Olin Davis' Herd Leads.—The average production for May of the 369 cows in the Middletown Cow Testing Association was 670 pounds of milk and 23.5 pounds of butter fat, according to the monthly report of the cow tester, C. E. Cromis.

Thirty-seven cows made above 1,200 pounds of milk or 40 pounds of fat. The highest average herd is owned by Olin Davis. His herd of seven cows averaged 1,319 pounds of milk and 46.5 pounds of fat for the month. This record was made on crimson clover pasture and 2 pounds of dairy feed per day.

The record of the highest cow for the month, owned by C. F. Meyers, was made on rye pasture with the addition of a balanced grain mixture. This is regarded as an excellent example of the advantage of sowing some fast growing forage crop for early spring and midsummer pasture.

The fact that several members have cows on the quality list shows that the interest in the association is widespread and that the highest producing cows are not limited to [illegible] two members.

Several members of the [illegible]iation are having their herds tub[illegible] tested under Federal govern[illegible] supervision.
