Have You a Manure Pile?

If you have, get it out on your fields where it will do some good. No, not with a wagon. You waste a full third of it if you do it that way, and you have a hard, dirty, disagreeable job besides. The easy way is the paying way. Get a Low Corn King spreader that will tear the manure into small pieces, discharge its load in four to seven minutes, and spread it in an even coat over the entire surface of the ground. That's the way to use stable manure. Then you can depend upon an increase of crop yields without having to plant more acreage than you can care for. Look at the present prices of farm produce. Raise all you can. Buy and use a

Low Corn King Manure Spreader

Wheels just the right distance apart, and spread wide enough to top dress three rows of corn at once. Three sizes—small, medium and large. All narrow boxes. All steel frames with working parts of the spreader securely attached to the frame. Turns short. Drive from both rear wheels. Return apron driven by worm gear which insures even spreading up hill and down. Pull comes straight on steel frame. Solid two-inch rear axle working in roller bearings carries seventy-five per cent of the load. All-steel beater cannot warp, shrink or rot. Built up to International Harvester standards of quality in every respect.

Buy a Corn King spreader and use it. The increased yield from a few acres will pay for your spreader this year. Come in and place your order now.
