used a heavier
spoke than the one you have but we shall
procure some for your special use. They are
made to our special order, that is all the spokes
we use. And as soon as we can have the heavier
made we will send you new pair of wheels. Or
if we can find them in the market we
will get you up a heavier wheel. We have
never made a sulky the weight you propose
save one which we dare not offer to race drivers
because the material is not up to the quality
which we require. As a test of strength have
a number of men get onto the sulky at one time
One, in the seat one at each side, good heavy fellows
just move on if you can find room for them.
You have in that, a sulky capable of carrying 750 lbs. Perhaps
after giving it this test you will think better of its
carrying capacity. We have read your other letter and
do not see any preference for 35 lb sulky. We
furnished you our catalogue showing weights &c
The stuff in the lining of our sulkies is of German
made and the same stuff of which the barrels
of army rifles are made. We want you satisfied
and pleased and we want to know besides that
your horses are capable of going faster to the new
sulky by many seconds than they could go
