NOTICE TO Parents, Guardians and Others

WASHINGTON COLLEGE

NOTICE has been received by the Orphans' Court that Kent county is entitled to a beneficiary in Washington College, by virtue of the graduation of A. Leonard Leary, of Kent county, Maryland.

It is required that the applicant be at least 15 years of age, that he shall be able to read, write and spell well, and shall have completed English Grammar, History of Maryland and United States, Geography and Arithmetic, so as to devote himself to the collegiate course proper.

In compliance with the law, the Orphans' Court for Kent county hereby gives notice to parents, guardians and others who are disposed to avail themselves of this notice, that on

Thursday, Aug. 17th, 1916

at 10.30 o'clock A. M., applications will be received by this Court. The applicants for this position must appear in person for examination by the Court. The condition of scholarship requires the successful applicant shall give bond to the Orphans' Court in the penalty of $50.00 to teach for two years in the public schools of the State, if required to do so by the School Commissioners of Kent county.

All applications must be filed on or before the day named with the Register of Wills.

By order of the Court.

ROBERT R. HILL,
Register of Wills.

TELLS SPEED OF AUTO

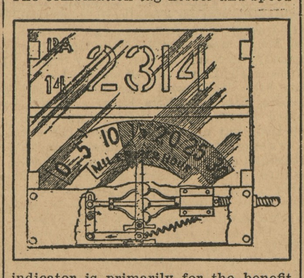
DEVICE WILL BE OF BENEFIT TO THE DRIVER.

Rate at Which Machine Is Moving Shown by Colors, and May Be Seen at a Glance.

A combination license tag holder and speed indicator for automobiles has been patented by a trio of Easton (Pa.) inventors. The device is in the form of a square board, to the top of which the license tag is attached. At the bottom of the board is a speed indicator and pointer, the different speeds being indicated by different zones in order to make it more easy to read.

Sweden A. Richards, Eben H. Van Emburgh and Clayton Zeller are the patentees. Speed of ten miles an hour and under is indicated by one color, fifteen to twenty-five miles by another, and more than thirty miles by a third hue of the indicator.

The pointer is regulated by a governor and spring, to keep it steady. The combination tag holder and speed



indicator is primarily for the benefit of city and country police officials, who may see by a glance whether the machine is running faster than the prescribed speed limits.

WOMEN DRIVERS OF AUTOS

Southern Newspaper Points Out Some Things It Would Be Well for Them to Remember.

Men, as a rule, are more confident than women. Boys are still more confident. It is not often that sheer physical strength averts accidents, or that the lack of it causes accidents. But many women, in these days of athletics, are as strong as the lads in knickerbockers who are permitted to drive automobiles.

The woman at the wheel sometimes menaces traffic because of an inbred tendency to expect way to be made for women in all circumstances. Some women drive as if they expected the provisions of traffic ordinances and the rules of the road to be reversed in their favor as a matter of courtesy, as seats are surrendered to women in street cars and in drawing rooms, or hats removed in elevators. When a woman drives an automobile without reflecting that there is sex equality under traffic ordinances, and under state road laws, and that to expect exhibitions of chivalry to the sex at crowded crossings or upon narrow country roads, is to invite tragedy, the feminine hand at the wheel courts blood. But there is no reason why women who are level-headed and conscious of the right of others should not drive automobiles. — Louisville Courier-Journal.

BRUSH PROCESS TOO SLOW

Automobile Wheels Are Now Painted by Simple Method of Being Dipped in Tanks.

Owing to the great number of wheels to be painted, the common method of applying the paint with brushes is too slow and expensive a process for an automobile factory, and this work is therefore done by dipping the wheels in tanks containing paint, says a writer in Popular Mechanics. The wheels are run by gravity down an inclined track from the storage room to a point convenient to the paint tanks. Each wheel is then picked up in turn and placed on a vertical axle in the tank, over which is a horizontal arm carrying a pin that engages one of the spokes. The axle, and with it the wheel, is lowered into the tank and immersed in the paint. The axle is then raised until the wheel is well above the paint surface, and the wheel is rotated rapidly by the horizontal bar. The surplus paint is thrown off by centrifugal force, leaving the wheel dry enough to be stored on racks at the rear of the tanks.

Improving the Roads.

Farmers as well as automobile owners in town are particularly interested in the good roads work being promoted by the national committee on prison labor. In many states prisoners are being worked on the roads. This is a good thing for the men in jail, because it gets them out in the open, and it saves taxes. Last year Montana prisoners built 119 miles of road. Warden Conley says their labor was worth three dollars a day, but they were not paid anything. He recommends that the state pay them 50 cents a day.

Must Have Motor Going.

There are several places in the working parts of an automobile motor where exact adjustments for efficiency cannot be made when the engine is cold. The conditions of activity include considerable heat, and expansion of metals must be taken into account in order to get best results.

You Women In Hot Country Kitchens

These modern conveniences have been made expressly to save ***your*** time and labor and to increase ***your*** comfort and pleasure in your daily work.

A Real Gas Cook Stove—as convenient as gas stoves used for cooking in practically every city home in the world. Like city gas it does away with the bother and work of handling coal, wood and ashes. You have a fire that is always ready—lighted instantly, and which can be controlled to give a large or small amount of heat by a turn of the valve.

A Self-Heating Flat Iron—always hot. A convenience which cuts the work of ironing day in half—enabling you to do better work in quicker time and with greater comfort. No hot stove—no roasting kitchen—the heat is all concentrated in the iron itself.

Pilot-Carbide-Outdoor Lighting and Cooking Plants

bring these conveniences to country homes. In addition they supply the house, barns and outbuildings with an abundance of safe, bright, convenient light. The ***Pilot*** is supplying this up-to-date service to hundreds of thousands of other farm homes. To secure the same conveniences for your home will require only a moderate investment well within the means of every home owner.

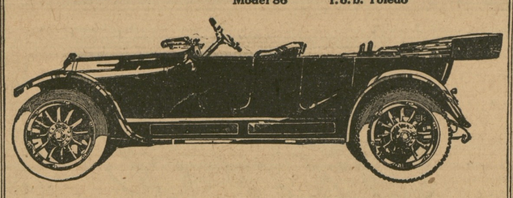
Overland TRADE MARK REG.

"Six"—$1145

Model 86 f.o.b. Toledo



The Specifications of A High-Grade Car

The specifications of the 1916 Overland "Six" are those of a thoroughly high-grade car.

Its 45-horsepower six-cylinder motor, gives it ample power.

It has that certainty of ignition provided only by high-tension magneto. The starting and lighting system is of the two-unit electric type.

Electric control buttons are located right at your hand, on the steering column—a convenience found only in very much higher-priced cars.

Brief Specifications

Seven-passenger touring
125-inch wheelbase
35x4½-inch tires; non-skid rear
45-horsepower motor
High-tension magneto ignition
Two-unit electric starter
Electrically lighted
Headlight dimmers
Electric control buttons on steering column
Full streamline body design
Genuine leather upholstery
One man top
Full-floating rear axle
Extra long, understung rear springs
Demountable rims, one extra
