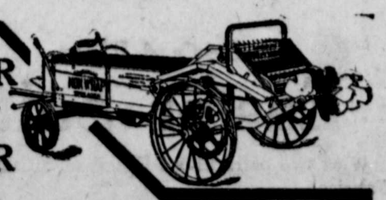
FARQUHAR "Non-Wrap" SPREADER



MAKES AN

EVEN DISTRIBUTION

of any kind or condition of Manure; therefore increases Soil Fertility and assures largest crops—

The beaters cannot wrap and must deliver the manure to the distributor in an even stream. The 16-point Distributor completes the pulverization and spreads the manure evenly over every square inch of ground.

The "Non-Wrap" Spreader appeals to the farmer's good judgment. He sees its big advantage, the labor saving and ultimate profits. Strongly built, low down and easily operated. ¶Write today for big folder giving full details of the oscillating beater arms and why they do not wrap.

Wrong Telephone Numbers Reduced

Reports Show 99 Per Cent Of Calls In 1928 Handled Without Error

She's happy in the reduction of wrong numbers.

Telephone users in Maryland, Virginia, West Virginia, and the District of Columbia made 960,000,000 local telephone calls during 1928, according to the annual reports of the Chesapeake and Potomac Telephone Company and associated companies. An interesting feature of the reports show that about 99 per cent of this enormous volume of telephone calls were handled without error and that more than 97 per cent were answered by the operator within an interval of ten seconds. If these calls had been carried on in one continuous call between two people the conversation would have lasted for more than thirty years.

The reports show that telephone officials are continuing their efforts to further improve the quality of the service. Many improvements in operating practices and equipment have resulted in further reductions during the year in the time of completing out-of-town calls.

Also, an increasing number of direct toll circuits were constructed not only between cities and towns in the territory served by the Chesapeake and Potomac Telephone system, but in connection with other Bell System companies which have been of great benefit to telephone users both in speed and accuracy in the handling of out-of-town calls.

It is also noted that the methods of plant maintenance have shown a substantial reduction in the number of troubles to telephone lines and equipment and in the average time required to correct them.

62,000,000 Miles Of Telephone Wire

More Than 92 Per Cent In Cable In United States

Dr. Bell in 1876

On March 10, 1876—just fifty-three years ago, Alexander Graham Bell, inventor of the telephone, talked to Thos. A. Watson, his assistant, on a single telephone wire less than sixty feet in length. This wire was the forerunner of the enormous network of telephone lines consisting of 62,000,000 miles of wire now serving every section of the United States.

There are now 19,200,000 telephones connected with the Bell System. Much of this telephone system is connected by cables which are practically immune to damage by storm or other natural forces. This in itself has done much to make America's telephone service one of the most dependable in the world. According to information just released by telephone officials, only about 7.5 per cent of the telephone wire in this country is in open wire lines.

Telephone Science Leads In America

American Telephone and Telegraph System Provides Service Worth Price —Forbes

B. C. Forbes, whose opinion is accepted on business and financial affairs, in writing of the activities of America's big corporations, makes this comment on the telephone system:

"We have in this country 19,000,000 telephones because American Telephone and Telegraph has succeeded, better than any other telephone system in the world, in providing service which the people consider worth the price. And of course America has left every other country far in the rear in developing the science and the practice of telephony.

"The heads and other executives of business enterprises can make money, as a rule, only by making it for all other stockholders in their concerns.

"It is the rule rather than the exception for responsible executives to invest in their own stocks. The greatest fortunes today come from dividends on stock, and there are few large companies whose stocks are not available for purchase by you and me on exactly the same terms as they can be purchased by millionaires. To get rich, managers of enterprise must become efficient servants doing things satisfactory to us, and in nearly every instance the public can participate in their money-making abilities by becoming stockholders."

KENT HEALTH NOTES

At the request of the Chestertown Firemen who are asking all local organizations for a representative to serve on the controlling board of the Kent County Ambulance, the Public Health Association, who were instrumental in raising a large amount for the ambulance, elected their president, Mrs. Nora C. Maxwell as their representative. At the regular monthly meeting which was held March 12, the executive board of the Health Association took recognition of the fact that the hospital work here has gone too far to stop and yet has become too much for the Association to handle alone. Serious consideration is being given by the board for a method of financing a modern hospital unit for Kent County which would serve this entire section. The point was brought out by one of the leading physicians of the County that the problem of efficient help in the home in cases of illness and particularly in obstetrical cases, is such a difficult one that many patients are forced to go to a hospital even though they might prefer to remain at home. In such cases it is said, a burden of expense is often put upon a family quite unable to meet it and for the patient a separation from friends and family. In cases of children these separations often require a serious readjustment in a household for the time being.

Dr. Catherine Goodson is conducting a series of classes of instruction for midwives throughout Kent County at three points, Millington, Rock Hall and Chestertown on Wednesdays and Thursdays of each week. All midwives are urged to attend. A fair percentage of Kent's prachtioners are taking advantage of this course and with the dirt roads drying up it is expected a larger number will be present at the various centers.

Outlying Districts receiving toxin-anti-toxin this week Dr. R. G. Beachley and the two nurses, Miss Margaret White and Majorie Ford are visiting the schools at Colemans, Janvier, Worton, Worton Point, Janesville, Butlertown, Melitota, East and West Georgetown and Sandy Bottom and are giving toxin-anti-toxin treatment. These schools were practically shut off for some weeks due to the impassable roads.

Miss Mabel Resley, the public health nurse of Queen Anne County has brought a number of patients to the Kent County Hospital and has others on the waiting list.

Dr. F. A. Holden, of Baltimore, and local physicians operate each week at the hospital. The cases have been limited to tonsils, adenoids and other minor operations but there is a growing demand for other work. Health authorities say that larger quarters are a necessity and the hospital committee and executive board of the Kent County Public Health Association are considering possible ways of financing a small modern hospital building which would fill the needs of the surrounding country.

The younger set of Chestertown, many of them, are experiencing the usual annual measles epidemic. Fortunately most of the cases are light but it is thought a word of caution to parents is advisable as measles, even in a light form, may be followed by more serious after effects unless care is used. The following instructions are from the Maryland State Department of Health relative to the control of communicable diseases in the State. Under the heading of Measles:

Principal Signs and Symptoms—Outset of the disease resembles a cold in the head, with fever, running nose, inflamed eyes, sneezing and coughing. The rash appears about the third day and consists of small irregular groups of dull red, slightly raised spots. They are usually first seen on the forehead and face and then rapidly spread over the entire body. Koplik's spots may be present in the mouth before the appearance of the rash.

Chief Source of Infection—Discharges sprayed or expelled from nose or throat in coughing, sneezing, spitting or even in talking.

Incubation Period—Fourteen days.

Duration of Exclusion from School: (1) Patient:—To be excluded for seven days after the appearance of the rash, provided no abnormal mucous membrane discharge is present and fever has disappeared.

(2) Exposures—Those having had the disease need not be excluded if they present a certificate certifying that they have had the disease at some time past. Those not having had the disease may return to school fourteen days after the last exposure.

On Saturday, April 6, at 1. p. m., the Ministers Wives Association will hold their annual business meeting and luncheon at St. Paul's M. E. Church, Jackson and Tenth streets.

In McCabe M. E. Church Thursday April 4th. 5:30 p. m. Professor W. M. Gilbert will speak on "The Quest For God In A World of Science." Professor George Sanville, of the Rodeheaver Company, will be the leader of song during the conference. A chorus of thirty ministers will sing at all the anniversaries. The women of the church will serve hot dinner at '2:30 and hot supper at 5:30 each day in the dining hall.

The Boys' Conference will be held in St. Paul's Church, Tenth and Jackson streets, Friday night, Saturday and Sunday.

It was reported today that two ministers being considered by the Laurel M. E. Church to succeed the Rev. E. P. Thomas, who has accepted an invitation to Smyrna are the Rev. James W. Colona, superintendent of the Wilmington District, and the Rev. W. E. Habbart, of Cambridge, Md.

The Rev. O. E. Jones, superintendent of the Middletown District, is said to be the first choice of Union Church, this day, and the Rev. W. E. Gunby, superintendent of the Dover District, is being talked of for either McCabe or Harrison Street Church, this city.

—oo—

Mike Profits, Anyway—Visitor—"Do you find it pays to keep chickens?"

Visited—"Well, no, I can't say it pays me. But it pays my son Mike."

Visitor—"How so?"

Visited—"Well, you see, I bought him the hens, I have to pay for their feed, he sells me the eggs, and he and the rest of the family eat them."

Winning Ways—Mose—"Ah wins."

Gawge—"What yo got?"

Mose—"Free aces."

Gawge—"Boy, you done lost."

Mose—"What you got?"

Gawge—"Two nines and a razor."

Mose—"You sho' wins. How come you is so lucky?" —Better Crops.

NEW—*and amazing* RCA Radiola 60

This compact table model, with powerful AC Radiotrons, is improved with a power detector tube that takes the full volume built up by the 8-tube Super-Heterodyne circuit and passes it along to the audio-amplifying circuit without distortion.

Full toned clarity of reproduction such as you have never heard!

Operates from any AC electric light socket. Price, $175.

Telephone for a free demonstration.
