MOST MARYLAND SOILS ARE IMPROVED BY LIME

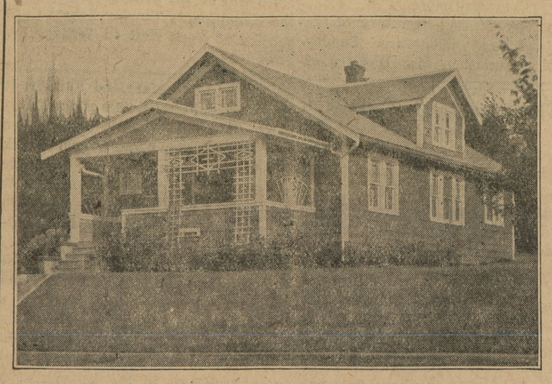
Practically eight per cent of Maryland soils are strongly acid an drequire lime for the best production of legume crops, say soil specialists at the University of Maryland.

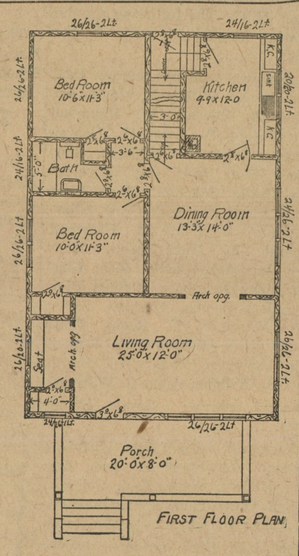
So far as benefical results on crops are concerned, it makes no difference in what form lime is applied. Finely pulverized limestone rock is the carbonate form of lime to which form all kinds of lime applied to soils will return. Burnt lime and hydrated lime may prove more economical to use under some conditions than the pulverized limestone. Chemically, 56 pounds of burnt lime and 74 pounds of hydrated lime are equivalent to one hundred pounds of the pulverized limestone.

Lime should be worked into the surface of the soil three or four inches for the best results. It is the contact of lime with soil particles that is important in correcting acid conditions. The fineness to which limestone is ground thus has a bearing on its value. Lime should be applied just previous to seeding and preferably before the legume crop in the rotation.

For the economical application of lime a soil test should be made. Soils will be tested by the county agents or by Soils Department of the University of Maryland without charge. Lime applied in too small amounts will not produce the desired results while over application is uneconomical.

George I. Harrison, of Crumpton, was sworn in this week as Supervisor of Assessments for Queen Anne's County.





Your Home

Reflects your Individuality

Let us help you plan to use the most convenient built-in featues, economical and aattractive materials.

It is our purpose to know something about the many new building products which are constantly being introduced.

YOU cannot afford to build without giving careful consideration to the many "up to the minute" helps we can render.

New plan book "Popular House Plans," will be sent free, if you are planning to build.—Ask for it.

KNOCK out that "knock"

WITH HEARN ETHYL GASOLINE AND MAKE THAT "KNOCK A BOOST"

EVERY hour of every day more car owners are stopping the "knock" in their motors and turning the carbon deposits—the cause of "knocking"—into a source of benefit by filling their tank with Ethyl Gasoline.

Hearn Ethyl Gasoline is our regular Hearn Gasoline plus Ethyl Brand of Anti-knock compound, the ingredient developed by the General Motors Research Laboratories.

The first tankful will stop all "knocking"—that hurts your ears and hurts your motor. In addition Ethyl Gasoline will transform the carbon in your cylinders into an agency of service, giving you more power, faster pick-up and less need to shift gears.

Stop at the nearest Hearn Ethyl Station and fill your tank with this fuel.
