1837-1838 Caspar Morris [redacted] medical notes 1999

Nov. 16th 1837 –

Secondary Effects of Remedies – Not a change produced by immediate operation but dependent on laws of System which determine a change to occur in advance of the primary

1. Abnormal following excitement wherever the body or any part has been stimulated deep pain follows when the stimulant is withdrawn – as nervous of morbid cure by the continuance of Alcoholic stimulation – this can not be resorted to as a remedial measure

2. Sympathetic action from local inflammation such as Phlegmasia, Rheumy, Pentonitis &c. Fever the secondary effect. Same head Cerebral sympathy by which inflammation follows absorbents from local disease to distant organs.

3d Diminution or removal of local inflammation by Revulsion – a law of System that by exciting disease of one part of the system you may relieve disease in another part: hence revulsives are used: 4th Expulsion of dis. action from the course of Cause – these diseases are secondary owing to local disease as headache from constipation 5th Efforts made by nature to repair the effects of medicines on tissues &c. Modes of administration:

Form – Solid powder pills troches Electuaries Confections: Liquid Solutions & Mixtures

Powders. nothing should be given in this form are deliquescent or which become so by being mixed together: Many Chrysalized substances by being powdered & mixed become thus hydrated as acid of lead & tartar
