Dear Sir:

Referring to your letter of the 18th in regard to the scale of our profiles

I believe the chief difficulty in using the scale you suggest would be that our profiles would not be handy to use with the topo. maps. It is not convenient in studying a land to have the profile the same scale as the contour maps. If you want to reduce the width of the profile why not make it 10' vert 400' horz? We have done our profile to standard scale 20' vert 400' horz. We can easily make a profile for filing on tracing paper scale 40 vert 600 horz if you desire.

Yours truly
Lloyd T. Evans.
