(4) (Image Mains Digest)

a dyke on Fault Zone running parallel to the Middle Indian Indge + across the available in the Agno. It girt has been opened with a cliff-line width of 25 ft. This is charming N.E. along a course out to the N.E. side of the Bambli (see photographs nos 1 + 2) Started arms on in the side down of this cut, but if the photograph the Zone appears as this photographed the dyke are not reflected along the direction of the fault so the operations would not have gained all this girt unless when it was to come in Photo No 1.

Starting along the fault in the other direction the end of the exposure is clearly shown in Photo No 4. The exposure extends it about the top of the ridge and then turned to the Zone left, but if the photographs the Zone are not reflected along the direction of the fault so the operations would not have gained all this girt unless when it was to come in Photo No 1.

Starting along the fault in the other direction the end of the exposure is clearly shown in Photo No 4. The exposure extends it about the top of the ridge and then turned to the left but if the Zone direction

- 200 ft - in the Zone direction
