WHEN I HAVE TIME.

When I have time, so many things I'll do
To make life happier and more fair
For those whose lives are crowded now with care.
I'll help to lift them from their low despair,
When I have time.

When I have time the friend I love so well
Shall know no more these weary toiling days;
I'll lead her feet in pleasant paths always,
And cheer her heart with works of sweetest praise,
When I have time.

When you have time! The friend you hold so dear
May be beyond the reach of your sweet intent;
May never know that you so kindly meant
To fill her life with sweet content,
When you had time.

Now is the time! Ah, friend, no longer wait
To scatter loving smiles and words of cheer
To those around whose lives are now so dear;
They may not meet you in the coming year—
Now is the time.

—Indianapolis News.

GREAT INVENTIONS OF TRIRTY YEARS.

Inventions of the first order have been very numerous during the past thirty years. The decade 1866-76 marks the beginning of the most remarkable period of activity and development in the history of the world. The American Woodworker numerates the following as the most important of these: The perfection of the dynamo and its twin brother, the electric motor, by Wilde, Siemens, Varley, Wheatstone, Farmer, Gramme, Brush, Weston, Edison, Thomson, and others brought the great development of the electric light and electric railways. Then appeared the Bessemer process of making steel, dynamite, the St. Louis bridge, Westinghouse air brake, and the middlings purifying and roller processes in milling. That great chemist, Louis Pasteur, added his work to this period; the Gatling gun appeared; great developments were made in ice machines and cold storage equipments; machines for making barbed wire fences; compressed air rock drill and the Mont Cenis tunnel; pressed glassware; Stearns' duplex telegraph and Edison's quadruplex; the cable car system of Hallidie and the Janney car coupler; the self-binding reaper and harvester, the tempering of steel wire and springs by electricity; the Low process for making water gas; cash carriers for stores, and machines for making tin cans.

With the next decade, 1876-86, there arose a star of the first magnitude in the constellation of inventions. The railway and telegraph had already made all people near neighbors, but it remained for the Bell telephone to establish the close kinship of one great talkative family, in constant intercourse, the tiny wire, sentient and responsive to the familiar voice, transmitting the message with tone and accent unchanged by the thousands of miles of distance between. Then come in order the hydraulic dredges; and Mississippi jetties of Eads; the Jablochkoff electric candles; photography by electric light; the cigarette machine; the Otto gas engine; the great improvement and development of the typewriter; the casting of chilled car wheels; the Birkenhead and Rabbeth spinning spindles, and enameled sheet iron ware for the kitchen. Next the phonograph of Edison appears. In this decade we find the first electric railway operated in Berlin; the development of the storage battery; welding metals by electricity; passenger elevators; the construction of the Brooklyn bridge; the synthetic production of many useful medicines, dyes and antiseptics from coal tar products, and the Cowles process for manufacturing aluminum.

In the last decade, 1888-96, inventions in such great numbers and yet of such importance have appeared that selections seem impossible without doing injustice to the others. The graphophone; the Pullman and Wagner railway cars and vestibuled trains; the Harvey process of annealing armor plates; artificial silk from pyroxyline; automobile or horseless carriages; the Zalinski dynamite gun; the Mergenthaler linotype machine, moulding and setting its own type, a whole line at a time, and doing the work of four compositors; the Welsbach gas burner; the Krag-Jorgensen rifle; Prof. Laugley's aerodrome; the manufacture of acetylene gas from calcium carbide; the discovery of argon; the application of the cathode rays in photography by Roentgen; Edison's fluoroscope for seeing with the cathode rays; Tesla's discoveries in electricity and the kinetoscope, are some of the modern inventions which still interest and engage the attention of the world, while the great development in photography and of the web perfecting printing press, the typewriter, the modern bicycle and cash register is so great as to defy measurement.

As a remedy for roup in its first stages try burning tar and turpentine in the poultry house after the fowls have gone to roost.

A penny is a handy thing to use in scratching paint from a pane of glass. It will not scratch the glass, and most other metals will.

When the manure is hard and a portion is white it indicates a healthy condition of the digestive organs.

Brush all the sashes with a small whisk broom.

CASTORIA

The fac-simile signature of Chas. H. Fletcher is on every wrapper.

CASTORIA

BURIAL PLACES AND CAUSES OF DEATH OF OUR PRESIDENTS.

From the Medical Examiner and Surgical Reporter.

1. George Washington died from a cold which brought on laryngitis; buried on his estate at Mount Vernon, Va.

2. John Adams died from senile debility; buried at Quincy, Mass.

3! Thomas Jefferson died from chronic diarrhea; buried on his estate at Monticello, Va.

4. James Madison died of old age; buried on his estate at Montpelier, Va.

5. James Monroe died of general debility; buried in Marble Cemetery, New York City.

6. John Quincy Adams died of paralysis, the fatal attack overtaking him in the House of Representatives; buried at Quincy, Mass.

7. Andrew Jackson died of consumption and dropsy; buried on his estate, the Hermitage, near, Nashville, Tenn.

8. Martin Van Buren died of catarrh of the throat and lungs; buried at Kinderhook, N. Y.

9. William Henry Harrison died of pleurisy, induced by a cold taken on the day of his inauguration; buried near North Bend, Ohio.

10. John Tyler died from a mysterious disorder like a bilious attack; buried at Richmond, Va.

11. James K. Polk died from weakness, caused by cholera; buried on his estate at Nashville, Tenn.

12. Zachary Taylor died from cholera morbus, induced by improper diet; buried on his estate near Louisville, Ky.

13. Millard Fillmore died from paralysis; buried in Forest Hill Cemetery, Buffalo, N. Y.

14 Franklinn Pierce died of inflammation of the stomach; buried at Concord, N. H.

15. James Buchanan died of rheumatism and gout; buried near Lancaster, Pa.

16. Abraham Lincoln, assassinated by J. Wilkes Booth; buried at Springfield, Ill.

17. Andrew Johnson died from paralysis; buried at Greenville, Tenn.

18. Ulysses S. Grant died from cancer of the throat; buried in Riverside Park, New York City.

19. Ruthford B. Hayes died from paralysis of the heart; buried at Fremont, Ohio.

20. James A. Garfield, assassinated by Charles J. Guiteau; buried at Cleveland, Ohio.

21. Chester A. Arthur died from Bright's disease; buried in Rural Cemetery, Albany.

CURIOUS FACTS ABOUT THE TOAD.

The toad lives ten to forty years, does not begin to produce young until the fourth year, but then lays over one thousand eggs a year. It has lived two years without food, but cannot live long under water. It never takes dead or motionless food. It takes its food by means of its tongue alone, and it operates this so rapidly that the eye cannot follow its motions. It captures and devours mostly bees, wasps, ants, beetles, worms, spiders, snails, bugs, grasshoppers, cricke's, weevils, caterpillers, moths, etc. The stomach that doesn't flinch at yellow jackets, wasps, blister beetles and click beetles or pinchbugs, would seem to be prepared for anything in the insect line, and it doubtless is. In 24 hours the toad consumes enough food to fill its stomach four times. A single toad will in three months devour over ten thousand insects. If every ten of these have done one cent damage, the toad has saved ten dollars. Evidently the toad is a valuable friend to the farmer, gardener, and fruit-grower, and can be made especially useful in the greenhouse, garden and berry patch.

When the edge of the comb and wattles are of a purplish red and the movements sluggish there is something wrong.

DISEASE GERMS IN SOILS.

H. W. Wiley, in Jour. Frank. Inst.

It has been observed in France that, in localities where animals are interred which have died of charbon, the germs of this infectious malady persist in the soils for many years, and that, especially when cereal crops are cultivated upon such soils, there is great danger of contaminating healthy cattle with the same disease. In one case it was observed that many sheep which were pastured in a field in which, two years before, a single animal which had died of charbon was buried were infected with the disease and died. In like manner, it is entirely probable that the germs of hog cholera may be preserved in the soil for many years, to finally again be brought into activity which may prove most disastrous for the owner of swine. Every effort should be made by agronomists to avoid infecting the soil by carcasses which are dead from any zymotic disease.

Cremation is the only safe method of disposing of such infected carcasses. The investigations of scientists have shown that there are many diseases of an infectious nature due to these germs, and that these germs may preserve their vitality in the soil. Among others may be mentioned yellow fever and tetanus, and the microbe producing the bubonic plague, which retains its vitality in the soil, and thus escapes entire eradication.

For the reasons given above, the agronomist, who also has at heart the health and welfare of man and beast, can hardly look with favor upon any of the plans which have been proposed for the use of sewage from large cities for irrigation purposes. There is scarcely a time in any large city when some infectious disease due to the activity of germs does not exist, and the sewage is liable at all times to be contaminated therewith.

ANCIENT EXTRAVAGANCE.

From the San Francisco Chronicle.

The great display of jewels by women of fashion on both sides of the ocean has been senerely criticised, even by those who could well afford to wear them if they desire to. But if the precedent of history furnishes any justification for this fashion, the jewelwearers of the present day are thoroughly justified. According to Pliny, Lollia Paulina, the wife of Caligula, wore on her head, arms, neck, hands and waist, pearls and emeralds to the value of one million six hundred and eighty thousand dollars. Faustina had a ring worth two hundred thousand dollars. Domitia had one worth three hundred thousand dollars, and Kæsonia had a bracelet worth four hundred thousand dollars. Seneca bewails that one pearl in each ear no longer suffices to adorn a woman; they must have three, the weight of which ought to be insupportable to them. There were women in ancient Rome whose sole occupation was the healing of the ears of the belles who had torn or otherwise injured the lobes with the weight of their pendants. Poppæa's earrings were worth seven hundred and fifty thousand dollars, and Cæsar's wife, Calpurnia, had a pair valued at twice that sum. Marie de Medicis had a dress made for the ceremony of the baptism of her children which was trimmed with thirty-two thousand pearls and three thousand diamonds, and at the last moment she found it was so heavy she could not wear it and had to get another. But men led in the splendor of the middle ages, and Philip the Good, of Burgundy, often wore jewels valued at two hundred thousand dollars. When he walked along the streets the people climbed over each other to look at him. The duke of Buckingham wore a suit at the Court of St. James which cost four hundred thousand dollars. The dress of the nobles during the middle ages was literally covered with gold and precious stone.

SIMPLE INTEREST RULES.

From the National Educator.

Four per cent.—Multiply the principal by the number of days to run; separate the right hand figures from the product, and divide by 9.

Five per cent.—Multiply by number of days, and divide by 72.

Six per cent.—Multiply by number of days; separate right-hand figure, and divide by 6.

Seven and three tenths per cent.—Multiply by number of days and double the amount so obtained. On $100 the interest is just two cents per day.

Eight per cent.—Multiply by number of days, and divide by 45.

Nine per cent.—Multiply by number of days; separate right-hand figure, and divide by 4.

Ten per cent.—Multiply by number of days, and divide by 36.

Twelve per cent.—Multiply by number of days; separate right-hand figure, and divide by 3.

The San Jose scale is proving very injurious to fruit trees and nursery stock in many parts of the middle and eastern states heretofore free from it.

Wipe the windows hard with a dry cloth.

RULES FOR HOME EDUCATION.

From the Christian Observer.

Never give your children anything because they cry for it.

Teach them that the only sure and easy way to appear good is to be good.

If you tell a child to do anything, show it how to do it, and see that it is done.

Never let them see that they can vex you or make you lose your self-command.

Never smile at any of their actions of which you do not approve, even though they are amusing.

Never promise them anything unless you are sure that you can give them what you promise.

Always punish your children for willfully disobeying you, but never punish when you are angry.

On no account allow them to do at one time what you have forbidden, under the same circumstances, at another.

Unite firmness with gentleness. Let your children always understand that you mean exactly what you say.

If they give way to petulance and temper, wait till they are calm, and then reason with them on the impropriety of their conduct.

Remember that a little present punishment, when the occasion arises, is much better than the threatening of a greater punishment should the fault be re ewed.

When the fowls are restless and constantly picking their feathers they are infected with vermin.

Wash sashes with a cloth dipped in warm water.

Have clean water to wash glass; never use soap.

Tried Friends Best.

A Word with You.

It is worth your while to give attention to some reasons why you should be a reader of THE PHILADELPHIA PRESS.

THE PRESS is the greatest home newspaper of the United States. Its record of each day's events, in all parts of the world, is more complete than that of any other paper. It has no space for sensationalism or anything tending to lower the moral tone.

No other Philadelphia paper has equal facilities for obtaining prompt and accurate reports of news events, wherever they may occur. Reporters for THE PRESS are in every section of Philadelphia every day; special correspondents of THE PRESS are stationed at every county seat and important town in Pennsylvania, New Jersey, Delaware and Maryland, and at every news center in the United States and the old world.

No other Philadelphia paper equals THE PRESS in its special departments—the woman's page; the literary page; the market page; the pages devoted to church news, society news, G. A. R. news, school news, sporting news, etc.

THE PRESS is an advocate of the principles of the Republican party, but it prints the news of all political events more fully than any other paper; hence THE PRESS should be your paper, no matter what your political opinions are, if you wish to be well informed. In a word, THE PHILADELPHIA PRESS prints all the news all the time.

Send in your address. Sample copy of THE PRESS will be mailed free. If you are fair-minded you will read it regularly.

THE DAILY PRESS is mailed to subscribers for $6.00 a year (50 cts. a month), payable in advance; THE SUNDAY PRESS, $2.50 a year; THE DAILY and SUNDAY PRESS, $8.00 a year (70 cts. a month); THE WEEKLY PRESS, $1.00 a year. A liberal commission is allowed to persons who solicit subscriptions or to persons who will place THE PRESS on sale in localities where there are no agents. Address "THE PRESS," Philadelphia. nov-6-3y

Wall Paper! Wall Paper!

I wish to call the attention of my friends and the public in general to the fact that I now am ready to show one of the

Finest and Cheapest Lines of WALL PAPER

ever exhibited in this county, bought direct from the factory, in full bundle lots, so you get it only from second hands, as two or three profits coming off it. Of course the consumer pays them all. Sam Jones says it takes a printer pup nine days to get his eyes open. I have known some people to get their's open in fifteen minutes in a wall paper deal. They thought it was two pieces instead of one, and the border they did not understand, &c. That is always their plea. Remember I am the only paper hanger in the county that carries a stock and don't have the expense of running a store, therefore I have no opposition. If you think I can't save you money, come and see me and bring size of your room, or send size by mail and I will tell you what your job will cost, and send samples and convince you that Gladhill's is the place to save twenty-five cents on a dollar in wall paper.

L. GLADHILL, jan-28-tf Westminster, Md.

F. A. Sharrer & Son

Undertakers and Cabinet-Makers
