NEW TEACHERS FOR QUEEN ANNE'S COUNTY

Queen Anne's county teaching staff in the public schools next year was practically completed this week when Superintendent T. Gordon Bennett announced the appointment of five principals and the complete corps of instructors at all Queen Anne's county High Schools. For the last six weeks the Queen Anne's County Board of Education has been engaged in an extensive campaign to get the best available teachers for next year, and they are highly pleased with the instructors obtained for both high and elementary institutions throughout the county.

Teachers at the five county high schools will be as follows:

Sudlersville High School — Anna Harrison, principal; Fannie Merrick, John S. Noble.

Church Hill High School—E. Clyde Walls, principal; Lillian Merrick, Beulah Parlett.

Centreville High School — James Williard Davis, principal; Nannie P. Keating, Ida M. Dodd, Sarah Spencer Roe, Ruth Branner, John T. Bruhel, Margaret Foard, Wm. R. McKnight, Myrtle Andrews.

Stevensville High School — Foster D. Biddle, principal; Lucille Roe, Emma Caulk.

Tri-County High School – T. Edw. Shea, principal; Mary E. Cooper, Clara B. Price, Huldah Swann, Howard Eley.

James Williard Davis, new principal of Centreville High, is a graduate of Columbia University, and has had five years successful experience as principal at Aberdeen, Harford county, Md.

Foster D. Biddle, new principal of Stevensville High, is a graduate of Columbia University, with seven years experience. For the last four years he has been principal of Liberty High School, Libertytown, Frederick county, Md.

T. Edward Shea, new principal of Tri-County High, is a graduate of Clark and Columbia University and has had seven years of High school experience.

Other new teachers in the county high schools include:

Myrtle Andrews, mathematics teacher at Centreville High, who was former principal of New Market High School, one of the largest schools in Dorchester county, and who specialized in mathematics at Columbia University.

Sarah Spencer Roe, to take charge of girls' athletics at Centreville High School. Graduate of Delaware University.

Lucille Roe, teacher of science and mathematics at Stevensville High, graduate of Delaware University.

A QUIET PRIMARY

The Salisbury Advertiser last week published an editorial that is very appropriate to conditions in Kent and we reprint sections of same hoping that candidates and supporters may learn some lesson therefrom:

The campaign of the Democratic primary candidate so far has been an unusually quiet and orderly affair. There has been no fireworks and what has been done by the candidates has been carried on in a way to cause little or no public comment.

It is to be hoped that as the campaign draws to a close that this will not be departed from and we will have one primary that will not leave behind a lot of sore places.

Talking with leading Democrats from all sections of the county has convinced us that the rank and file of of the Democratic Party is tired of fighting over nothing in primaries.

They would like to see some way worked out that would tend to do away with most of the fighting, especially when the contest is purely personal or factional.

Because a man wants to go to the legislature does not mean that he is qualified to go, nor should it mean that the voters must send him. It is often unfortunate to have men announce themselves for these positions, because their entry only keeps others who might have been persuaded of the need of their services.

Wicomico has always made a mistake in not sending back to the legislature some able man who has had previous experience at Annapolis. This year she should send a strong delegation for she will need it.

There is no occasion for a bitter fight this year and he will be ill-advised who tries to start one. The voters want peace and are about ready to fight for it if necessary.

The party wants and needs a strong ticket, strong in the sense of ability and sterling character. This should be the only influence at work among leaders and voters alike.

Monday, September 10th, was the day fixed for primary. All candidates must file their papers twenty days before this date.

TO DISTRIBUTE LIME FREE TO FARMERS

UNIVERSITY OF MARYLAND AND B. & O. RAILROAD TO RUN SPECIAL TRAIN IN AUGUST.

SOILS WILL BE TESTED

A special train, equipped with soil testing apparatus and carrying quantities of lime for free distribution to the farmers of the State, will be operated by the Baltimore and Ohio Railroad in co-operation with the University of Maryland and the United States Department of Agriculture during the week of August 20 to 25, and will be the means of emphasizing the value of lime to agriculture.

The "soil testing special" will be operated over the lines of the Baltimore and Ohio Railroad, and will make a number of stops in each of the counties through which the railroad runs. A definite schedule of stops at points in Cecil, Harford, Baltimore, Anne Arundel, Prince George's, Howard, Carroll, Frederick, Garrett, Allegany, Washington, and Montgomery counties is being arranged and will be announced so that farmers can meet the train at the nearest stopping point.

The train will be equipped with soil testing apparatus and will stop at each point long enough to test soil samples brought in by the farmers. This work will be under the direction of Dr. A. G. McCall, head of the department of soils of the University of Maryland Experiment Station. The proper amount of lime for an acre of ground as shown by the test will be given free of charge to each farmer, and will be unloaded from the supply which the train will carry.

"The soil of seventy-five out of every hundred fields in Maryland is sick for the lack of lime, and must have an application of some form of lime bearing material before maximum crops can be produced," says Dr. McCall.

"Fortunately Maryland offers a variety of lime-bearing materials, many of which are being used as a course of agricultural lime," he continues. "The finished product is usually available as (1) raw pulverized oyster shells, pulverized limestone and marl; (2) burned limestone or oyster shells; and (3) hydrated lime. To apply these different forms in chemically equivalent amounts it is necessary to make much heavier applications of the pulverized raw limestone and the hydrated lime than of the burned form. For practical purposes it is sufficient to remember that one ton of the burned lime is equivalent to one and a half tons of the hydrated form or two tons of the pulverized raw limestone or oyster shells.

"In deciding which form of lime to use the farmer must take into consideration not only the cost of the material delivered to his station, but also the cost of hauling and handling from the railroad station to the farm. Farmers living near the station will usually find it much more economical to buy the low priced raw material while those living from five to ten miles distant may find it advantageous to buy the more expensive concentrated forms.

"Farmers in the counties through which the 'soil testing special' will run are urged to have their soil tested before wheat is seeded this fall. The success of the hay crop which usually follows the wheat is particularly dependent upon the condition of the soil with respect to acidity. If on the other hand the lime requirement of the soil has been met, money should be invested in fertilizer rather than in lime.

"Samples of soil to be tested should be taken from the field that is to be seeded to mixed grasses, clover or alfalfa. A spade or shovel should be pushed into the ground and worked back and forth to open up the cut. A thin slice of soil from the top to the bottom of the hole should then be shaved off and placed on a clean piece of paper. The same operation should be repeated in another section of the field. If the field is large and uneven samples should be secured from five or six different places.

"All samples should be placed on the same piece of paper and thoroughly mixed. A half-pint of soil should be taken from this mixture, allowed to dry and placed in a clean bag or can which should be numbered and marked with the name of the owner. Around each package should be a sheet of paper giving the following information:

Name and address,
Location of the field,
Size of the field,
When last limed,
How much lime was used,
Does clover grow well.

Scenic Beauty of the Poconos

The Hall Mark of Service

DELAWARE WATER GAP—POCONO MOUNTAINS

You may have reveled in the pleasures of a vacation at the seashore—perhaps traversed the Allegany Mountains of Western Pennsylvania and marveled at their impressive grandeur but if you have never visited the Delaware Water Gap or roamed amid the scenic beauties of the famed resorts of the Pocono Mountain Region you have a rare treat in store for you.

Every mile of the journey is a vision of scenic delight. From Trenton, N. J., the Pennsylvania Railroad follows the winding course of the Delaware River, whose bosom is dotted with verdant isles and shores fringed with majestic mountains, lofty cliffs and densely wooded slopes.

The Delaware Water Gap is a colossal gorge hollowed out of the rock by the waters of the Delaware River, with Mounts Tammany and Minsie, towering as portals 1600 feet on either side. Here hotels and boarding houses provide abundant facilities for comfortable vacations for all classes.

Beyond with Stroudsburg as the gateway lie the Pocono Mountains, some 300 square miles of slopes and plateaus rising to altitudes of nearly 2000 feet, with splendid hotels, pure water dry piney, invigorating air and with such delightful spots as Mt. Pocono, Buck Hill, Tobyhanna, Cresco, Dingman's Ferry, Bushkill, Buck Hill Falls, Pocono Summit and a myraid of others of equal merit, to conjure up pleasant memories and contribute to an indescribable atmosphere of relaxation and pleasure.

A vacation in the mountains of the Pocono Region or at the Delaware Water Gap for the late summer or early autumn, amid forest, stream or lake, will prove restful, invigorating, delightful.
