3 BROADCASTING PROGRAMS UNDER SINGLE CONTROL

Bell System Announcer Has Hands Full Managing Complex Switching Devices.

A trend which radio broadcasting may assume in the future is indicated by a piece of special equipment in the announcer's booth at WEAF, the Bell Telephone System broadcasting station in New York City. This device controls not only the announcer's microphone but the broadcasting operations for three stations.

The announcer for WEAF is seated before a mahogany desk upon which stands a complex switchboard. Code letters indicate the function of each of the numerous cam switches. It is the nerve center of the station, providing for the gathering of programs from many points and their distribution through stations in New York, Washington, D. C., and Providence, R. I., and also additional points on special occasions.

The programs for WEAF are rendered not only at many different points, such as theatres, hotels and auditoriums, but are also distributed to several broadcasting stations. Occasionally special programs are rendered from one particular station while another program is rendered for the other two.

Switches on the announcer's switchboard panel provide for the many complex operations necessary to cover and exchange these programs as desired. For instance, when WEAF'S announcer states "the next voice you will hear is our announcer at Kansas City, who will introduce the speaker of the evening," he himself operates a cam switch which transfers the program to the distant city.

Added to the task of controlling the source and distribution of programs, he has the complex task of announcing for several stations simultaneously. He switches his own announcing microphone so that his words are radiated only through the Chesapeake and Potomac Telephone Company, WJAR, Providence, R. I., or WCAP, Washington, D. C., or WEAF singly or any combination of two or all three simultaneously as required by the character of the announcement.

The switching arrangements suggest something of the character which radio broadcasting may assume in the future. It may be that several programs will be rendered at different points and supplied to a switchboard where they will be routed and re-routed and interchanged to local and distant stations as ordered by program managers. In this way, each station, no matter what its location, may balance its program according to the local requirements and be certain of the highest grade of talent.

"Selling" Telephone To Washington Wasn't Easy.

When George C. Maynard introduced the telephone into the city of Washington in 1877 and 1878, Pennsylvania avenue was not lined on both sides with crowds waiting to see him and to hail the coming of a new day for the methods of work and government and social life in the capital of the country. The telephone had to talk its way into the residences and the offices of this community as of every other. Mr. Maynard circularized the city, and then had a solicitor, Warren Choate, help him call on possible subscribers individually. This was during the administration of President Rutherford B. Hayes. One of Mr. Choate's daily reports to his chief gives a very vivid idea of what the introduction of the telephone into Washington really was like.

"Executive Mansion; not in. John O. Evans; order inclosed. C. F. Peck, evidently misunderstands the spirit of the exchange; you ought to see him sometime and disabuse his mind. Senator Windom, I called but he was out; left circular and asked the ladies to examine it; promised to call again. George Taylor, will order it after the holidays; must show you the plan of his home. Dr. Busey, will order it; wants Georgetown communication especially; has talked with several of the physicians about it, and they are generally going to take it; have you seen about a line between Children's Hospital, west, between 12th and 13th streets? They are talking of having one."

THE TELEPHONE IN FRANCE.

The people of France are not frequent users of their government telephone system. The number of telephones per one hundred of population in France is only one-tenth the corresponding number in the United States; and statistics indicate that the average French family uses the telephone only once a week.

On August 31, 1923, the total number of Bell owned telephones in service in the Bell System was 10,021,983, a gain of 815,581 telephones in twelve months.

New York City has over five times as many telephones as all of Russia and nearly twice as many as the whole of France.

FRENCH COPYING METHODS OF U. S. FOR TELEPHONES

Have Only One Instrument To Seventy-six People, Against One To Seven Here.

French long-distance telephone lines are now being constructed on American principles, says M. Paul Laffont, Under-Secretary of State for Posts, Telegraphs and Telephones, in an interview recently published in the Paris edition of the New York Herald.

M. Laffont pays high tribute to the excellence of American telephone methods, and admits that in France "there is no 'universal system on a no-delay basis.'" He attributes the inferiority of the French Government-owned telephone system to scarcity of funds, pointing out that "it has never had sufficient appropriations, and these were allotted for the period of the fiscal year."

A financial organization of the Department of Posts, Telegraphs and Telephones has, however, been voted by the Chamber of Deputies and the Financial Committee of the Senate. M. Laffont expresses the opinion that, under the new arrangement, "the postal administration will in future act on practical business principles," and that the realization of its development program "will practically remedy the present deficiencies of the French telephone system."

According to the latest available figures, however, France has only one telephone for every 76 persons, as compared with one telephone for every seven people in the United States.

ENGLISH EDITOR LAUDS AMERICA FOR TELEPHONES

Declares Government Owned System At Fault For Poor Service.

"'They do things better in America' is a remark which would appear to be capable of special application to the telephone service," says a recent editorial in the Northern Daily Mail, of Hartlepool, England.

The Hartlepool paper quotes at some length from an article in the London Morning Post, "contrasting the 'austere aloofness' of (the British) State-operated department with the more business-like methods obtaining across the Atlantic." The American service is praised for making installations promptly, and for more considerate treatment of subscribers whose payments fall into arrears.

"Another feature of the American system," says the Northern Daily Mail, "is that of 'appointment' calls over long distance lines. In this country one may waste both time and money telephoning to a distant town only to find that the person sought is not in. The Bell Company in America deals with this difficulty in a special manner, the operator arranging an appointment.

"We fear that we are a long way from attaining to facilities such as this," the English paper remarks; and it adds, in conclusion: "As the Morning Post observes, our system, 'like the majority of State-operated departments, is devoid of imagination, elasticity, and appreciation of public feeling.'"

PHONE OPERATOR OUTWITS BANDITS

Sounds Fire Alarm When 1300 Wires Are Cut.

Hoopestown, Ill.—The heroism of Mrs. Addie Farrell, night operator at the telephone exchange here, saved this city from an organized bandit raid.

Nine yeggs in two autos entered the town after midnight, cut 1300 telephone lines and started to blow the safes in the two banks and the postoffice.

When her lines were cut, Mrs. Farrell realized something was wrong and turned in a general fire alarm, which brought crowds of citizens to the streets.

Pajama-clad crowds joined firemen and police in a dash on the robbers, who finally escaped to wooded hills.

Uses Telephone To Beat Jump In Auto Tire Price.

That the telephone, as a selling medium, is indispensable to the modern business man was illustrated recently in a large wholesale house in Saginaw, Michigan.

The manager of the concern received a telegram on a Sunday morning that on Monday morning the price of tires would increase fifteen per cent. He immediately placed telephone calls for all the retailers in his district, which comprises all of the central part of Michigan. He was astounded at the prompt manner in which connections were made and upon summing up the business, he found that he had sold $21,000 worth of tires in just a few minutes, which, he declared, was the largest day's business the Saginaw office had ever done. A selling campaign by long distance was immediately planned by the manager.

CAUTION
