Cheese Sandwiches Are Nourishing

When we eat cream cheese sandwiches, we are seldom conscious of the fact that they are nourishing—we eat them because we like them and because they combine with so many other things into such really good sandwiches. Most people are partial to such sandwiches made on very thin bread and usually as an accompaniment to a salad or for afternoon tea—iced teas these days.

The following quantities make quite a few sandwiches but any amount can be made—by increasing the recipes.

CHEESE AND BANANA SANDWICHES

1 cup cream cheese
¼ cup cream
2 bananas
¼ cup mayonnaise
¼ cup mayonnaise

Place ice-cold bananas, sliced and covered with mayonnaise between buttered slices of white bread and spread with cream cheese softened with the cream. Or, make a pulp of the bananas and mix with the softened cheese.

CHEESE AND ONION CANDWICHES

1 cup cream cheese
¼ cup chopped Bermuda onion
Lettuce leaves
¼ cup mayonnaise

Mix the cheese with the onion. Use with mayonnaise and a crisp lettuce leaft between slices of buttered bread.

RUSSIAN SANDWICHES

½ cup cream cheese
¼ cup chopped olives
Lettuce leaves
¼ cup chopped pimentoB
¼ cup mayonnaise
Boston Brown Bread

Spread the cream cheese on thin slices of Boston brown bread. Spread an equal number of buttered slices with whpiped olives and pimentos mixed with mayonnaise dressing. Press together in pairs with a crisp lettuce leaf between.

Clean Furniture

Vacuum upholstered furniture weekly, and cleanse with a good cleaner two or three times a year.

Easton, Pioneer Utility Cuts Light Rates

Easton—Easton property owners were handed a reduction in their electric bills this month by officials of the municipal utility, one of the oldest of its kind in the country.

The new rates were five cents per kilowatt hour for the first 50 kilowatt hours, three cents for the next 550, and two cents for all consumption in excess of 600 kilowatt hours.

Industrial rates are: Primary rate, five cents per kilowatt hour; secondary rate .021 per kilowatt hour; territory rate .014 per kilowatt.

William Krumbine, superintendent of the electric plant, in a recent discussion of Easton's electric rates and electricity in general, before the Easton Rotary Club, Wednesday, said Easton had a privately-owned electric plant two years before the White House in Washington, D. C., and four years after the first electric plant was established by Thomas A. Edison in New York City. The first Easton plant, Mr. Krumbine said, was established by a private concern in 1886, two years ahead of Baltimore city.

Easton's first municipal electric plant was built in 1914-15, and began operation on March 17, 1915.

HESSION FLY WARNING ISSUED BY MCVEAN

County Agent McVean advises that the Hessian fly situation in Kent County is more serious than in a number of years, and suggests to all wheat farmers the advisability of conforming with the safe sowing date to escape the Hessian fly damage to the wheat crop to be harvested in 1946.

State and Federal Entomologists have recently completed a survey. They report a 4% infestation with exceptional cases running as high as 10% infection. In order to avoid damage, seeding of wheat should be delayed until the young maggots reach maturity. This occurs in Kent County by the 10th day of October unless the season is unusually warm. In order to prevent the maggots or larva of the Hessian fly from attacking the newly seeded wheat, Kent farmers should not seed wheat earlier than October 10th to 13th. If there are no wheat plants to serve as hosts, the wheat will be free of infection. If the wheat is infected, next spring the white maggots hatch out and feed between the wheat leaf sheaths and the stems, weakening the latter and causing the lodging of wheat with a corresponding reduction in yield. Therefore, prevention is the best method of control of this pest.

Economical Omelet To Serve Six

Economical dishes mean more today than they ever did before—not only economy in cost, but economy in ingredients. Rationed foods we use sparingly, and foods that are scarse we also try to stretch as far as possible. Eggs are one of these items. Some people have had no difficulty buying eggs, out in certain towns and hamlets—eggs are scarce—so, when four eggs can serve six—that's the dish for us.

Variations galore can be rung in on the omelet too—and just before folding it over—bits of chicken, grated cheese, cooked vegetables, jelly and so on—can be added—the results are fine.

FOUR-EGG OMELET

1 cup soft bread crumbs
1 cup milk
4 eggs, separated
Salt
Pepper
2 tablespoons fat

Add crumbs to milk and beat until smooth. Beat egg yolks; add to crumbs and milk, season with salt and pepper. Fold in stiffly beaten egg whites. Melt fat in skillet; tip pan to grease entire surface. Pour eggs into hot skillet cook lover low heat 25 to 30 minutes or until firm. Place in moderate oven (350 F.) 5 minutes to dry top. Fold over, remove to hot platter; serve at once. Serves 6.
