Ways to Hide Ugliness of High Foundations

High bare foundations are distinctly out of style nowadays, especially when they are conspicuous and of a lighter color than the house, but the way to cover them up or make them disappear in some way, is not so easy to find. Very often the lawn can be graded up to the top of the foundation, or almost the top. A load or two of dirt is not expensive, and can be graded up to conceal almost all the foundation around the front part of the house. It might be well to terrace it instead of merely sloping it down to the front walk. A terrace often adds a pleasant variety to the contour of a lawn; this would be practically necessary if the lawn is deep. Planting shrubs all around the house will also serve fairly effectively to conceal this broad strip. Cement foundations are perhaps the worst offenders in foundations, because the white of cement is so conspicuous. One interesting example of beautifying was recently cited: The house was of a light chocolate color, and the trimming, cream. Against the walls of the house, the white foundation was extremely ugly. The painter cleaned the surface of the concrete well, applied a coat of cement and concrete paint in a color to match the siding; when it was dry he applied a coat of lead-in-oil paint, harmonized well with the siding and the foundation disappeared from sight.

Proper Selection of Vines Most Important

There is much beauty in vines properly chosen and well placed. A little thought regarding the purpose for which each vine is planted will enable you to choose the proper one.

The vines which cling to brick and masonry have little growths along their stems which become fastened to the wall. Such vines as Boston ivy, English ivy and climbing eyonomous belong in this group. Other types of vines grown against walls must have artificial support.

Many vines have a particular value in their flowers, such as climbing roses, wisteria and clematis. These are all adaptable to lattice and trellis. Vines with a climbing habit and heavy foliage have their place in screening and completely covering large spaces. The Virginia creeper, Dutchman's pipe, clematis, bittersweet and honeysuckle are examples. They make excellent coverings for pergolas.

Sometimes it is fruiting qualities that are desired. The bittersweets, matrimony vines, climbing roses and others have attractive fruits for picking or for winter color and interest.

As important as the choice of vines, is their proper placing. Vines on houses should enhance the architecture and not obliterate it from view. The outside chimney usually seems cold and unattractive without the companionship of a vine.
