

and one thick, fasted with four nails
with screws

the bosprit must be of six feet
in length, - it is said, four feet in side
and two feet out - eight inches broad
square - the pulley must be of two
and half inches thick and eight broad
the capstan must be of five feet
in length and ten inches diameter.

the spring of the bar must be of
1.5 feet in length - two inches broad
tapered to one inch - three quarter
of an inch thick tapered to half
inch - and a ring to the end of it
of three quarter of an inch thick.

the hook must be of eighteen
inches long two and half broad
and one inch thick -

the rest of the iron work, except
the chain and pin may be suppressed.
