable Prices,

and will make it to your advantage to get my prices before purchasing elsewhere.

Respectfully,

W. H. Krusen,
STILL POND, MD.

Farmers of Kent County!

In a few words I wish to call your special attention to some seasonable goods which I am prepared to furnish you, and as "Self-interest rules the Nation," I am confident you have enough self-interest to call and see my goods before you buy. "A word to the wise is sufficient."

THE IMPROVED
STEEL FRAME EMPIRE DRILLS

need no comments. I carry them in the spring, Hoe and Disc Runner style. Call and examine them for yourself. The price is right. I am in a position to

REPAIR ALL MAKES OF DRILLS

if they are brought in early, but special attention given to the Empire & Bickford and Huffman.

The Perfection Chilled Plow,

which I have been selling in two and three-horse sizes, have given the best of satisfaction, and I sell them with a guarantee, so you take no risk.

The Buffalo Pitts Spring Tooth Harrow,

which is said to be the best spring tooth made, I am selling on a very close margin. I also have Peg-tooth Harrows in any size desired, made of select white oak in my own shop, and unsurpassed by any.

MY STOCK OF FIELD ROLLERS, FARM WAGONS and DEARBORNS, is complete, with prices at Rock-bottom.

SPECIAL ATTENTION TO
HORSESHOEING

by two of the most expert shoers in the county.

I will be pleased to welcome anyone, friend or stranger, and show them my stock. Come and look, it costs nothing.

Thanking my friends very kindly for their liberal patronage of the past, I am

Yours respectfully,
W. A. HYLAND, Galena, Md.
