At Antwerp.

Ship Silence, King, of New-York, Penman, Coffin, of do.

At Bremen.

Ship George Barclay, Rogers, of N. York
Columbia, Homan, of Boston.

PHILADELPHIA, October 18.

Extract of a letter from an officer on board the United States frigate Philadelphia, dated Gibraltar, August 25, 1803.

"We arrived here this day after a pleasant passage of 27 days. None of our frigates are here; we are informed they are off Tripoly—we shall sail to join them in a day or two—we are all much pleased with captain Bainbridge. The Ambuscade that formerly had an engagement with the Boston, was sent in here a few days since by a British frigate. We hear that captain Rogers has sunk one of the fastest sailing cruizers belonging to the Tripolians."

A letter received in town yesterday from an officer on board the frigate Philadelphia, mentions her arrival at Gibraltar, after a passage of 27 days; and that accounts had been received at that place of the John Adams having captured one, and sunk another of the best Tripolitan cruizers.

CITY HOSPITAL REPORT,
October 17, 1803.

Admitted the last 24 hours, ending this morning at 8 o'clock: None.

Died since last report,
Margaret Johnson.

Discharged—cured—none.

Remaining in the Hospital, 13—of whom 5 are convalescent.

JOHN SYNG DORSEY,
Resident Physician.

Interred in the public ground, since last report:
A woman from the city hospital,
A man from the Northern Liberties,
A woman from the Alms house,
A woman from Shippen-street,
A child from the city.
A black child from do.

SAMUEL GOODMAN, Steward.

HEALTH-OFFICE,
Philadelphia, October 17.

Thirty-three physicians report *no new cases* of malignant fever during the last 48 hours, ending this morning; one suspicious case however has been reported from the Northern liberties, and one of five days illness, in Union-street. Should the state of the city continue favorable, the board of health deem it sufficient to publish only the daily bills of mortallity.

By order of the Board,
WILLIAM T. DONALDSON,
President.

FELIX PASCALIS, *Sec'y.*

CHARLESTON, October 8.

The sch'r America, capt. Johnston, arrived this morning, left Jamaica 36 days since, bound to Philadelphia. On Sunday last, in lat. 33, long. 76, during a gale, and while lying to under reefed foresail, was struck on the starboard quarter by a heavy sea, which threw the vessel on her beam ends, washed the captain and one man overboard—the latter was drowned, but the former fortunately caught the boom tackle fall, while under water, and saved himself. The boat chocks, bulk head, companion, binnacle, and every other article on deck, except the boat, was swept off; and her quarter boards on both sides carried away. On finding themselves in that situation, they immediately up helm, and with difficulty got her before the wind, a most tremendous sea running, and the vessel a mere wreck, expected every moment to founder, the sea washing all over the deck, and a great quantity of water in her hold.

A few days previous to capt. Hughes' sailing from St. Thomas, a French privateer of 10 guns, carried in a British privateer of 8, after a smart action.

ALEXANDRIA, October 18.

HEALTH-OFFICE, *October* 18.

The committee of health report five deaths, for the 24 hours ending this morning at 10 o'clock.

They acknowledge, with gratitude, the receipt of *three hundred and twenty-nine dollars* from the gentlemen of Fredericksburg and its vicinity, and *ten dollars* from Mr. Robert Abercrombie, as donations for the use of the *poor*.

S. SNOWDEN, *Sec'y.*

Died at Suffield, county of Trumbull, and state of Ohio, on the 25th June last, of the small-pox, Mr. Orestes Hale, son of Samuel Hale, esquire, of Suffield, (Con.) aged 23. The death of this amiable young man was attended with circumstances peculiarly distressing to his friends, and interesting to the cause of humanity. In April, 1802, esq. Hale and his family, (excepting the deceased, who was then absent) had the kine-pock, under the care of Doctor Alder—unfortunately from a want of confidence in "the cow-pock, as an effectual preventive of the small-pox," this young man never had it.

Being proprietor of a considerable tract of land in that country, esq. Hale went to Ohio, in May last, accompanied by his son, whom he fondly expected would settle there. At Shippensburg, in Pennsylvania, the young man was exposed and took the small-pox; on the 10th of June, the symptoms appearing, esq. Hale, was inoculated for the small-pox, and attended his son until he died, on the 24th; but the small-pox had *no power over him*; the cow-pock shielded him from the effects of that terrible disease, which proved fatal to his son. We apprehend giving publicity to this disease will render an essential service to the community, by exciting more attention to a subject, in which not individuals alone, but society are deeply interested.

[*Hartford paper.*]

From BRYDEN'S *MARINE LIST.*
October 18.

Arrived, ship Phœnix, Hancock, 36 days from Bristol—goods—J. P. Smith and others. Left ships Cornelia, Bliss, of Philadelphia, to sail in 15 days; Sally, Maddock, New-York; Sally, Topsom, do. Lewis, Orr, Boston; Bristol Trader, Phelps, New-York; Paragon, Wooden, Norfolk, uncertain; Lewis Williams, Butler, Philadelphia. Just arrived, brig ——, Addington, Norfolk; and captain Bryan, of New-York, (vessel's name unknown) detained by a British privateer.

The Phœnix, brings papers to the 6th September, but their contents are quite uninteresting.

The English frigate ashore on Cape-Hatteras, is the Andromache, not the Boston, as stated yesterday.

October 19.

Arrived sch'r Plato, capt. Gemmill, 24 days from Kingston—ballast—the captain. Left there the sch'r Patriot, capt. Weatherfly, of Vienna, for Baltimore, in 10 days; ship Amelia, Palmer, of do. for N. York, next day; Sally, M'Fee, of Philadelphia, do. brig Lydia, Chappell, of New-London, do.

The sch'r Milford, capt. M'Namara, sailed the day before the Plato, for Alexandria.

The brig Betsy, Chatfield, sailed from Kingston ten days before the Plato for Baltimore. Spoke nothing.

Arrived, sch'r David, capt. L'Hommidieu, 11 days from New-York—salt—Levering and Nelms.

Arrived, sch'r Dorchester, capt. White, 19 days from Martinique—sugar—Benjamin Lenthieum. The sch'r Eagle, capt Griffin, sailed for St. Thomas with the Dorchester.

Arrived, schooner Evelina, capt. John Chipman, 46 days from Bordeaux—wine—the captain. Left there, ship ——, Jacobs, of Philadelphia; and brig Aurora, ——, of Charleston. September 3d, in sight of the light-house, spoke the brig Sarah, Bootman, of Philadelphia, from Lisbon, bound to Bordeaux.

Arrived, sch'r Hope, capt. Geer, 12 days from New-York—salt & merchandize—Isaac M'Kim and others.

A ship and brig are in the bay.

C. W. PEALE TO THE PUBLIC.

Every invention that saves labor and time merits the attention and approbation of the inhabitants of America; every conveniency that renders life more comfortable, and those particularly, that can have the least tendency to make men better, is deserving of a bountiful reward bestowed on the inventor. Yet alas! how few men of inventive genius meet with the encouragement their talents entitle them to! However, this shall not be my fault, if it is not otherwise in the case I am now about to treat on.

Viewing a happy contrivance of the ingenious Mr. John J. Hawkins for multiplying copies of writing, or making several originals at the same time, the utility of it was so apparent that I instantly urged him to get a patent for his invention, which he has since obtained, and among other of his patent rights he designates this under the name of Polygraph.

Although I have but little time to spare from the labors of the museum, yet my desire to promote the manufactory of an invention which promises to become so generally useful, prompts me to superintend a work of machinery to perform several similar movements, which I know must be executed with great accuracy, otherwise the best of inventions might be destroyed or lost to the public; wherefore I have neither spared labor nor expence to *simplify the machinery*—the having it *made durable—nor easily deranged or put out of order*, and capable of being understood, and used, by any person on the first sight of it.

The polygraph may be made to write with five or more pens, by the government of any one of them with equal facility as can be done with a single pen, and very little restraint on the fingers of the performer, but machines, with two and three pens will probably be most in use.

How often do we find families in distress to know the circumstances as they have occurred in the estates of those departed? The widow and the orphan too frequently suffer losses, which might be prevented by having recourse to transactions, which are very generally detailed in some manner by a correspondence with friends.

Ladies (if your fortunes can spare the expence of 50 or 60 dollars*) urge your husbands to purchase, and use the polygraphs; but let none come to "rob me of my precious time," through curiosity.

And as I cannot spare the necessary time for keeping accounts, and wish the mechanics who make the polygraphs to be paid their money as they earn it, therefore I hope it will not be thought hard, that in every instance I do exact payment from the purchaser before delivery—as by such procedure all can be well served.

The price of those with two pens, with convenient apparatus for letter writing, is 50 *dollars*, and those to write with three pens 60 *dollars*.

N. B. No machine will be suffered to go abroad before it has been proved and found to perform well.

Museum, Philadelphia, October 3.

* *Neat mahogany portable Polygraph cases may now be had at the Museum.*

FOR THE FEDERAL GAZETTE.

Messrs. Tundt & Brown.

IN reading your paper of Monday last, I observed a piece signed "Harmony," and addressed as a caution to persons petitioning the legislature for a new market-house in the western or north-western precincts. The author does not here pretend to possess any other knowledge respecting the business than mere private information. May we not then suppose that Harmony may preside at times in all classes of citizens, and that at this time it has found its way into one of those little parties, Harmony alludes to; for certainly it was not from a respectable source he received his information, or never would he have had the effrontery to state that the word north or northern was by design omitted, by the person who formed the petition; and, in order to give Harmony an opportunity to apologize for his demerit, I will inform him, that that petition was formed and drawn upon principles friendly and honorable, by a gentleman who is above little arts or little parties, (as he is pleased to stile them) and stands too high in the estimation of his fellow citizens to be affected by such dark insinuations; and I have charity to believe had Harmony been possessed of correct information he would not have made the charge—And again, he says that the omission was not observed by the most observant, until the loquacity of a confident let the secret transpire, and that this discovery has given rise to party, which is another impropriety; and as all his latter charges, as well as the former, are without foundation, I shall not at this time animadvert upon them; and as I have no desire for controversy, I would seriously and friendly point him to his own signature, and leave him, for the present, to his own reflections, which, to have the desired effect, is the wish of *A Friend to Harmony.*

October 18.

From the Monthly Magazine.

SPANISH SALAMANDER.

Paris has for some days rung with a relation of the wonderful exploits of a Spaniard in that city, who is endowed with qualities by which he resists the action of very high degrees of heat, as well as the influence of the strong chemical re-agents. Many histories of the trials to which he has been submitted before a commission of the institute and medical school, have appeared in the public papers; but the public wait with impatience for the report to be made in the name of the commission by Professor Pinel.

Until this report, which will contain a variety of details on the mode of conducting the experiments, be made known, your correspondent sends some of the more remarkable circumstances, of which he has been himself a witness.

The subject of these trials is a young man, a native of Toledo in Spain, 23 years of age, and free of any apparent peculiarities which can announce any thing remarkable in the organization of the skin; after examination, one would rather be disposed to conclude a peculiar softness than that any hardness or thickness of the cuticle existed, either naturally or from mechanical causes. Nor was there any circumstance to indicate that the person had been previously rubbed with any matter capable of resisting the operation of the agent with which he was brought in contact.

This man bathed for the space of six minutes, and without any injury either to his sensibility or the surface of the skin, his legs in oil, heated 970 of Reaumur (250 1 4 degrees of Fahrenheit;*) and with the same oil, at the same degree of heat, he washed his face and superior extremities. He held for the same space of time, and with as little inconvenience, his legs in a solution of muriate of soda, heated to 102 of the same scale, (261 1 2 Fah.) He stood on and rubbed the soles of his feet with a bar of iron heated to a white heat, in this state he held the iron in his hands and rubbed the surface of his tongue.

He gargled his mouth with concentrated sulphuric and nitric acids, without the smallest injury or discoloration; the nitrous acid changed the cuticle to a yellow color; with the acids in this state he rubbed his hands and arms. All these experiments were continued long enough to prove their inefficiency to produce any impression. It is said on unquestionable authority that he remained a considerable time in an oven heated to 65 or 70 degrees, (178—189 Fahr.) and from which he was with difficulty induced to retire, so comfortable did he feel that high temperature.

It may be proper to remark, that this man seems totally uninfluenced by any motive to mislead, and, it is said, he has refused flattering offers from several religious secretaries of turning to emolument his singular qualities; yet on the whole it seems to be the opinion of most philosophic men that this person must possess some matter which counteracts the operation of these agents. To suppose that nature has organized him differently, would be unphilosophic: by habit he might have blunted his sensibility against those impressions that create pain under ordinary circumstances; but how to explain the power by which he resists the action of those agents which are known to have the strongest affinity for animal matter, is a circumstance difficult to comprehend. It has not failed, however, to excite the wonder of the ignorant, and the enquiry of the learned at Paris. J. E.

* *As the method of converting the degrees on Reaumur's thermometer to those on Fahrenheit is not generally known, we insert the rule; multiply the number on Reaumur by* $2\frac{1}{4}$, *and add* 32 *to the product. The heat of boiling water is* 212 *degrees of Fahrenheit.*

From a Paris paper.

A CURIOSITY.

The fire-proof Spaniard, of whom so much has been lately said at Paris, has been an object of the public curiosity at Madrid. The Madrid Gazette for the 29th July, contains several circumstances relative to this man, which proves that he has not escaped from a convent, as some have conjectured. His name is Faustino Chacou, and he was born at Toledo in one thousand seven hundred and eighty.—"This man," says the Madrid Gazette, was at Estremadura in extreme poverty, at the age of 12 years, and recollecting that his mother had often told him, that when he was very young, he had fallen into the fire without the least injury, he thought of this experiment to get a livelihood. In fact, he exposed himself to the action of fire, without inconvenience, and making further experiments, he ventured at last to enter into a baker's oven. From Estremadura he went to Zerez, and from thence to Cadiz. He was there at the last bombardment of the English. He saved from the midst of the fire, many persons who were in a house in flames. At Cadiz, Mr. Robinson heard of him, and wished to see him; and though the young man never used his secret but from necessity, he was prevailed upon to follow Mr. Robinson to Madrid and to Paris. He was at Madrid in June last. The Spaniard has submitted to the same proofs at Paris, at Madrid, and has had the same success. The only effect which fire can have upon him, is, as he declares, that it gives him a kind of cramp, the degree of which lessens upon the frequent use of his extraordinary faculty, as disuse increases it. He is a man without education, and does not know how to read."

Susquehanna Canal.

The Proprietors of the Susquehanna Canal will please to take notice, that their semi-annual meeting will be held at Bryden's Inn, in the City of Baltimore, on Monday, the 24th day of October instant, at 12 o'clock, at which time and place a punctual attendance is requested in person or by proxy.
