Permanent Enamel --Baked on Steel

The wearing qualities of Dodge Brothers Baked Enamel Finish have always been a source of wonder and delight to Dodge Brothers owners.

The secret of this durability, which accounts for the car's fresh, glossy appearance after years of wear, lies in the enameling process developed by Dodge Brothers when they originated the practice of enameling steel bodies, eight years ago.

After each coat of enamel the body passes into a system of electrically controlled ovens. There, under an intense heat, the enamel virtually becomes a part of the steel.

So minute is the regulation of these ovens, that baking automatically ceases the instant the proper degree of hardness is attained. Thus, the enamel is neither too soft nor too brittle, and has virtually the same expanding and contracting qualities as the steel body itself.

It is this scientific combination of hardness and elasticity which makes Dodge Brothers Baked Enamel practically impervious to climatic conditions and prolonged usage. It wears and glistens as long as the car owner gives it reasonable care.
