DUCKING SHORES NOW ACTIVE

Owners of ducking lodges from Wilmington, Baltimore and Philadelphia have been spending the week-end at the shores putting on the finishing touches to the duck blinds which line the shores of the Chesapeake Bay, Sassafras, and Chester rivers from Georgetown to Chestertown. There has been more activity at all of the lodges during the week than for several years. Blinds which were carried away by winds and high tides during the summer have been rebuilt feeding grounds are being baited with thousands of bushels of grain, while both live and artifical decoys for both ducks and geese are arriving at the lodges by the hundred. At "Napley," the estate of Eugene duPont, on Grey's Inn Creek, special blinds have been erected for the convenience of Mrs. duPont, who is an expect shot, while just across the river at the Pioneer Point estate of Mr. and Mrs. John J. Raskob, special preparations have been made for the pleasure of Mrs. Raskob who is regarded as one of the best shots on Chester river. The season will open on Monday, November 3, and in Kent county only two days each week will be allowed for gunning except during the last week of the season when shooting will be permitted every day except Sunday. There is scarcely a desirable gunning location on the bay or rivers that is not controlled by sportsmen from the three cities and this will be the "setting" for the many gunners who will spend their week-ends in Kent county.

Morris L. Clothier, Philadelphia merchant, will gun from his private estate on the Sassafras river; the Royal Swan Club, composed of Baltimore, Wilmington, and Philadelphia sportsmen, will use the shores of the club property on the Sassafras river near Betterton; Betterton gunners will use the Susquehanna Flats and private shores on the Sassafras and Elk rivers, the Tri-State Pacht Club of Essington, Pa., will gun for wild geese from their shore on Worton Creek; Cedar Point Club, composed of Baltimore and Chestertown sportsmen will gun from their shore on Eastern Neck Island; a Philadelphia syndicate of sportsmen will gun from Boxer's Point shore, which it owns; Howard Taylor, Baltimore sportsman, will use Ringgold's Point Lodge; Eugene du Pont and wife shoot from the Napley shore; the Grey's Inn Point Gun Club will shoot from both Grey's Inn Point and Bogles shores on Chester river, while the Raskobs will use their Pioneer Point shores.

Ducks are beginning to come to the feeding grounds in large numbers and a small number of wild geese have been seen at their haunts. Deputy game wardens have received their instructions regarding violations of the bag limit of 15 ducks and four geese per gunner each day, and everybody is anticipating a successful season.

Why Elk's Teeth Are Taboo

The custom of wearing elk's teeth purely for ornamental purposes has drawn forth a protest from government officials. The United States biological survey has recently circulated a bulletin throughout the western states calling attention to the disastrous effect the custom was having upon the now dwindled herds of these animals. Two of these teeth cost the life of one of these interesting animals and the number of them in this country at the present time is so small that it is only a short time before they will be wiped out entirely. Thousands of elks have been sacrified to this questionable custom.

Why Heat Stimulates Brain

Making ones' head into an electric heater in order to think better and more rapidly has been successfully accomplished in Germany in recent experiments, according to Modern Mechanics Magazine. Currents were carefully applied to the living brains of men and animals by means of electrodes outside the skull. By testing muscular responses and other bodily actions it was discovered that such internal heating greatly stimulates the activity of the brain and makes other actions of the nervous system more active and effective.

Why Bakers Protested

In its campaign to persuade the people of Germany to eat more rye bread, and thus save the German farmers, the ministry of agriculture proposed a regulation compelling the bakers to use 60 per cent rye flour in all their wares. The bakers of the country, however, foreseeing the difficulty they would have in trying to sell fancy cakes and pastries made mostly of rye, rose up in denunciation. The following day the ministry of agriculture withdrew its proposal.

Why New Alloy Is Valuable

A new metal alloy which combines the lightness of aluminum with the hardness of steel has been developed at Stockholm by Johan Haerden, a Stockholm engineer. The material can be rolled and forged and is impervious to all corroding acids. In engineering and aviation circles in Sweden, it is believed that the alloy will be of great benefit to airplane manufacturers, especially in hydroplanes, on account of its resistance to salt water.

Why It Is Penknife

The term penknife, now used to mean a pocketknife, is a relic of the time when one of the uses of the knife was to mend quill penpoints.

ANNUAL HOME COMING TILT

Red Letter Day at University of Maryland for Alumni and Former Students

TWO BIG FOOT-BALL GAMES

Many Features Additional To the Games Are To Be Provided

College Park, Md.—Home Coming Day at the University of Maryland always a red letter day for Alumni and former students, is to be celebrated November 8, when Washington and Lee comes to Maryland for the annual football game with the Black and Gold of the Old Line State. Actually there will be two football games, as the Washington and Lee freshman team also is to visit College Park to play the Maryland freshmen. The game between the freshman teams will take place at 10 A. M. and the Varsity at 2.30 P. M.

Washington and Lee and Maryland have met five times in football and Maryland has won only once. In 1924, in a game in Washington, Maryland lost by 19 to 6; the next year at College Park it was defeated 7 to 3, the following year, at Lexington, it went down by 3 to 0 and the next was whipped by 13 to 7. The last game, in 1928, was won by Maryland, 6 to 0, so that actually the series has been one of the most closely contested in the history of football. The game this year is likely to be very little different from the others.

Last year the University of Virginia was met in the annual Home Coming tilt, when the teams battled to a 13 to 13 tie before one of the largest crowds ever assembled at the University.

Features additional to the game are to be provided. Members of the freshman class, aided and coached by the cheerleaders, will put on a series of stunts and comic acts between halves, ending up with their "grand pajama parade." Maryland's fifty-piece band will also furnish some good music during the afternoon and will be one of the features between halves. There will be something of interest for the Old Grads during the entire day and until midnight.

Here is the schedule of activities:

10 A. M.—Football game between Washington and Lee Freshman and the Maryland Freshmen at Byrd Stadium.

Noon—"M" Club luncheon and election of officers of the organization for another year, at the Home Economics Building.

2.30 P. M.—Varsity football game between Washington and Lee and Maryland Varsity in Byrd Stadium.

5.30 P. M.—Dinner dance in the Ritchie Gymnasium.

8.30 P. M.—Home Coming dance in the Ritchie Gymnasium.

The music will begin with the serving of the dinner to the Alumni and guests and will continue until the end of the dance at midnight.

This dinner dance is a new thing planned by the "M" Club, working with George Findlay Pollock, the assistant secretary to the Alumni Association, with a view to taking care of old graduates, their wives or sweethearts and to provide them with a place to spend their time after the close of the big game until the dance that evening.

Many of the fraternities and sororities of the University will be taking advantage of the Home Coming Day to hold open house for their members. H. C. Whiteford, of Harford county president of the Alumni Association and John B. Gray, Jr., of Calvert county, head of the "M" Club, are pulling together like a two-horse team to make the day a big success. G. Findlay Pollock, assistant Alumni secretary, and Ernest Cory, secretary-treasurer of the "M" Club, both of whom are at College Park, are busy with the details of the affair, with Geary Eppley and H. Burton Shipley, the other leaders, in perfecting the plans.

WHY

Era of Skyscraper May Be Nearing End.

If the reader is of that restless turn of mind that makes him wonder what everything will be like 100 years from now, he may have the assurance of an architect, writing in the American Architect, as to the tallness of city buildings. The prophet, who is Francis Keally, asserts that the increasing use of the airplane had doomed the skyscraper type of construction, because the extra high building is an extra hazard to safe and convenient air traffic. He visualizes cities using the tops of buildings for airplane parking, and sees the airplane as a method of transportation as common and generally utilized as the automobile today.

Business men who speed to the office today will literally fly to the office in 2030. Of course, when they decide to fly home they will not want the business of taking off complicated by 100-foot picket fence of towers. So Mr. Keally thinks there will be no skyscrapers, just mile after mile of flat-topped buildings of uniform height.

It sounds reasonable. But if the next 100 years' progress may be judged by that of the past 100, whoever makes any predictions about what the world will be like then is taking a long chance that the future will discredit him. While it is not now in sight there may, in time, be a transportation development that will make the airplane seem as old-fashioned as the ox-cart seems today.—Fort Worth Star-Telegram.

Stewardship

Whatever high station you may be placed in by fortune, remember this, that God will not estimate you by the office, but by the manner in which you fill it.—Channing.

Dr. Fred B. Smith, Chairman, Executive Committee, World Alliance for International Friendship and Moderator of the Congregational Council; organizer of the Goodwill Congress to be held in Washington, November 10-12, 1930, inclusive.

Dr. S. Parkes Cadman, Radio Minister, who will speak at the Mass Meeting of the Goodwill Congress to be held in Washington, D. C., November 10-12.

Dr. John R. Mott, of New York, who will give the closing address of the Goodwill Congress to be held in Washington, D. C., November 10-12, inclusive.

Rt. Hon. Arthur Meighen, former Prime Minister of Canada, who will speak at the International Nigh Banquet of the Goodwill Congress of the World Alliance for International Friendship, to be held in Washington, D. C., November 10-12.

ligious faiths and political affiliations. It is the belief of the World Alliance that the task of transforming the world from a militaristic philosophy to one of goodwill and peaceful methods is essentially a moral issue, and not one of machinery primarily. The friends of this ideal are enlisted in this service and accorded the utmost liberty of expression of their particular views in reference to method of securing world peace.

Father—Now, I want to put a little scientific question to you, my son. When de kettle boils, what does the steam come out of the spout for?

Son—So that mother can open your letters before you get them-

Butterscotch — Tell me, who was braver than Lancelot, wiser than Lincoln, witties than Mark Twain, and more handsome than Apollo?

Milktoast—Say, I didn't know you knew my wife's first husband?

"Can you imagine anyone going to bed with their shoes on?"

"Who does that?"

"My horse."

NEW CHEVROLET FOR 1931

Definite assurance that Chevrolet will introduce a new car for 1931 on Saturday was revealed in Cleveland, Ohio, November 3rd, during the staging by Chevrolet factory officials of the first of fifty dealer meetings to be held in the next five weeks throughout the country. Included in a carload of equipment brought in for the meeting was a new car substantially bigger than the current model, and extensively changed in appearance.

Although the meeting was closed to the public, it was learned that H. J. Klingler, vice-president and general sales manager of the Chevrolet Motor Co., who attended the meeting there, told the 500 dealers and associated bankers in attendance at the City Auditorium that the car would be publicly announced the coming Saturday, and that despite its increased size and improved appearance, it would be priced considerably below current levels.

Dramatic incidents attended the presentation of the car. It was trucked under canvas from the freight shed to the stage of the Auditorium, and there, boxed in by velvet drops and under a flood of spotlights, disclosed to the audience.

A burst of applause greeted the unveiling of the car, and when the announcement of new lower prices was made, a wild cheering dealer group interrupted proceedings for several minutes.

The car is longer than the present Chevrolet, and changes and refinements are so extensive that it has a decided "big car" appearance, one dealer reported.

If the sentiment among the dealers is any criterion, the new car ought to prove the most successful product in the history of the company.

Elixicie—Ah sho does habe bad duck.

Licorice—Shucks, you don' know what bad luck am. Las' night Ah dreamt Ah wuz walkin' longside a lake ob gravy an' dey wasn't a bisbit in 50 miles!

Mrs. Goof—Your husband told my husband that his word at home was law.

Mrs. Peck—Oh, yeah Well, it's one of those laws that's never enforced.

Mr. Musch (factiously)—This steak is like a day in June.

Landlady (crustily)—And your bill is like March weather—always unsettled.

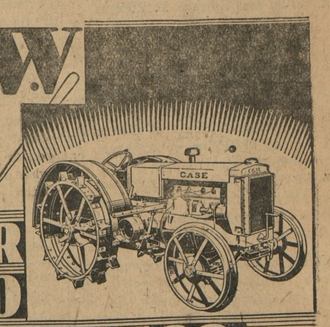
NEW



POWER
SPEED
USEFULNESS

WE have seen many tractors in our experience, but never before anything that comes even close to approaching the new Case Model "C" Tractor.

Est. 1842

Here you have every advantage to make tractor farming still more profitable. You have power to pull 2-3 plow bottoms, a small to medium size thresher with all attachments, or other machines of like capacity. You have compactness and light weight. The tractor stands only 48 inches high, weighs but a trifle more than two draft horses. You have three forward speeds, 2⅓, 3⅓ and 4½ miles an hour.

Because of these advantages, there is practically no limit to the versatility of the Model "C". You can use it for more different kinds of work—more days in the year. You can take it into the field when a heavier machine would be useless. You can speed up every farm operation. Not least in importance, you can get into corners and tight places, because the tractor turns short and with far more ease than is customary.

Never before have you been able to get a tractor with this combination of power, light weight, size, speed and ease of handling. By all means, come in and look it over.

Plows, Harrows and many other tillage tools.

Farmal Prices REDUCED!

We have just received a big piece of power farming news—the McCormick-Deering FARMALL price has been cut $50, and we are at once passing the information on to our customers. The Harvester Company's announcement says:

"We are glad to be able to make a reduction in the FARMALL tractor price at this time because right now the farmer is seriously in need of anything that will help him to cut down his costs of crop production.

"Due to manufacturing economies and anticipated reductions in material costs, we were able to reduce prices on the McCormick-Deering implement lines, effective for the present season.

"Recently, by the same process, we lowered the price on the 10-20 McCormick-Deering tractor $40, and cut the 15-30 tractor price $75.

"Now, to complete our program of reductions, we announce a $50 cut in the price of the FARMALL.

"These price reductions, made during recent months, mean a saving to farmers of millions of dollars.

"As the original all-purpose tractor the McCormick-Deering FARMALL has won tremendous popularity. More than 100,000 FARMALLS have been built. Already this tractor has created a real revolution in farming. It is the best investment a farmer can make.

"The new price, $825 f. o. b. Chicago, is the lowest ever placed on the FARMALL."

You have probably seen the FARMALL Tractor at work. If not we will demonstrate it at any time, on any job. The FARMALL replaces 6 to 10 horses and 2 to 3 men. It plows 7 to 9 acres a day—double disks 18 to 25 acres—drills up to 45 acres—plants 24 to 46 acres—cultivates 33 to 50 acres and, in later cultivatings, 50 to 65 acres. It handles every farm power job, including row-crop operations. Put the best tractor power to work now—at the new FARMALL price!

If it isn't a McCORMICK-DEERING, it isn't a FARMALL
