there work to concentrate on making the transit party see the ground!

In regard to dropping an instrument man the leader want to complete his tie in as he is familiar with his instrument and work. If I send Bill on I will not have any body to take the notes and topography to give us the proper contour of the curves, drainage & land ties.

We still have from 8 to 10" of snow all the way up thru the gap, and to cover the land as we have planned it will take a full party long hours and Sunday work to get along with it. Everything is all fine at Otto since we complete the work there yesterday

Yours truly
Chas J Evans
