
"For plastic mixes using sound aggregates, the strength and other desirable properties of concrete under given job conditions are governed by the net quantity of mixing water per sack of cement."

Strength—

Durability—

Watertightness—

PREDETERMINED!

By careful observance of the water-cement ratio, concrete of any required characteristics may be made easily and economically.

The booklet "Design and Control of Concrete Mixtures," tells the procedure to be followed. Selection of materials, estimating of quantities, importance of curing, and control of concrete making in the field are plainly discussed.
