"How to Pay Off Church Debts."

Why should not the local school-yard be a place of beauty instead of neglect?

Half the women of America would like to know how to make pin-money at home, and some few women actually know how to do it.

The vital question in almost every America community is that of financial aid for the church.

The *Woman's Home Companion* will pay well for every available idea or suggestion submitted on these subjects, and special prizes will be paid for the best suggestion in each class.

Particulars will be found in the April number of the *Woman's Home Companion*, which can be found on all news-stands.

Sterilizing Garden Soil.

The practice of sterilizing the soil for greenhouse or cold-frame work is coming more and more in vogue with large market gardeners. Exposure to steam heat, which raises the temperature to above 150 or 160, or even 180, degrees will kill the germs of damping-off, blights, rots, etc. W. W. Rawson says he can now grow better crops on sterilized soil under glass than outdoors. A writer in Farm and Fireside says: "We who have not the facilities for sterilizing the soil in this manner must content ourselves with changing the soil on the greenhouse benches every year, getting a new supply where we believe it to be uninfected from such disease germs."

The Odor of Cow's Milk.

A German professor has experimented to determine the effects of various foods on the odor given off by cows' milk. Some cows always give milk of strong or disagreeable flavor no matter what may be the food, which is apt to cause digestive troubles. In vain the food is changed—the flavor persists. The taste of the milk depends in a certain measure on the cow's feed, but in a degree more important on the peculiarities of the animal.

Not Likely.
