NEW PERFECTION

"Cooking Never Tires Me"

"MY kitchen is comfortable and cool—there is no coal or wood to carry—and no fires to build. I use a New Perfection Oil Cook Stove."

A *New Perfection Oil Cook Stove*, the stove with the long blue chimney, gives kitchen comfort in 2,000,000 American homes.

It turns on and off like a gas stove. Its fuel cost is economy itself, 2 cents a meal for 6 people.

The long blue chimney gives a perfect draft and assures a clean odorless heat and a lasting satisfaction.

New Perfection Oil Cook Stoves are made in many styles and sizes. They are sold by most good dealers.

Look for The Long Blue Chimney

Use Aladdin Security Oil to obtain the best results in Oil Stoves, Heaters and Lamps

WHERE AXLES DIFFER

May Be Placed in Two Classes, Those Which Are "Dead" and Those "Alive."

DIFFERENCE IS VITAL ONE

When of "Fullfloating" Type All Strain and End Thrust Is Placed on Housing, Where It Belongs.

Few people understand what is meant by the terms "semifloating" and "fullfloating" as applied to rear axle construction.

Axles may be divided roughly into two classes, dead and live axles. All horse-drawn vehicles are equipped with dead axles, that is, the axles do not revolve with the wheels, but are fixed, usually being bolted directly to the springs or body, preventing rotation.

Suppose, however, that the springs be bolted to a steel tube or pipe instead of the dead axle as before. Then, if the round axle be run through this pipe and fastened to the wheel at the end so that the wheel and axle must revolve together, it is called a live axle, because it turns with the wheel. The tube or pipe in which it revolves is known as the housing.

Then, if ball bearings be placed inside the housing so that the axle turns on the bearings, it is said to be of the floating type because the axle floats in the housing. The wheel is mounted on an outside ball bearing at the end of the housing, so that it may revolve freely, and is fastened on the outer side to the axle by means of the hub plate.

The entire weight on the wheel is carried by the housing and not by the axle. The end thrust, however, as when the car is rounding a corner, must all be borne by the axle, which sometimes results in serious trouble. This is "semifloating" construction. With this type the wheel must usually be taken off in order to get the axle out.

The wheel of the "fullfloating" type is mounted on the housing so that it not only rolls around on ball bearings, but also absorbs all end thrust on ball bearings, known as thrust bearings.

This construction takes all the strain of bad roads, including both weight and end thrust, off the axle and puts it on the housing, where it should be.

Keep Tires in Alignment.

Numerous automobile tests have shown that a tire on a front wheel which is slightly out of alignment will wear off much faster than it should. In extreme cases it has been found that running a car for less than a hundred miles, with the front wheels improperly aligned, will completely wear down the tread of the best tire. Besides, such misalignment makes the car difficult to steer. The best "tire saver" for the average motorist who drives his car is to invest in one of the various devices on the market, insuring absolutely proper alignment, both as to height and to divergence from the parallel lines.

Double Treads Popular.

An eastern auto company, by its method of resoling or double-treading two worn tires into one, is meeting with even greater success than in other cities, where this particular method is used.

The idea is to make use of tires that have been worn thin, blown out or rim cut, by sewing them firmly together with a lockstitch machine, after all weak spots are re-enforced.

The results have proved excellent, and have enabled motorists to effect considerable savings.

Millions for Tires.

Granting that the average consumption of tires by motor cars is eight tires a car a year, which includes all types of vehicles, there will be required during 1915 not less than 20,000,000 tires, valued at from $300,000,000 to $400,000,000—figuring the average price of tires at $15.
