HOT OFF THE GRIDDLE

SUSAN SNOW

If a house is to be unoccupied for a long period, the main switch—and the homemaker should always know its location—should be shut off; if only for a short period portable lamps and appliances should be disconnected at the base plugs. Extension wires are light and, if fire risks are to be avoided, they should not be left unsupervised to store the strong electric current.

Gutters should be of copper or lead, attached with bronze or copper nails, and should be protected by strainers at the down spouts. Leaders should be of copper, or of well painted, galvanized iron, or of lead coated with copper; they should never be of tin.

Like ants, roaches are encouraged by the presence of dampness and rotting wood, also crumbs. Fill in with plaster any cracks around sinks, baseboards, or wash tubs. Sodium floride powder may be purchased in the drug store in bulk and makes a cheap way of effectively ridding the house of roaches or waterbugs. Sometimes a colony collects under a door jamb and the only way of getting rid of it is to take up the wood and literally apply a roach killer. The use of kerosene in a squirt can is very effective where the roaches appear to have entrenched themselves. Roaches are sometimes brought into the house with packages from the grocery store, therefore wipe off canned goods and other packages as they are put away to make sure they are free from these insects or their eggs.

Lard costs less than butter, a smlaler quantity is needed, blends better, but spoils more easily than butter. About four-fifths as much lard is needed as butter. For every cup of butter called for in a recipe use a cup of lard less two and one-half tablespoons and add salt unless the recipe calls for sweet butter.

When any cream soup is held on the stove, an asbestos mat should be under the pan to keep it from scorching or getting too thick. If it becomes thick more milk will have to be added. The vegetable stock for the cream soup may be prepared in the morning leaving the making of the white sauce and the assembling of the soup until later.

Estimate one pound or one quart of shrimp for three servings. Shrimp should be bought green and fresh. Wash thoroughly in cold water and clean. Run the point of the knife down the back and remove the black thread found there. Wash again and cook. Place in a large pot of boiling salted water with one-quarter of a lemon. Cook fifteen to twenty minutes. They are bright red in color when done.

When cooking a veal cutlet or round stake, if the gravy cooks away or gets too thick, add a little boiling water from time to time. With this method, the meat gets very tender and the gravy is prepared with it.

Pie pastry may be mixed, rolled into a ball, and kept wrapped in waxed paper for several days in the refrigerator, to be rolled on a floured board when ready for use. Pastry is better if allowed to stand several huors in the refrigerator before use.

Sliced tomatoes, hard-boiled egg, radishes, or olives may be used to further garnish a salad or to add to the quantity.

Fresh pineapple cut in small cubes and mixed with crushed mint leaves is very refreshing in the summer. Pineapple may be mixed with any fruit combination, but should be prepared and sugared the day before or in the early morning to soften it.

A grand dish can be made of tomatoes and mushrooms on toast. Saute the mushrooms in butter. Cut solid tomatoes in half, flour well, and fry slowly in a little butter. Takes about one-half hour to fry tomatoes. Serve on triangles of thin toast, mushrooms on one portion, tomatoes on another. Place on plate. Garnish with watercress or parsley.

As moisture draws oil out of leather and loosens the fibers shoes should never be dried in direct contact with heat. To restore oil to the uppers of shoes that have been wet, polish after they are well dried, and to soles apply a little neat's foot oil. To preserve shape, use trees when not in use, keep heels straightened, rub frequently with a good oil waterproof polish. Use neutral soap and wash patent leather and rub occasionally with vaseline. In cold weather, patent leather should be warmed to foot temperature before putting on.

Two ways to look at Good News
Way No. 1 is to examine the chart shown below. It shows the step up—based on a scientific test used by us and many of our competitors—in the anti-knock quality of Good Gulf and Gulf No-Nox. You won't need technical knowledge to see that these improvements are truly important : : : make a real difference in the performance of your car.
Way No. 2 is to actually try a tankful of *either* Good Gulf or Gulf No-Nox, as you prefer. Right away, you'll discover that Good Gulf—now boosted to its all-time high—will make your engine run more smoothly . : : more quietly.
Or you'll find that Gulf No-Nox, which even before the step up was KNOCKPROOF under all normal driving conditions, is now truly a super-fuel! No-Nox will make your modern, high-compression engine purr like never before . . . will put new life into any car! NO REGULAR GASOLINE—NOT ONE—CAN COMPARE WITH GULF NO-NOX!
