To President Members of
Queen Anne Agricultural Society

At a regular meeting of the Society held held at Poplar Grove on Wednesday June 7th 71
We the undersigned Committee, made inspection of Mr. J. R. Imoy's farming and be leave to make following Report.
His Corn fields were in excellent condition and thoroughly cultivated.
His implements in very nice order and under substantial shelter, all of which seem to be of an improved pattern, with the exception of his Wagons, which seem to be the same pattern that were invented by C Harry in 1837, and must have been long ago worn out Was it it not for the good care taken of them, which substantiates the opinion of some good farmers, that more farm imple are allowed to rot down by exposure to weather than are worn out in cultiv of crops
We must also give him great credit for being far a head of any member of the Club or of any farmer in the County in his very superior herd of Short Horns which seem to have been bred with great care and judgement. His Milch Cows were in fine order, his Calves fat, and his white Bull a noble animal. and from hope that his growing lambs we hope may lead others of the Society to follow his example, and do away with the miserable Lodge field stock that now encumber our pastures and stock yards. His Horses we in fine order particular the very fine pair of Brown Mares, ~~up~~ headed and in high livery showing well the care that is taken of them. Also a very superior suckling we were shown is entitled to our notice as well a yearling which promises to be fine
His dry Cattle and Work Steers we were not shown, but have no doubt were in keeping
