MILLINGTON, MARYLAND.

TO THE PUBLIC

Only Exclusive Shoe Store in Town

Seventeen Years In The Business

We take pleasure in announcing to you that our stock this season will considerably excel our most ambitious efforts in the past. In point of variety, we shall display more styles in each line than ever hereto, while in the matter of quality we shall maintain the high plane of excellence which has ever been our standard. Our prices will, as heretofore, be based on the smallest possible profit-margin consistent with legitimate business methods.

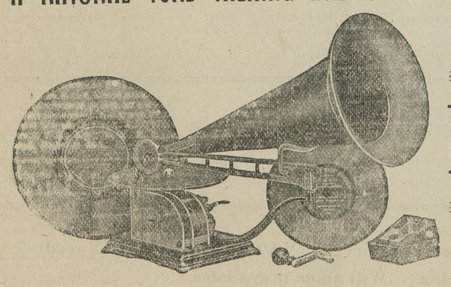
The only store in town where you can buy the celebrated W. L. Douglas Shoes for Men and Boys, and the Stout Snag-Proof Rubber Boots, the only genuine Snag Boot on the market. Best selected line of Children's School Shoes in the county. I know where to secure them. One price—all goods marked in plain figures.

Thanking you for the past favors and trusting we shall shortly have the pleasure of serving you again, we are, very respectfully, yours,

T. G. WROTH, The Shoe Man.

UNDER STAM'S HALL, CHESTERTOWN, MD.

A NATURAL TONE TALKING AND SINGING MACHINE



FREE

ABSOLUTELY. Upon the completion of a $50.00 purchase from our vast stock, whether it is Furniture, Carpets, Mattings, Mattresses, Lace Curtains, Portieres, Window Shades, Wall Papers, Paints, Leads, Linseed Oil, Window Glass of which we carry in stock about sixty sizes, Oil Cloth or Linoleum. We issue coupons, so that you don't have to purchase $50.00 worth in a day unless you want to. We have many customers who will be entitled to a machine in one day.

JOHN BARTLEY, Chestertown, Md

THE HUMAN MACHINE

MAN'S BODY AND ITS WONDERS OF MECHANICAL DEVICES.

Many of the Inventions of the Day Are Infringements on the Clever and Ingenious Devices Registered In Nature's Patent Office.

So fearfully and wonderfully is the human body made that scientists are beginning to realize that many of the inventions of the day are infringements on nature's patent office. A good deal of trouble and worry in the past could have been avoided had inventors made a careful study of the devices employed in making these human bodies of ours the useful things they are. The principles of the block and pulley or the tackle could have been discovered ages before had the files of nature's patent office been ransacked, for there are several complete pulleys in the body, notably the one which moves the eyeball inward toward the nose.

Engineers made exhaustive tests and experiments before they discovered that a hollow shaft or rod of iron or steel is about twice as strong as a solid one. Yet nature had patented this device in our bones since the birth of Adam and Eve, and every important bone is practically constructed on this principle. The ball and socket of the hip bones were the forerunners of the modern ball bearings, and it was the first automatic oiling machine used in the world. The value of air pressure and a vacuum was unknown to man until the last century, but every one of us carried the secret in the air tight hip joint which nature had assigned to lessen the muscular effort to hold our legs upright in position.

Engineers have made wonderful progress in developing compound suction and circular pumps, but all of the principles contained in them are found in the heart, and this little pumping machine is still without a rival in the mechanical world.

The principles of the safety valve for steam engines are not so new as they seem. Our human bodies carry with them the first automatic safety valves ever designed. There are upward of 2,500,000 of them. We call them by the common name of sweat glands. Each such little gland has a safety valve which lets off heat from the body when it gets beyond a safe temperature. We cannot stand a rise of more than 8 to 10 degrees of temperature and live. If therefore the 2,500,000 safety valves were closed for twenty-four hours, death would supervene.

Adam's apple was the first storage cistern ever built, and it works with automatic regularity through health and sickness. It is a most important organ of the body, although for centuries it was considered a superfluous attachment. It regulates the flow of blood between the heart and the brain. When it ceases to operate, somebody dies of apoplexy or a rush of blood to the brain. When the heart sends up too much blood to the head, the Adam's apple steps in to check the flow and store it up for future emergencies. If the heart is temporarily weakened or put out of good running order, the blood stored in this cistern is given up and sent to the brain. The perfect working of this little device is apparent when we consider how comparatively few die of rush of blood to the brain or from a deficiency of supply.

The eye has a score of small inventions worthy of recording, the ear nearly as many more and the vital organs an equal number. There is the liver with its quarantine station. Let any poisons enter our systems with food and they are immediately held up at this quarantine station and destroyed by a secret process. It is only when poisons enter in large quantities that the station cannot handle them.

But the stomach co-operates with the liver and intercepts some of the poisons. There are small machines there which manufacture minute quantities of hydrochloric acid from the salts eaten. This acid is made in exact proportion to the amount of food consumed and suffices to destroy the microbes which we swallow. But there is even a third quarantine station located in the mouth. Millions of microbes are destroyed in the mouth daily by the juices elaborated there for this very purpose. If it was not for these three quarantine stations working continuously night and day, we should be killed off by microbes within an hour after eating a meal.

In the ear there is a little device which might have been the original of our modern compressed air inventions. The delicate drum of the ear must have an equal pressure from the outside and inside to receive and transmit the sound vibrations. To make this possible the eustachian tube was devised. Its function is to regulate the air pressure inside the ear. Let it fail to work, and one becomes stone deaf.

In the bones of the head there are many little channels hollowed out which are called the semicircular canals. These canals are filled with fluid lymph. For centuries no one could understand their meaning. Some physicians considered them of no use. This tendency to belittle organs in the human body whose functions could not be explained has characterized more than one generation of savants. Now these peculiar semicircular canals are known to be wonderful little devices to assist us in keeping our balance. They act a good deal as the ballast does on a ship, or, more properly speaking, like the fluid in a spirit level. The brain keeps an eye on this spirit level and is made conscious of the body's relative position. The fluid flows back and forth in the canals, and when we get it at a dangerous angle the brain knows it.—New York Tribune.

Pipe too Strong for Mule.—Edward N Cleaves, of West Amwell had a thrilling experience in Elkton on Wednesday. He started to untie a mule belonging to Frank Corridean which was harnessed to a wagon and tied to a post in front of Samuel H. King's hardware store. Just as he got the hitching strop undone the mule made a jump and broke the bridle and knocked Mr. Cleaves down. As he fell the wagon ran over him and he got tangled in the lines. The mule ran at full speed down the street, around Queck's bakery, dragging Mr. Cleaves all the while. Finally it was stopped in front of McAllister's livery stable. Everyone who saw the occurence felt sure that Mr. Cleaves would be killed or badly injured, but it was found that the experience never even had the effect of putting out the pipe which he was smoking.

Husband No. 1 Finds His Wife the Wife of Husband No. 2.—A woman who resided in Queen Anne county during her girlhood days and later married in Philadelphia, and then two years after that separated from her city husband, returned to her native county a short time ago and settled down to spend the rest of her days in the county of her childhood. But pretty soon another lover from this county paid ardent love to her, and not knowing her to be a married woman, proposed matrimony and was accepted. The ceremony was performed and she again tried married life. Everything went along nicely for a time, until husband No. 1 learned that his wife had married again, and he then made a visit to Queen Anne's county and claimed her, and threatened bigamy proceedings if she did not return to him. Husband No. 2 asked him to return to Philadelphia and give him and his new wife time to consider the matter, and then return for his answer. At the appointed time Husband No. 1 arrived to learn their decision, and returned to Philadelphia with his wife on the afternoon train. —Record.

Condensed Statement

Showing the Condition of the

MUTUAL FIRE INSURANCE CO.

of Kent County, Md., Dec. 31, 1906.

RICHARD D. HYNSON, ATTORNEY.

Order Nisi.

Richard D. Hynson, Assignee,
vs.
Jacob T. Shallcross, Laura Shallcross.

In the Circuit Court for Kent County In Equity. No. 1604.

ORDERED, this 1st day of March, in the year 1907, by the Circuit Court for Kent county in Equity, that the sale of the mortgaged real estate mentioned in these proceedings made and reported by Richard D. Hynson, assignee of mortgage under the power contained in a mortgage from Jacob T. Shallcross and Laura Shallcross his wife, to John V. Croven, and duly assigned to the said Richard D. Hynson, dated on the 17th day of October in the year 1887, be Ratified and Confirmed, unless cause to the contrary thereof be shown on or before the 6th day of May next—provided a copy of this Order be inserted in some newspaper printed and published in Kent county, once in each of four successive weeks before the 5th day of April next.

The Report states the amount of sales to be $14,177.10.

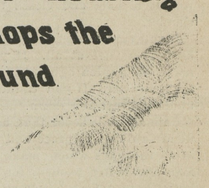
W. T. BRUBAKER, MANAGER.

Heat on Tobacco Improves it Like Roasting Improves Green Coffee. Heat Develops the Stimulating Aroma and Taste found in Schnapps Tobacco and Coffee



Three ways are used by farmers for curing and preparing their tobacco for the market; namely sun cured, air cured and flue cured. The old and cheap way is called air cured; the later discovery and improved way is called flue cured.

In flue curing the tobacco is taken from the fields and racked in barns especially built to retain heat and there subjected to a continuous high temperature, produced by the direct heat of flame heated flues, which brings out in the tobacco that stimulating taste and aroma that expert roasting develops in green coffee. These similar processes give to both tobacco and coffee the cheering and stimulating quality that popularizes their use.

The quality of tobacco depends much on the curing process and the kind of soil that produces it, as expert tests prove that this flue cured tobacco, grown in the famous Piedmont region, requires and takes less sweetening than tobacco grown in any other section of the United States and has a wholesome, stimulating, juicy, full tobacco taste that satisfies tobacco hunger. That's why chewers prefer Schnapps, because Schnapps cheers more than any other chewing tobacco, and that's why chewers of Schnapps pass the good thing along —one chewer makes other chewers, until the fact is established that there are more chewers and more pounds of tobacco chewed to the population in states where Schnapps tobacco is sold than there are in those states where Schnapps has not yet been offered to the trade.

A 10c. plug of Schnapps is more economical than a much larger 10c. plug of cheap tobacco. Sold at 50c. per pound in 5c. cuts. Strictly 10 and 15 cent plugs.
