SANDY BOTTOM DEPARTMENT STORE!

AS IT LOOKS TO US.

The political developments of the week in Democratic circles have been funny—to the onlooker. The elimination of Congressman Linthicum from the Gubernatorial race, and the lining up of the Baltimore City organization behind Senator Blair Lee's candidacy, put the Honorable John Walter Smith in a good deal of a hole. While he had declared his undying allegiance to the candidacy of Comptroller Emerson C. Harrington, he did not fail to see that the new arrangement was likely to "get his goat". Hence the frantic appeal of the Smith cohorts to one Frank A. Furst, of Baltimore City. Mr. Furst was advertised as a candidate who would harmonize the warring factions—a statement of the case which befuddled nobody. Not even Mr. Furst himself. It was, of course, simply a desperate attempt of Smith's old guard to save themselves by dumping Harrington for a man they thought might run better. Mr. Furst was too wise to be caught in any such an open snare and the Smith crowd have got to fight it out with Harrington as their candidate. And it looks as if the fight would be their Waterloo. John Walter Smith has dictated the political affairs of the Democratic party in this State for a good many years. In fact, his reign has been longer than is usually allotted to tyrants; and with that thought he must now console himself. For his reign is over. Nobody knows it better than John Walter Smith himself.—Cecil Whig.

Program of Exercises for Commencement Week.

Sunday, June 6, 10.30 A. M., Baccalaureate Sermon in the M. P. Church, by Dr. Graham.

Tuesday, 8.00 P. M., in the High School Auditorium, Senior Declamation Contest for the Thomas and Russell medals.

Wednesday, 8.00 P. M., in the High School Auditorium, Class Night Exercises.

Thursday, 7.30 P. M., in the High School Auditorium, Alumni business meeting followed by luncheon at 8.00.

Friday, 8.00 P. M., in the High School Auditorium, Commencement.

10 cents admission will be charged for the Declamation Contest and for the Class Night Exercises.

The graduating class of the school is as follows:

Commercial—Cora Jones Robinson, Mary Carolene McKee, Emma Lourine Smith, Lillie May Truitt, Anne Forster Duncan, John Walmsley Davis, Roy Byron Barnett, Ralph Hines Usilton, Ernest Clifford Taylor, Isiah Tracy Davis.

Academic—Anna Marie Meeks, Richard Harrison Collins, George Watson Clendaniel, Dorothy Blanche Scotten, Louise B. Russell, Mollie Calder Copper, John Harding Collins, Albert Sydney Turner, Jr., Carrie Smith Bolton, Mary Lenora Wilkins, Martha Adrienne Skipper, Daisy Elizabeth Patrick, Lydia Naudain Comegys, John William Newton, Jr., Lee Chaplain Willis.

BIG DAY AT RADCLIFFE.

Decoration Day was a great day in Chestertown and at Radcliffee Park, where the first race matinee of the season was held. More than 1,500 people attended the races and saw the parade and base-ball game. The Greensboro band furnished excellent music for the occasion. The parade was somewhat of a disappointment as to numbers, but the quality was greatly in evidence. The prizes for best decorated automobiles were as follows:

D. B. Ford, 1st prize, $10 in gold; a beautifully decorated car.

George Rash, 2nd prize, $5 in gold, in his handsome new Dodge car, sold by A. S. Turner.

Mrs. Archie Fields, of Queen Annes, 3rd prize, $2.50 in gold, car prettily decorated with roses and other pretty flowers.

TEAMS.

Samuel DeShane, 1st prize for handsome double team, a pretty lap robe.

Mr. Joiner, 1st prize, a fine single team, lap spread.

Frank C. Miller, 2nd prize, a beautiful single team, such as Miller always drives, a fine whip.

THE RACES.

The racing was among the best ever given at the track. Of course, for so early in the season, the time was not fast, but every heat was a horse race and that is what the spectators enjoy. The day was ideal for racing, and the scene at the park, with nearly 1,600 people moving here and there and the picturesque Chester river sparkling in the distance made the scene an entrancing one. Just before the races a base-ball game was played between Chestertown and Greensboro, resulting in a victory for Chestertown after 8 innings of play by the score of 4 to 1. A decision of the umpire at the home plate "queered" the Greensboro team and they refused to finish the game.

SUMMARY OF THE RACES.

CLASS A.

Starlight B., Benj. Williams	1	1	
Lady Picknell, John F. Mallalieu	2	3	
Madge Anthony, George H. Titter	3	2	

Time—2.24½, 2.26.

CLASS B.

Rowdy Boy, Geo. T. Satterfield	2	1	1
Earl Taylor, F. C. Miller	1	2	3
The Kid, Geo. T. Satterfield	3	3	2
Lady Thompson, Wm. C. A. Thompson	4	4	dr

Time—2.21, 2.20½, 2.23.

CLASS C.

Happy Victor, John F. Mallalieu	1	1	
Chimes, Chas. K. Keithley	2	2	
Grey Nipps, Henry Hughes	3	3	
Belton H., William B. Ashley	4	4	

Time—2.30½, 2.29.

CLASS D.

Jay Bird, Leonard Price	1	2	1
Kerbash, Robert J. McWhorter	2	1	2
King B., Joseph Everett	3	3	3

Time—2.28½, 2.31, 2.25.

The officials were as follows: Starter, R. Oscar Roe; judges, W. F. Watson, Medford Roe, John Brice; timers, James Merrick, Jr., W. E. Parsons, Foster Sudler; Fred S. Russell, marshal; D. B. Kendall, clerk of the course.

SOY BEANS OR COW PEAS WHICH?

Some Advantages Of The Soy Bean Over Cow Peas as a Soil Improver.

NICKOLAS SCHMITZ,
Maryland Agricultural Experiment Station.

Since the soy bean is coming into prominence in this State many farmers are beginning to ask the question, "Is it better to grow soy beans or cow peas?"

Which is best depends upon the soil and the climate and the purpose for which the crop is grown. Soy beans can never take place of cow peas on poor, sandy soil. For this soil nothing has yet been found equal to the cow peas. On the heavier clay soils of the State soy beans are ordinarily better suited than the cow peas.

Soy beans will yield as much or more hay per acre than the cow peas, and the quality of the hay is better on account of the soy beans retaining their leaves much better than the cow peas in the curing. Soy bean hay also cures much more rapidly than cow pea hay and is damaged less by rain.

Another advantage of the soy beans is that they will yield anywhere from 10 to 35 bushels of seed per acre, which can be harvested and threshed with the same machinery and as easily as wheat. Cow pea seed will deteriorate in case it is subjected to a week or 10 days of wet weather after it has ripened, while the soy bean is not damaged under these conditions on account of shedding the water quite readily.

The place of the soy bean in the farm rotation will always be that of a fertilizing crop as well as a hay crop. On the Eastern Shore and in Southern Maryland, however, where wheat is not a paying crop and straw is not essential for bedding, the soy bean may replace wheat as a ready-money crop, the seed of the better varieties now selling for from $1.50 to $3.00 per bushel.

There are many varieties of soy beans, and in the success with the crop depends largely upon growing the varieties best adapted to local conditions. There are certain varieties, however, which will do well almost any where in this State outside of the mountain section. There are: Wilson, Medium Yellow, Sable, Haberland, Virginia, Cloud, Ebony, Peking, and Taha. These varieties are all good seed and hay producers, excepting the Peking, which is better suited to seed production and not so well to the production of hay on account of its not growing as large as the other varieties, although on good soil it will yield two tons of hay to the acre.

LIME IS WASTED WHEN IMPROPERLY APPLIED.

H. J. PATTERSON,
Maryland Agricultural College.

Considerable energy is wasted and money lost in the manner in which lime is often applied. In the first place it should be remembered that the tendency of lime is downward in the soil, so it should always be applied at the surface and never plowed under In the second place it should be remembered that the lime, when in its caustic or quick state, has the most power in producing chemical and physical changes in the soil. For this reason the aim should be to get the lime into the soil in its active state, and have it thoroughly incorporated in the soil before it has had a chance to lose any of its active principles. With this idea in mind, lime should be slacked by means of water, and, as soon as in a powdery state, should be spread over the land and at once harrowed in, to thoroughly incorporate it in the soil. Lime should not be allowed to "air" slake, as by so doing it absorbes carbonic acid from the air and is changed back to the carbonate, the form in which it existed before burning and consequently some of that which was paid for in burning is lost. Lime put on small or large piles to slake should be covered with earth to keep it out of contact with the air while slaking, and, as soon as it has come to a powdery condition, it should be spread on the land and harrowed in.

WORKING IN LIME.

It will generally be found more economical to haul water to apply to the lime and slake it out at once rather than cover with earth. Slacking with water would be a more economical method than to lose part of the value of the lime through air slaking.

Do not apply lime on top of the land with the idea that the rains will dissolve it and carry it into the soil, for, in the first place the rains may not come until after some lapse of time and much of the lime will have returned to the carbonate; and, in the second place, it takes 700 pounds of water to dissolve one pound of lime and that amount of rain could not be depended upon.

Pure Magnesium lime, which is commonly claimed to be poisonous to the soil and crop, gave the highest yield in a crop test conducted at the Maryland Experimental Station, the results of which were published in Bulletin No. 66.

A comparison of the results showed stone lime and shell lime to be of about the same value on the soil.

He Took It.

While James H. Beard, the artist, was painting a portrait of Zachary Taylor he said to him, "Well, general, I suppose you are to be our next president?"

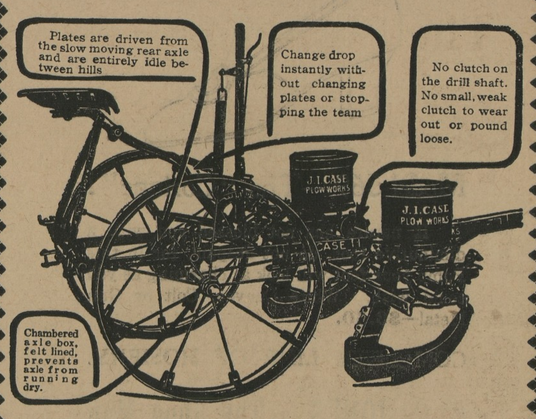
"I hope not," grunted the bluff old hero. "No military man has any business in the presidential chair, but if they offer it to me I suppose I'll be fool enough to accept it."

And he was.

Are you in "Kent County And Those Who Make It"?

"No Clutch on the Drill Shaft"

OF THE J. I. CASE PLANTER



On all Planters other than the J. I. CASE Power Drive the action of the plates is controlled by a clutch on the running drill shaft.

The clutch soon wears out and may fail to work when you need it most. Avoid this danger by buying a J. I. CASE Power Drive Planter where the parts performing the function of the drill shift clutch are found on the slow moving MAIN axle. They are made heavy and strong. Don't buy until you see this accurate and reliable planter.
