Windsor Vt. Jan. 9th 1837.

Rev. Ira. A Easter

Dr. Sir

Your communication of the 3rd inst. was duly received, and at once relieved me from the doubts I had entertained for some time, as to the fate of my letter to Dr. Hall of the 4th Nov. last. In reply I have to say that I shall be happy to see Mr Mc Gill at any time, and hold myself ready to do for him all that lies in my power I can give him a room in my own house, which if he chooses he can also lodge and also the use of text books and anatomical apparatus

Shall require of him daily recitations and also that he submit himself to the course of study prescribed by the Medical College of the Univ. of Vermont. which differs essentially from the course pursued in other medical schools, ~~inasmuch~~ inasmuch as it is progressive - the different branches of the science being taught in a definite order, and the students not allowed to pass from one branch to another until he has mastered the preceding. The course alluded to occupies four years - the first being devoted to Logic, & Mathematics and the Physical sciences, including also Natural History The second Anatomy and its collateral branches. The third is devoted to the study of ~~Disease and~~ the history, nature, and treatment of diseases purely medical. The last year is occupied with Surgery and Medical Philosophy. Some considerable knowledge of the Greek and Latin Languages
